Lock – Folding	17
Lock – Retractable	18
Lock – Combobox And Cable	19

Tools and Trimmings

Articulating Handlebar Mounted Tool	20
Quick Release Axle Nuts	21
Third Wheel	22

Airporter

The Dr. Hon Airporter is a semi hard-sided trolley style suitcase with plenty of protective internal padding, protective bags and component storage. It was designed to be large enough to fit most of our folded 16" or 20" bikes without removing anything and most other sized folding bikes with minimal disassembly.

Features

- Rugged straps and smooth gliding zippers for easy access
- Four built-in wheels for easy upright rolling and 360 degree turning
- Sturdy pull out handle for easy gripping when lifting over curbs or thresholds
- Internal packing pieces to wrap around and protect the frame and components
- Heavy Duty 600d cover to resist damage from punishing baggage handlers
- Dimensions: 710 mm x 880 mm x 350 mm
- Linear inches: 78" (Oversized for standard airline regulations)
- Weight: 10 kg (22 lb)

CarryCover

The Dr. Hon CarryCover is both a waterproof cover and a carrying device all in one. It makes transporting your folded bike easy, protecting you and your clothes from the inevitable road grime and bike grease. Generously padded, adjustable shoulder straps make carrying easy. Ingenious straps on the inside of the bag balance the bike's weight comfortably on your shoulder, rather than in the bag itself. "Drawstring bottom", the Dr. Hon Carry-Cover can be removed in seconds, without ever having to lift the bike. Simply stuff it into an under seat bag and you're on your way!

Features

- Covers your bike in seconds, no lifting required
- Adjustable, padded shoulder strap for comfortable carrying
- Waterproof Rip-stop PE cover protects against road grime and bike grease
- Large enough to hold almost all bikes up to 20" wheels
- Lightweight CarryCover stores compactly in a small seat bag

Carry Strap

The Dr. Hon Carry Strap is a simple carrying devise for transporting your bike with ease. We designed the Carry Strap so each end of the adjustable, padded shoulder strap goes down and wraps around the frame or wheels, putting the weight of the bike on your shoulder, not in your hands. Lightweight design allows the Carry Strap to fit almost anywhere, like backpacks, seat bags or even your pocket.

Features

- Attaches to your bike in seconds without any lifting required
- Allows you to carry your bike with a comfortable, adjustable, padded shoulder strap
- High strength nylon strap will fit almost all folding bikes
- Lightweight design allows the Carry Strap to store in the smallest of places

Handlebar Clutch Bag

The Dr. Hon Clutch Bag has a roomy interior with an easy access front pouch, two side pockets and a quick release latch so you can take it with you when you leave your bike (includes adjustable shoulder strap). The Clutch Bag is made of high quality polyester material with a sporty design and a reflective trim for high visibility at night. This bag connects to the Dr. Hon Luggage Truss (sold separately) via the Luggage Socket in the frame, keeping the weight of the bag off the handlebars.

Features

- Quickly removable to take it with you
- Comfortable, adjustable shoulder strap
- Reflective trim for high visibility at night
- Fits Dr. Hon Luggage Truss (sold separately)
- 5 L (305 cu inch) volume / 7 kg (15.4 lbs.) load capacity

Luggage Truss

The Dr. Hon Luggage Truss is specifically made to mount on the front of Dahon bicycles. This unique device uses the bike's frame to support your baskets and bags, not the handlebars, keeping the weight of the contents centered and stable. This super strong, high quality aluminum truss is strong enough to carry up to 9 kg (20 lbs.).

Features

- Made with super strong, high grade aluminum
- Mounts to bike frame, not the handlebars, keeping weight centered
- Includes a quick release latch for attaching baskets and bags
- Holds up to 9 kg (20 lbs.)

Top Tube (Frame) Bag

The Dr. Hon Top Tube (Frame) Bag was custom designed to fit the small frame requirements of a folding bike. This bag consists of two side compartments, one with a zipper closure and the other with a flap and hook-and-loop closure, and a top pouch with a clear cover to hold a Smartphone or GPS, all mounted to the top tube within easy reach of the rider.

