

The birth of a bicycle...

Phil and Tim in our Product Development Department are what the MD calls "Bikies". Nuts about bicycles. As mountain bikers and occasional triathletes, they are also experts at spanner wielding – destruction tests a speciality. Their daily routine goes something like this...

"Crank spin, propelling a well muscled athlete towards the summit of the local 3000 foot peak. Out of the saddle with a happy smiling face, then back for a light breakfast before work. At lunchtime there's time enough to force in 30 minutes of rubber-burning interval training before dining on a banana and a sip of mineral water."

OK let's be real, life in the Claud Butler Development Department just isn't like that. Yes, we're keen - keen to ride for fun and race sometimes, but professional? - Not a chance!

After arriving at work and drinking serious quantities of coffee, it's up to us to check the bicycles and components in a more scientific way. Come the evening it's time to give them some abuse - mud, rocks and verbal!

As you may have noticed, we had all the mountains in Humberside levelled some years ago so it's down to the local quarries. It's a little known fact that the area around Brigg is mountain bike heaven. These quarries make the Californian Hardtrack look like Bonneville flats!

After a couple of hours of bike bashing the sweat begins to pour and faces gurn grotesquely as we climb yet another hill. No we're not crazy, we prefer to think of it as exploring the bicycles' full potential - it means plenty of close encounters with the local scenery.

At Weekends it's off to the Welsh Mountains!

We ride down Snowdon into the mist. Cold numbed fingers working hard on the brakes to slow us down, as rocks and ruts appear out of the gloom. We have to stop as our forearms refuse to work. On our next trip using Magoura hydraulic brakes we come straight down under full (almost!) control, so we specified them on the Antaeus.

If a component or frame seems to be doing well after this bike bashing trauma it doesn't stop there. We hand it over to the dreaded Fox - Destroyer of Bikes. This is an ordeal to make the toughest of bikes go wobbly at the hubs. His first set of bar ends lasted only three hours.

We test components and bikes every day almost 365 days a year. This is the way bicycles are born and developed at Claud Butler, out on the trails: riding.

Claud Butler. Real people. Real bikes.

Claud Butler and Holdsworth have over many years developed a reputation throughout the cycle industry for quality and innovation. Today this reputation continues as new bicycles are developed in line with the latest trends and fashions, using componentry from well known manufacturers such as Reynolds, Shimano, Wolber, Alesa and many more. With our 1992 range of bicycles you will discover the excellence of manufacture you have come to expect brought right up to date in styling and performance.
