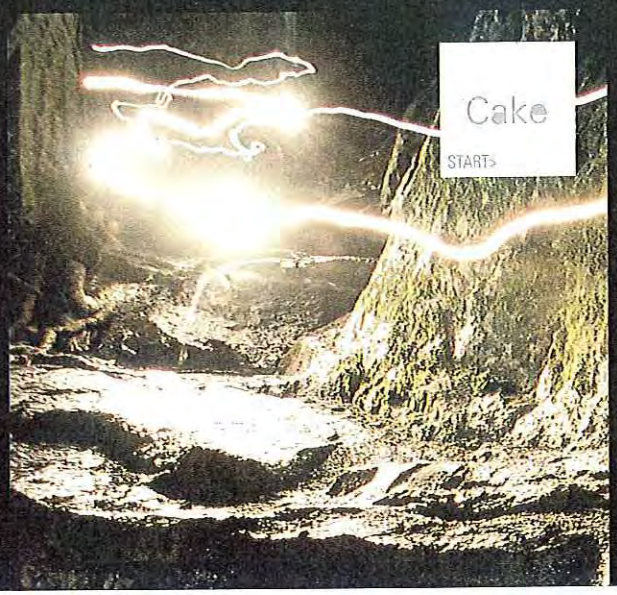
BIKES

THE 1ST AND LAST NAME IN MOUNTAIN BIKING.



Light meets all-mountain. We bake each Cake from scratch using Genesis Geometry, a low-maintenance single-pivot design, and the Manitou Swinger SPV Shock for an efficient pedaling platform. That's why Cake is irresistible. That's also why it's the lightest and most efficient all-mountain bike available.

CAKE DLX bikes feature 5" front and 5" rear wheel travel for incredibly light and efficient, yet slightly more burly, all-mountain performance.

Built to go down. Built to go off. Fisher Freeride — efficient and evil-genius tough. Built for anyone who insists on riding stuff that has no good business being ridden.

Gary's fascination with gravity began the moment he pointed his first Klunker down a fire road on Mt. Tam. Before mountain biking became so structured with start lines and gold medals there was nothing but freeriding. Gary is probably lucky he didn't have big suspension back in those days, he might not be the old man of mountain biking if he did.

BIGG'NS STORY

It's a beautiful thing to see the tangents the world of mountain bikes has taken over the years. Dirt, vert, urban, trail, free. Gary's Bigg'ns hardtails are meant to be the Jack-of-all-trades bike for the hardcore. Designed to do everything well. You name it, Bigg'ns rides it.

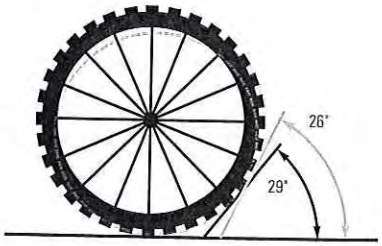
29ER STORY

Gary Fisher is wise about size. Once upon a time he realized that increasing the size of a wheel effectively decreases the size of all obstacles. The 29er was born. By increasing wheels by three inches, Gary created bikes that are less affected by dips, bumps, and soft terrain. They also help maintain speed and lower the rider's center of gravity in relation to the wheels, making for an exceptionally stable ride. And a study by Pepperdine University found that 29" wheels ride 6% faster on uphill courses and 3% faster on cross-country courses than their 26" cousins. All things considered, Fisher 29ers are pretty cool. Pretty cool, indeed.

29" wheels are versatile. Dirt. Asphalt. It really doesn't matter. Fisher 29ers let you turn a great mountain bike into a great city/path bike by simply swapping 700c road tires onto the 29er wheels. Yep — standard road tires fit like a glove. Or like a tire should.



29" wheels decrease your angle of attack. Why should you care? Decreasing the angle of attack lets you roll over obstacles faster, smoother, and easier than you can with smaller wheels.

