

Bianchi

1992 BICYCLES

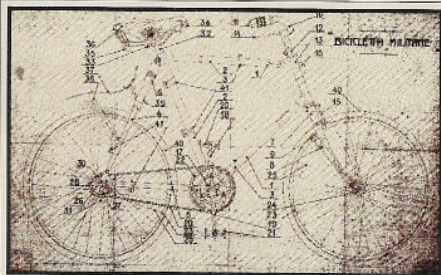

From the beginning, Edoardo Bianchi believed success was measured only by victories and victory was only attainable through innovation. No one has contributed what Bianchi has to the world of competitive cycling, and it is quite possible that no one ever will.

1885

marked a significant event in the world of cycling. That was the year Edoardo Bianchi opened the doors of the "Italian Velocipede Company" beginning a tradition of excellence unbroken to this day.

From the beginning, Edoardo Bianchi believed the racing environment was the only proving ground for his products. This led to the development of the esteemed "Bianchi Reparto Corse" or Race Department where the latest bicycle designs are produced, tested and evaluated for performance and integrity. From his first major victory in 1899, by Giovanni Tomaselli in the Paris Grand Prix (later known as the Tour de France) to countless other victories in such races as the Hawaiian Ironman, Giro d'Italia and the World Championships, Bianchi has proven many times over that it is indeed the Bicycle of Champions.

The Bicicletta Militare was built in 1915 by Bianchi for use by the Bersagliere, an elite rifle corps of the Italian Military. This is the first bicycle built with a full suspension system.

29.8

This reprint from a 1930s Bianchi catalog features an illustration of the different Bianchi headtube badge designs that were used during that period. In these days, the design was used to distinguish the various types of Bianchi bicycles.

BUGNO

Edoardo Bianchi was also an innovator. In 1888 he introduced the first bicycle with inflatable tires. In 1915 he introduced the Bicicletta Militare, the first bicycle with a full suspension system. In more recent years you will find such technologically advanced features as SuperSet 2™ tubing designed to give the rider faster acceleration and better climbing ability. Or our exclusive Hi-Wire™ cable system to keep brake and derailleur cables clean and smooth operating. Some of our innovative designs are simple answers to complex problems. For instance, by redesigning road racing handlebar stems with a 90 degree angle rather than the traditional 73 degree angle we offer increased comfort, increased strength and less weight. Lugs are another feature that set Bianchi apart. Lugs allow the use of lighter tubing, extend the butting process and permit lower brazing temperature for a more durable frame. These are only a few of the innovations that always have and always will keep Bianchi at the forefront of bicycle technology.

In this catalog we profile four people who have taken the simple act of cycling to a higher level. These people illustrate the spirit and dedication Edoardo Bianchi would appreciate. Some ride for their own well being, while another rides to better the world. Whatever the reason, they have accomplished these goals on a Bianchi. Extraordinary bicycles for extraordinary people.

The Reparto Corse, or Race Department, is at the heart of the Bianchi factory. Here, an elite group of craftsmen build, test and retest the latest in bicycle technology. Each Bianchi bicycle benefits from the lessons learned in the Reparto Corse.

1885

• Edoardo Bianchi begins production

1886

• Bianchi introduces the first safety bicycle

1888

• Bianchi introduces the first bicycle with inflatable tires

1899

• Paris Gran Prix Winner

1890

• Bianchi introduces the first motorized three wheel vehicle

1895

• Bianchi is appointed to the Royal House of Italy

1897

• Bianchi introduces the first motorized bicycle

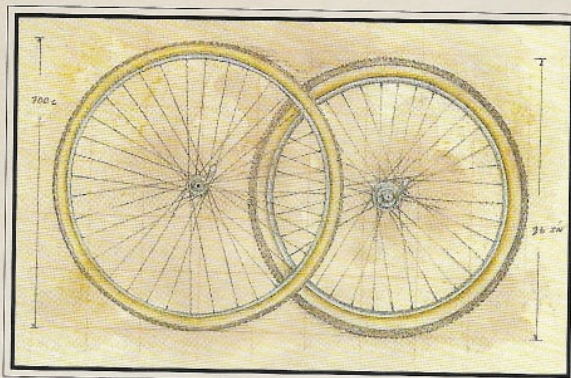

These bikes were developed as an expansion of the already successful Bianchi Cross-Terrain® models. Designed for heavy off and on-road use, these bikes have found their way onto numerous winners podiums and under many urban athletes needing high performance with strength to match.