Features

- Large clear pouch on top to hold Smartphone or GPS
- Mounts around top tube (Frame) so access to belongings is always within reach
- Durable Polyester fabric holds up to heavy use
- Zipper and Velcro closures to keep stuff secure, but still accessible
- Two separate compartments, each 160 mm x 100 mm x 50 mm
- Reflective trim for high visibility at night

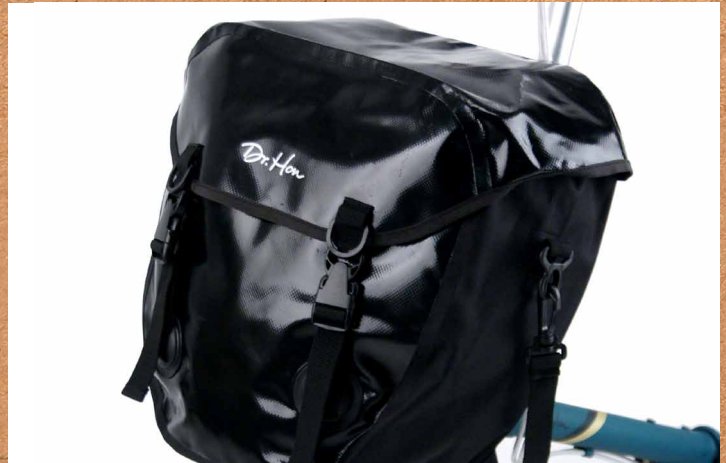

Waterproof Computer Bag

The Dr. Hon Computer Bag is a rugged, completely waterproof vessel designed to carry valuable items that must remain dry and undamaged. Its large size is perfect for the commuting professional to carry a laptop and a change of clothes or the rushing student to carry their many books and papers from class. The Dr. Hon Computer Bag has a carry handle on top and a quick release latch so you can keep your valuables with you at all times. This rubberized nylon material has sealed seams and a roll-up closure with a second pull-over cover to be extra secure and dry. This bag connects to the Dr. Hon Luggage Truss (sold separately) via the Luggage Socket in the frame, keeping the weight of the bag off the handlebars.

Features

- 100% waterproof for security in knowing contents will stay safe and dry
- Quick release latch and carry handle to easily take bag with you
- Large capacity to carry what you need for work or play
- Fits Dr. Hon Luggage Truss (sold separately)

Waterproof Smartphone Holder

The Dr. Hon Waterproof Smartphone Protection Case has a patented waterproof seal that is certified as the IPX-7 waterproof standard which will keep your device dry even if immersed into water up to 1 meter deep for 30 minutes. The clear cover allows full control of the touch screen and it has a waterproof 3.5 mm audio output connector to plug-in your headset. This bar mounted case has a swivel connection for multiple angles of mounting, plus it is compatible with iPhone 2G, 3G, 3GS, 4G 4GS, iPod Touch, many mobile phones, many GPS and most MP3 or MP4 devices.

Features

- Waterproof protection for mobile electronic devices
- IPX-7 waterproof standard
(Immersed to 1 meter for 30 minutes)
- Compatible with most Smartphones, MP3, MP4 and GPS
- Waterproof 3.5 mm audio output connector to plug-in to your headset
- Bar mounted (20-40mm clamp) with swivel connection for easy viewing
- Exterior Size: 92(W) x 158(L) x 33(H) mm
- Cavity Size: 60(W) x 130(L) x 12(H) mm
- Weight: 210 g
- Choice of colors: black or white

Handlebar Flower Vase

A uniquely designed vase provides a place for fresh (or artificial) flowers on the handlebar of your bike. This small, attractive vase has a quick release mount, so you can take it off the bike to arrange the bouquet, then simply slip it into its bracket – for beautiful fresh flowers everywhere you ride. Set of assorted vases, to hold a single stem or a whole bouquet!

Features

- Detachable vase for easy filling and cleaning
- Multiple vases for a choice of arrangements
- Handlebar mounted for constant pleasure
- Small design so it's not in your way

Mini Bell

The Dr. Hon Mini Bell has got to be the smallest bell around with a dome that is only 22 mm diameter. Its custom designed dinger can be turned 360 degrees, giving riders a variety of mounting positions and allowing them to use either their thumb or their finger to ring the bell. It also features a quick release lever so the bell can easily be taken with the rider for safe keeping. The clamp is very versatile and will fit 21.7 – 26 mm diameter handlebars. Chrome plated brass dome for that classic bell sound.

Features

- Super small size - 22 mm diameter dome
- Brass dome for classic bell sound
- Includes a quick release latch for easy removal
- Rotating dinger for multiple mounting options
- Universal fit on most bikes and easy to install

Mustache Handlebar

The Dr Hon Mustache Handlebar brings the grips and shifters up and closer to the rider. This strong, wide, looping handlebar is perfect for riders who prefer an upright riding position with the controls closer to them so they are not required to reach out as far. These mustache shaped bars are made of high grade aluminum and cold forged to the ideal shape. They can easily be adjusted forward and back to satisfy every different arm position desirable and they can lie flat when the bike is folded.

Features

- Super strong, cold forged, high grade aluminum construction
- Mustache shape to allow any arm position desirable
- 25.4 mm Diameter 580 mm Wide x 70 mm Rise

Motion Activated LED Taillight

The built-in sensor in the Dr. Hon Motion Activated LED Taillight senses motion, turning your taillight on automatically when movement occurs, and off when it stops for a period of time. Never worry again about flat batteries because you've forgotten to turn it off! Three-way, easily accessible ON/OFF/AUTO switch lets you shut-off on days when don't need it. Government approved and rigorously tested to be strong and reliable, this taillight is custom sized to fit Dahon's rear carriers and all standard sized taillight brackets.