29" wheels create a longer tire contact patch. To make a longer-contact-patch story short, this helps you float through mud, sand, and snow. Not getting bogged down helps you maintain your momentum. Which is a good thing.

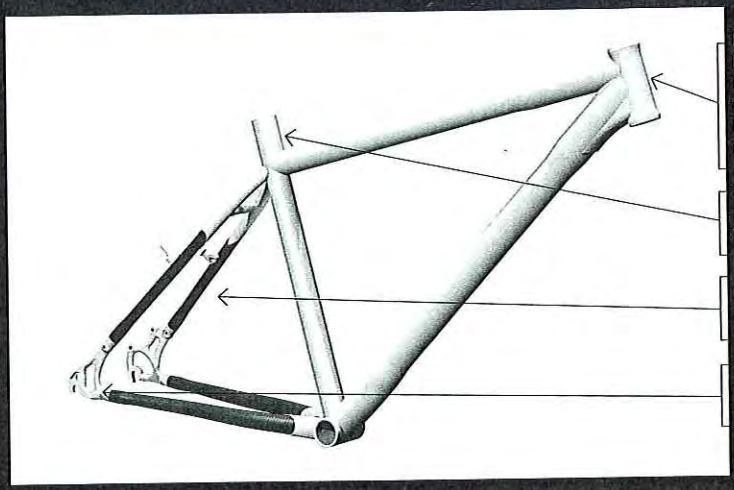
Engineered for those who demand an honest, undiluted connection to the trail, these bikes are the ultimate evolution of a beautifully simple design. All new for 2005, Fisher Hardtails improve on perfection with two platforms: Platinum Series Aluminum and Aluminum Carbon Damping Composite (AC/DC) frames.

↑ ZIGGURAT

FRAME AC/DC ZR9000 internally and externally butted aluminum main frame w/carbon composite seat and chainstays | Genesis Geometry **WHEELS** Bontrager Race disc-compatible wheelsystem w/OSB rear | Bontrager Jones XR 26x2.25 front/26x2.2 rear tubeless-ready tires **SUSPENSION** Fox FRL w/Lock-Out | 100mm travel **COMPONENTRY** SRAM X.0 1:1 alloy rear derailleur + X-9 Trigger 1:1 alloy shifters + Shimano XT front derailleur | Bontrager Race Lite 44/32/22 crank | Avid SD-SL cartridge V brakes w/Avid FR5 levers | Shimano M520 clipless pedals **SIZES** SM (15.5") | MD (17.5") | LG (19") | XL (21") **COLOR** Silver + Metallic Black

AC/DC STORY

AC/DC? Yep. Aluminum Carbon Damping Composite. When Ryder Hesjedal (runner up in the 2003 Elite World Championships!) of the Subaru Gary Fisher Mountain Bike Team came to Gary and said "Hey, any chance I could get a little more relief for these long World Cup races, yet stay on a hardtail?" Gary said, "Hmmm." Next thing you know, we're introducing Genesis AC/DC technology. By combining an aluminum front end with a full carbon composite back end, we built a hardtail that's light, stiff, efficient, and offers saintly forgiveness from the abuse of the trail.



Front end based on Gary's all-new Platinum Series ZR9000 aluminum frame. It's got a reinforced head tube and highly manipulated main tubes that have been internally and externally butted for optimum weight and premium ride quality.

27.2mm seat post diameter allows a more forgiving ride than more rigid, larger-diameter posts.

Full carbon composite rear end dampens vibration and tunes out the small stuff that wears a rider down.

Disc-specific dropouts have been scalloped and optimized for weight savings and stiffness.

NON-DISC MODEL ALSO AVAILABLE.
SEE PAGE 45 FOR DETAILS.

GENESIS GEOMETRY

It's what makes a Fisher a Fisher. It's what creates the unmistakable "Fisher Feel." If you've ridden one, you know exactly what we're talking about: the feeling of being in control, comfortable, and confident. Of course, as any Boston fan knows, it's more than a feeling — it's about placing the rider's center of gravity in a better position for better climbing and more confident descending. Genesis Geometry can actually help make a beginning rider good, and a good rider great.