The primary advantage is in the larger diameter wheel. The longer tire patch acts like a tank tread bridging gaps and ruts, effectively "smoothing out" the terrain.

Joe Blanco, construction

project manager Monday through Friday, races his Bianchi Project-7 on Saturday and Sunday. Last summer Joe won seven

Project/Cross-Terrain

We produce bicycles with both 700c and 26" wheels. The 26" wheel is ideal for loose, rocky terrain. However, if your riding takes you over a variety of terrains consider this: 700c wheels are superior in climbing and cross-country where the longer tire patch acts like a tank tread bridging gaps and ruts, effectively "smoothing out" the terrain.

• In a field of mountain bikes, Joe's Bianchi stands out, both in appearance and performance. To quote Joe: "Because of the larger diameter wheels, the bike rolls faster downhill. And because the footprint of the tire is longer than the average mountain bike, it's a far superior climber." In short, Joe can pick a line and stick with it on descents, and dust his opponents on ascents.

Cross-Terrain

Cindy Anderson lost 78

pounds and a total of 30 inches with the help of her Bianchi Advantage Cross-Terrain bicycle. Through a regimen of diet and exercise Cindy changed her looks, life-style and health. She says: "I liked the Bianchi Cross-Terrain bikes because I could ride on a variety of terrains and not worry about the road or surface conditions. And because they're so comfortable, I was able to exercise longer and enjoy myself." • Seven years ago Bianchi introduced the first Cross-Terrain bicycle, now there are 10 different models. All are light, fast and ergonomically designed for comfort.

The primary concept behind Bianchi Cross-Terrain bicycles is versatility. Until we developed this category, bicycles were becoming more and more "use specific." Bianchi Cross-Terrain bicycles are top performers over a variety of terrains. They are generally lighter than comparable mountain bikes and ergonomically designed for comfort.

If you are interested in a wide variety of cycling activities, and cannot afford a bike for each, then the best choice is Cross-Terrain. As Bicycle Guide magazine said, "It is the true go anywhere, do anything bicycle."

We have never designed a frame around one feature. The balance of specific frame components to accomplish a particular objective is always our goal. Chrome-moly has more desirable features per pound of material used than any other frame building material available. These attributes include strength, durability, repairability, shock absorption (dampening) and malleability. Chrome-moly absorbs shock more than 200 times better than aluminum and is not prone to catastrophic failure. It also maintains more of its original characteristics, after reworking, than any other frame material.

Road Racing

Gianni Bugno has been

rated the number one cyclist in the world for two years running. This year he has chosen to ride a Bianchi. And with team

mates like Laurent Fignon, Alfons deWolf, and Franco

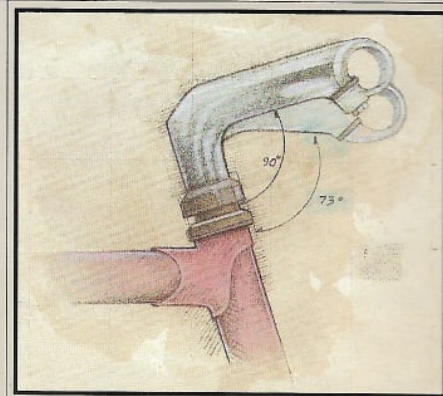

Chioccioli, he will add another chapter to Bianchi's long history of racing success. • Look for Bugno and his team mates in such classic races as the Tour de France, Giro d'Italia, Paris-Roubaix and, of course, the World Championships.

There is only one test relevant to cycling performance, and that is to test yourself. **The racing bicycle is the core of more than 108 years of Bianchi history**, and it has always been our belief that we need to build bicycles which allow the rider to perform that ultimate test.

By building bikes for world champions, we have developed an irreplaceable base of knowledge from which we are able to cull the best ideas and incorporate them into our line of racing products.

Bianchi's racing success has not come from watching the peloton pass by, but by an active involvement in the sport of bicycle racing at the highest level. One cannot separate the racing and design success. Winning will not happen without high performance design, and the designs will never occur without the understanding championship racing imparts.

