

ALL TERRAIN GT

1990

1990 promises to be the most exciting cycling year ever. GT Bicycles will launch you into this new era with bicycles that combine proven technology and extraordinary new concepts.

Located in Huntington Beach, California, GT Bicycles has long been internationally recognized as an industry leader with products currently sold in over twenty countries worldwide.

GT's on-site manufacturing and assembling facilities take ideas from paper and transform them into reality. Our research/development department and product design team continue their commitment to providing you with innovative, quality products. Supporting these products is a full-time, knowledgeable and responsive customer service staff, but our commitment to cycling doesn't end in Huntington Beach. GT's five man All-Terra team has clearly established themselves on the continental off-road racing circuit and rarely comes home empty handed.

Our Triple Triangle Design has proven itself superior to conventionally designed frames and with so many of our innovative concepts now appearing on the competition's frames, we must admit that imitation is the ultimate form of flattery. With the advent of a new decade, GT introduces products that surpass anything previously offered. Our 1990 Crossover bicycles are the newest additions to the GT line. The Crossover bikes 700D wheels

will redefine industry standards and open up exciting new horizons. Alternate materials have not been overlooked, with our incomparable titanium Xizang LE now gracing the All-Terra line.

Constantly striving to remain on the cutting edge, GT Bicycles isn't afraid to be the leader. Unrivaled products and unparalleled commitment are what you can continue to expect from GT. The results of our efforts are undeniable. Just ask the competition.

GT's Triple Triangle Design frame takes advantage of smaller triangles and a new externally butted seat tube to increase strength and reduce flex. Our distinctive pierced and ovalized top tube provides more welding area in this critical high stress area. The internal cable routing system utilizes a full length tube that is hand brazed inside the top tube for a clean, professional look. For 1990, we've added our heat treated alloy seat post clamp, eliminating the added weight of reinforcement collars and brazed-on seat tabs.

While other companies have just discovered the benefits of oversize seat stays, GT's Triple Triangle Design frame has always used double tapered 19mm stays to add rigidity and eliminate brake flex. Chosen as one of the ten best inventions for mountain bikes in 1989, our GT Cable Crosser shows that the best ideas are sometimes the simplest.

At GT, bicycle designing begins with the frame. Unparalleled attention is paid to the materials, geometry, and manufacturing techniques. For 1990, our Triple Triangle Design offers improved geometry and an even lighter frame. Features you have come to expect, like our ovalized seat tube and internal cable routing, are now united with some brand-new ideas.

Our new oversize or O.S. steering system spearheads the list of frame refinements. The O.S. system begins with GT's handsome new pierced design stem. Chromoly tubing and an alloy wedge bolt allow maximum strength at the lightest possible weight. Our redesigned fork uses an oversize steering column, adding measurable strength with no weight increase. Beefy $1\frac{1}{8}$ " fork blades minimize flex and offer plenty of tire clearance. Capable of withstanding more abuse than a standard size, the new $1\frac{1}{8}$ " headset completes the O.S. system. Head tube reinforcement collars, pioneered by GT Bicycles, securely anchor the O.S. system to your All-Terra frame.

Features such as these can be found throughout the GT line and once integrated with carefully selected, quality componentry, there can be only one serious choice — GT All-Terra.

XIZANG LE

Titanium. The material once used only by NASA is now available to you in the form of a state-of-the-art Triple Triangle Design GT bicycle. Combining the most desirable physical properties of other metals, titanium offers resilience with quick, responsive handling. 60% stiffer than aluminum and 40% lighter than steel, this space-age metal resists corrosion while maintaining its natural lustre.

The handcrafted Xizang Limited Edition begins with the componentry you'd expect: Shimano Deore XT STI 21-speed group featuring Rapid-Fire SIS under-the-handlebar mounted shifters, HyperGlide cogs, SuperGlide

chainrings, and SLR braking. O.S. system featuring Tioga Avenger headset, GT pierced design O.S. stem, and Tange Prestige O.S. fork. Competition wheels with Araya RM-17 32-spoke rims, Ritchey Mega-Bite OverDrive tires, and stainless steel spokes. Tioga Prestige handlebar and seat post and GT heat-treated alloy seat post clamp. All this adds up to a bike greater than the sum of its parts.