CLIMB.
By shortening the chainstays, Genesis Geometry concentrates more of your weight on the rear wheel, aiding traction.

DESCEND.
Genesis Geometry moves your center of gravity further behind the front wheel so you're less likely to go over the handlebars.

STEER.
A shorter stem requires less hand movement to steer, creating more precise maneuvering.

MAINTAIN.
Your normal riding position is maintained to keep you comfortable.

Bikes designed for women that fit right and build on a woman's strengths. Genesisters bikes refine Fisher's famous Genesis Geometry, taking advantage of a woman's lower center of gravity. Properly positioned, a rider's center of gravity is key to improved climbing and safer, more confident descents.

Road bike fast and mountain bike durable. Fisher Dual Sport bikes are a lot like the man who created them. Just like Gary, they love to wander — off road, or on. Featuring fast 700c wheels, Dual Sport bikes are light, efficient, and oh so very versatile. If you had to have only one bike, this would be the one.

Gary knows kids ('cause he still is one). Gary knows parents ('cause he still is one). He knows kids want fun and function. Parents want durability, safety, and value. Gary's kids' bikes are high performance, yet built to last, built to grow, and most important, built to be safe. With features like adjustable components, shorter-reach brakes, and a lower standover height, these bikes aren't just super fun, they're super smart too. Kids' stuff? We think not.

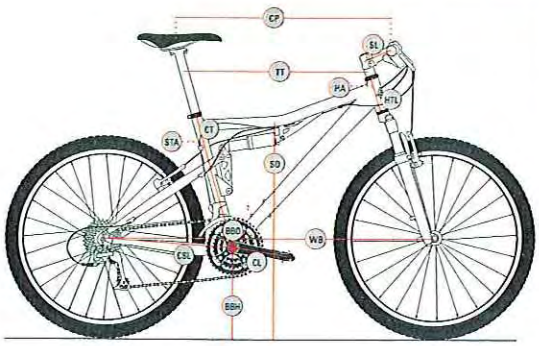
Geometry Tables



TERM	ABBR.	UNIT	GEOMETRY GLOSSARY
STANDOVER	SO	°	The vertical distance from the ground to the point on the top tube where you straddle the bike.
EFFECTIVE TOP TUBE	TT	°	The horizontal measure from the center of the headset to the center of the seatpost. The most important measurement when buying a bike, because it cannot be changed.
COCKPIT LENGTH	CP	°	The horizontal measure from the center of the handlebar to the center of the seatpost. This is where you spend your time. (The next two measurements show how it can be adjusted.)
MINIMUM COCKPIT	minCP	°	The shortest the cockpit can be made by changing the stem to the shortest one available.
MAXIMUM COCKPIT	maxCP	°	The longest the cockpit can be made by changing the stem to one which is 30mm longer than original— the maximum recommended to retain optimum handling.
STEM LENGTH	SL	mm	The original stem: measured from the center of the steerer tube to the center of the handlebar.
CRANK LENGTH	CL	mm	The distance from the center of the bottom bracket to the center of the pedal axle. A rider with long legs can benefit from longer cranks.
HEADTUBE LENGTH	HTL	mm	The distance between the upper and lower headset. Affects how high your handlebar is relative to your saddle.
HEAD ANGLE	HA	°	The angle of headtube to the ground. Tailored to optimize steering precision on each frame size.
SEATTUBE ANGLE	STA	°	The angle of seattube to the ground. Tailored to optimize power transmission on each frame size.
EFFECTIVE CHAINSTAY LENGTH	CSL	mm	The distance from the center of the bottom bracket to the center of the rear axle.
BOTTOM BRACKET HEIGHT	BBH	mm	The vertical distance from the center of the bottom bracket to the ground. Expresses clearance of the frame over obstacles.
BOTTOM BRACKET DROP	BBD	mm	The vertical distance the bottom bracket is below an imaginary horizontal line drawn through the axles. The greater the bottom bracket drop, the lower the rider's center of gravity.
WHEELBASE	WB	mm	The distance between the axles. Tailored to optimize weight distribution on each frame size.