Features

- Motion activated to conserve battery life
- LED lights for long bulb life and brightness
- Fiber optic technology for superior visibility
- Government approved "K" rating
- 3 way switch (ON-OFF-AUTO)
- Uses two AAA batteries (not included)
- Custom sized to fit Dahon rear carriers (and most others)

Lock – Combobox And Cable

The Dr. Hon Combobox and Cable Lock is long enough to protect every part of your bike and still reach around a palm tree or sign post. Both ends are designed as loops, one to hold the different parts of the bike and the other to hold something stationary to secure it. The PVC coated cable is 4.8 mm thick and 2000 mm long, but only weighs a paltry 177 g, including the zinc alloy lock housing. It has a 4 dial, resettable combination allowing literally thousands of combination choices.

Features

- 2 meter long PVC coated cable to prevent damage to your paint
- Extremely light weight for easy storage when not in use
- 4 dial resettable combination for a multitude of combination choices

Lock – Folding

The Dr. Hon Folding Circle Lock received the 2011 RedDot design award for its foldable link construction with easy Push & Lock operation. The ABS covered hardened steel plates and stainless steel rivets provide a flexible system in a compact size. Secured with a high-tech tubular cylinder for anti-picking protection, this lock is big on protection but only 70 mm in diameter and 45 mm wide. Comes complete with a mounting bracket for safe and secure storage.

Features

- Foldable link construction for flexibility yet compact size
- 3 mm thick hardened steel links covered with ABS coating
- High-tech die-cast tubular zinc cylinder
- Includes safe and secure mounting bracket

Lock – Retractable

The Dr. Hon Retractable Cable Lock is compact and portable for low risk security protection. The ABS housing holds a 900 mm long PVC coated 2.4 mm cable which can be recoiled with the push of a button. The 4 dial resettable combination offers the owner a huge selection of combination choices. This 89 g multi-purpose lock will secure bikes, quick-release components, helmets, accessories and also skis, snowboards, luggage, even outdoor furniture.

Features

- Retractable 900 mm PVC coated cable
- 1-button auto recoil convenience
- 4 dial resettable combination
- Light weight and compact at only 89 g

Dr. Hon Articulating Handlebar Mounted Tool

The Dr. Hon Articulating Handlebar Mounted Tool is a new and unique idea from Dr. Hon himself. This 145 mm long tool is made of 7000 series aluminum with a hardened steel hex head all packaged within an ABS housing. With an articulating configuration, it can be folded in two places to be a quick-turning speed tool, rotating within the housing that makes the handle. It can also be folded just once to become a 90 degree tool for strong torque and tight finishes, or not folded at all to be a straight-working driver. And when you're not using the tool, it fits neatly into the handlebar for storage until you need it again.

Features

- Light but strong aluminum construction
- Stealthily stores in the bicycle's handlebars
- Always available when you need it most
- Transforms into 3 different tools by simply folding at the joints
- Only 145 mm long

Quick Release Axle Nuts

The Dr. Hon Axle Release System is a quick release conversion for bicycles with solid threaded axles. These cam actuated nuts thread on to both ends of the axle, replacing the original nuts that were on the wheel. Each side is independently threaded onto the axle until snug and then the lever is closed to pinch the fork tightly, making for a safer quick release because the independent cams on each side of the hub will not accidentally open at the same time. A quick release axle is an added convenience when removing wheels for transport, flat repairs or mechanical breakdowns.

Features

- Easy quick release conversion for solid threaded axles
- Multiple safety features to ensure the wheels don't come loose
- Adaptable for any size thread or axle length, even cabled gear hubs
- Wrenchless convenience when removing wheels for transporting or repairs
- Aluminum/Stainless Steel Construction weighing only 85 g per set

Third Wheel

The Dr. Hon Third Wheel is a “bicycle stand” for folding bikes – especially developed to keep the bicycle balanced upright when in the folded position. This ingenious wheel gives the folded bike stability and balance when not in use, and also allows it to be rolled easily without lifting. When Dr. Hon’s Third Wheel isn’t needed, it folds up out of the way along the bottom bracket, hugging the frame. The 2.5 inch wheel is affixed to an aluminum shaft and held by a steel spring, making it very rigid when positioned for use, yet keeping it safely and out of the rider’s way when the bike has been unfolded.

Features

- Gives folding bikes extra stability when folded
- Quickly folds up and away when the bike is unfolded for use
- Strong, stable 6061 aluminum shaft with 2.5 inch wheel
- Allows the bike to roll without lifting or strain