When you own a Xizang Limited Edition titanium bike, you are assured of the finest bicycle built in North America.

The handcrafted Xizang LE frame displays flawless workmanship.

TEAM AVALANCHE

AVALANCHE

A new decade demands new ideas.

The 1990 Team Avalanche boasts our refined Triple Triangle Design frame made with Concept, Tange's finest heat-treated tubing. This super light multi-shaped tubing offers maximum responsiveness and when coupled with the new O.S. steering system — Tange Prestige fork, GT new pierced design O.S. stem, and alloy O.S. headset — ultimate performance prevails.

Shimano's exciting new Deore XT STI group provides state-of-the-art shifting technology. For superior control, the new Rapid-Fire thumb shifters are strategically placed under the handlebar. All-new SuperGlide chainrings, utilizing race-proven HyperGlide technology, complete this revolutionary shifting system.

Supported by the new GT heat-treated alloy seat post clamp, Tioga's lightweight Prestige seat post offers infinite seat adjustment. Ritchey Mega-Bite tires, Araya RM-17 rims, Tioga Prestige II handlebar, all-new GT grips and GT InstaFlate are all stock equipment on this ground missile. A Ferrari comes in red, the Team Avalanche comes in Blue Widow.

So much Terra...so little time.

Sure tracking and maximum strength is ensured with GT's O.S. steering system.

The Avalanche is back

and it's badder then ever! With geometry identical to our Team model, you'll have no trouble staying off-the-front on this Tange Prestige constructed frame and fork. Shimano's Deore DX STI group with Rapid Fire shifters, 2-finger brake levers, and round SuperGlide chainrings will propel you over any obstacle. Competition-ready 32 spoke wheels built with Araya RM-17 rims and Ritchey Mega-Bite tires conquer trails as fast as you discover them. Color selections of Lunarscape or Snowstorm make this a bike for any environment.

Don't look back.

Shimano's "Rapid-Fire" shifters are at the heart of STI's integrated performance.

KARAKORAM K2

KARAKORAM

Competition built, ready to rock and roll.

Like the mountain in the Karakoram range it's named for, the 1990 Karakoram K2 stands above its peers. This radically improved competition-bred bicycle features Tange MTB seamless tubing, Shimano Deore DX STI components with HyperGlide and O.S. steering system. The Karakoram K2's aggressive disposition is enhanced by the GT 4130 chromoly seat post, Shimano 2-finger brake levers, Ritchey Vantage rims and Mega-Bite tires. And with its Galactic Fade or Diamond Blue finish, this bike is as exciting to look at as it is to ride. Hit the road, and then head off it.

New innovations from GT include our heat-treated alloy seat post clamp, 4130 chromoly seat post and re-designed GELCEL saddle.

This classic bicycle returns

with an all-new look. GT's Karakoram boasts an impressive list of sophisticated features including the Shimano Deore LX STI group, Tioga Avenger O.S. headset, and the new GT pierced design O.S. chromoly stem. Its competition-bred geometry combined with Tange lightweight MTB double butted tubing results in a serious off-road contender. Effortless steering is provided by GT's newly redesigned fork featuring O.S. steering column, improved rake, and greater tire clearance.

GT All-Terra's own toe clips and straps, GELCEL saddle with new EM cover, Instaflate CO2 pump with regulator, and newly designed anatomical grips round out the impressive package the Karakoram presents for eager off-road enthusiasts. But we didn't stop there. With its radical Purple Haze or Classic Gloss White finish, the 1990 Karakoram has your name on it.

GT's new pierced, oversize stem offers elegance and unparalleled strength.

TEQUESTA

TIMBERLINE

By utilizing the same frame features as our legendary Avalanche, the Tequesta performs like a true off-road champion. The 21-speed SDS group features top quality components from SunTour, DiaCompe and SR. Shifting efficiency and accessibility start with SunTour's new Express under-the-handlebar mounted shifters. SR's Powering round Anti-Jam chainrings, SunTour derailleurs and cassette system complete this integrated drive system. And when it's time, the DiaCompe 3-finger levers and XCE brakes put a stop to the high-speed excitement.