All sizing and geometry specifications are calculated with a standard wheel size and fork axle to race. Larger air volume tires as well as different fork lengths will change the dimensions in these charts.

GARY FISHER LIMITED LIFETIME WARRANTY

Gary Fisher Bicycles provides each original retail purchaser of the bicycle a lifetime warranty against defects in materials and workmanship in the bicycle frame and rigid fork when purchased from an authorized Gary Fisher dealer. Gary Fisher Bicycles likewise warrants all original parts on the bicycle, excluding suspension forks and rear shock absorbers, for a period of one year from the date of purchase. Suspension forks and rear shock absorbers shall be covered by the stated warranty of their original manufacturers. Paint and decals are warranted for one year. This warranty is expressly limited to the repair or replacement of a defective frame, fork, or defective part and is the sole remedy of the warranty. This warranty applies only to the original owner and is not transferable. Claims under this warranty must be made through an authorized Gary Fisher dealer. Proof of purchase is required. A warranty registration card must be completed and received by Gary Fisher Bicycles before a warranty claim may be processed. This warranty covers bicycles and components outside the United States only if purchased through an authorized International Gary Fisher distributor or Gary Fisher dealer within the country of purchase.

The warranty does not cover normal wear and tear, improper assembly or follow-up maintenance, installation of parts or accessories not originally intended or compatible with the bicycle as sold, damage or failure due to accident, misuse, or neglect, or modification of the frame, fork, or components. Gary Fisher Bicycles shall not be responsible for incidental or consequential damages. Some states do not allow the exclusion of incidental or consequential damages, so the above exclusion may not apply to you. This warranty gives the consumer specific legal rights, and those rights may vary from place to place. This warranty does not affect the statutory rights of the consumer.

All photos, illustrations, colors, weights, and specifications contained in this catalog are based on the latest production information at the time of publication. Gary Fisher reserves the right to make changes at any time, without notice, in colors, materials, equipment, specifications, and models. Any variations in colors shown may be due to the reproductive variations of the printing process. Photos may include non-U.S. equipment. Some models may be shown with optional equipment.

All Gary Fisher bikes are sold exclusively through our network of Authorized Dealers who we entrust with professional assembly and service of your bicycle. Gary Fisher Bicycles extends a Limited Lifetime Warranty on every frame. Warranty duration and detail may differ by frame type and/or by country.

All specifications are subject to change without notice. Gary Fisher Mountain Bikes, Gary Fisher, the double mountain logo, Cake, Sugar, Genesisters, OCLV, sybil•link, b•link, Accessories Port, Cake 1, Cake 2, Cake 3, Cake 4, King Fisher, King Fisher 1, King Fisher 2, Bigg'ns, Ged, Bitter, Ople, Mullet, Sugar4+, Sugar 292, Sugar 293, Rig, Dual Sport, Montare, Ziggurat, Big Sur, Hoo Koo E Koo, Tassajara, Marlin, Wahoo, Advance, Tarpon, Utopia, Nirvana, Zebrano, Tiburon, Cronus, Napa, Capitola, Tyro, Cosmo, Astro, Gamma Ray, and Sun Spot are trademarks of Trek Bicycle Corporation. The following riding practices increase your risk of injury: jumping your bicycle, performing bicycle stunts, severe off-road riding, downhill riding and any abnormal bike riding. Each of these conditions increases the stress on every part of your bicycle. Frames or parts under high stress may fatigue prematurely, causing them to fail and increasing the risk of injury to the rider. Avoid these riding practices to decrease your risk of injury.