Most Bianchi road bikes use our 90-degree stem. By redesigning the traditional 73-degree handlebar stem to have a 90-degree angle, we can offer increased comfort, increased strength and less weight. This stem can also be adjusted higher than conventional stems, without sacrificing safety.

Jack Allen, Doctor of

Veterinary Medicine, uses his Bianchi Ibox to benefit our planet. Each year Dr. Allen leaves his post at the San Diego Wild Animal Park to deliver a precious cargo of a few Bianchi mountain bikes to his research staff in the jungles of Paraguay. The bikes are used for transportation and to help maintain the small population of Giant Chaco Peccary. The Tangua, as it is also called, is endangered because of shrinking habitat. • Bianchi captured his attention through our Project Habitat program. For the last few years, we at Bianchi, have named our mountain bikes after rare and endangered animals to remind everyone that care should be taken when riding through sensitive habitats and to promote minimum impact cycling.

Mountain

Our exclusive Hi-Wire cable system keeps the brake and derailleur cables clean and free from water and hazards. With this system we can route the cables along the top of the bike instead of the bottom where dirt and mud accumulate. In addition, tests show this system shifts faster and smoother than conventional cable systems.

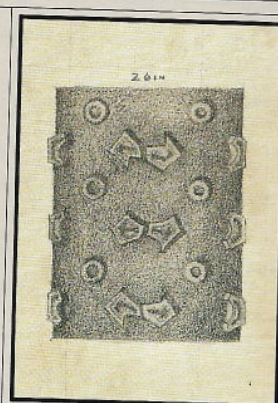

Our overriding philosophy in designing mountain bikes is characterized by our commitment to off-road performance, by concentrating frame strength in critical areas, and by utilizing industry-leading components.

The frame should have additional strength where it is necessary, but avoid additional material where it is not necessary. The proper blending of tubing diameters is one method for accomplishing this. Component selection is another area where our design philosophy is evident. Names like Tange, Ritchey, Avocet, and Araya are in abundance on most models. In this way we assure our customers consistent, high quality, no compromise equipment.

Project/Cross-Terrain

Larger diameter, 700c wheels, provide many advantages. Because of the larger diameter wheels, the bike rolls faster downhill, and because the footprint of the tire is longer than the average mountain bike, it's a far superior climber.

Cross-Terrain

Bianchi's exclusive SuperSet 2 frame design offers faster acceleration and better climbing ability at the lightest possible weight. We do this by oversizing and ovalizing the downtube as it approaches the bottom bracket. This increases side to side rigidity and decreases the uncomfortable road shock inherent in other super stiff frames.

Columbus EL Ovalized tubing throughout, chrome seatstays and chainstays, internal brake and derailleur cable routing, dual bottle mounts, Shimano semi-vertical forged drop-outs, pump peg, fastback seat stays, braze on front derailleur fitting, and engraved head tube. (headset not included)

Mountain

Bianchi's exclusive SuperSet 2 frame design increases side to side rigidity for a more efficient ride and decreases the uncomfortable road shock inherent in other super stiff frames. In addition, SuperSet 2 offers faster acceleration and better climbing ability at the lightest possible weight.

Active Wear

Just a sampling of our ever changing selection of T-shirt designs. All shirts are available in heavy weight 100% cotton. Some designs are available in cotton blend sweatshirts.

Bianchi Polo Shirts

100% cotton heavy weight fabric with ribbed collar and cuffs and embroidered Bianchi logo. Short sleeve is available in Concord, Celeste or Gray. Long sleeve in Charcoal.

Team Bianchi Race Wear

Matching outfit with CoolMax Jersey, contoured 8 panel lycra shorts, padded leather and lycra gloves, ventilated helmet cover and 100% polypropylene socks.

Celeste has been the traditional Bianchi color for over 60 years. It is a color long associated with excellence in the world of cycling. To continue this tradition, we make the following accessory items available in our exclusive Celeste collection.

Bianchi Soft Brief Case

Water resistant Cordura with three inside dividers and one large exterior pocket. It comes complete with large #10 zippers and shoulder strap.

Avocet Saddle

Leather padded racing saddle.

Silca Frame Fit Pump

One of the lightest pumps on the market.

Assorted Bianchi Water Bottles

All have push-pull tops and are imprinted with various Bianchi logos.

Water Bottle Cage

Lightweight tubular alloy.

Cinelli Cork Handlebar Tape

Used by pros the world over for its unique feel and comfort.