Last chance! O.S. steering system, GT/Instafate CO2 pump, GT All-Terra toe clips and straps all come stock on colors that will make you all the rage — Nimbus, Fiesta and Gloss Black.

**Don't
leave
the road
without
it.**

New for 1990, the GT/Instafate is the only CO2 pump that allows regulation of tire pressure.

Of the top ten ideas of 1989, the Crosser amplifies our active braking system.

**The
ever
popular
Timberline**

takes on major improvements for 1990. The Timberline's Triple Triangle frame with seatstay mounted U-brake and internal cable routing sports a sleek, new look. It offers a low-maintenance wheel combination of Araya alloy rims, Shimano alloy QR hubs with rear cassette, and stainless steel spokes. With Shimano's new 500LX STI Rapid-Fire shifters and 21-speed HyperGlide system, changing gears has never been easier.

A comfortable ride is assured by the natural handlebar position and anatomical GT/A'ME grips. The soft GT GELCEL saddle will be appreciated at the days end.

In rock-like Granite or Gloss Red, the Timberline is not just a ride...it's an adventure.

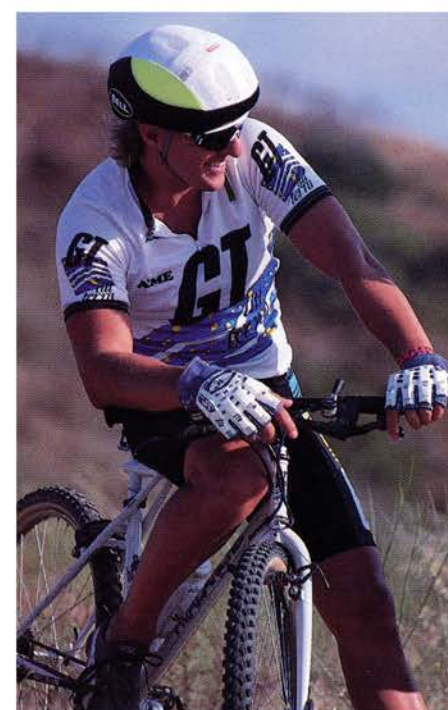

TALERA

OUTPOST

Saving money doesn't have to mean going without. The brand new 1990 GT Talera features our unique GT diamond shape frame and GT design unicrown fork. Shimano's 21-speed 200GS STI component group with Rapid-Fire shifters and HyperGlide grace this bike for all occasions. Sealed mechanisms throughout prevent mountain mud and city slime from slowing down your ride. Wheels built with Araya alloy rims, stainless steel spokes, and Shimano alloy QR hubs with rear cassette keep you rolling smoothly year after year. In Classic White or Pearl Aqua, with five mens and two ladies frame sizes.

**There's a
Talera
for
everyone.**

**More
bike
for
your
buck.**

The 1990 GT Outpost offers uncompromised quality and innumerable creature comforts. The unique GT diamond frame is complimented by Shimano's new 200GS 18-speed HyperGlide drive unit, with stopping power provided by SLR cantilever brakes and levers. Sit comfortably on GT's new Supersoft saddle and let the Araya alloy rims, off-road tires and stainless steel spokes carry you anywhere this versatile bicycle will take you. Take along the entire family for a ride. The Outpost offers five mens sizes, a 24" wheel size for junior, and two ladies sizes for mom. Black, Red or Lypstyk.

Do you enjoy the speed

of your road bike, but sometimes wish you could jump a curb, shoot through a stream, or dare we say, climb a mountain trail?

Do you like all the capabilities of your mountain bike, including ruggedness, comfort and ease of handling, but wish it wasn't such a snail on the street?

Are you still looking for one bike to fit all your needs?

While other companies claim to have bicycles designed for "crossover" situations, most of these are only marginally outfitted and suitable for primarily one riding condition or another.

Welcome to a new era in cycling. The GT line of Crossover bicycles will change cycling forever. Our goal was to create a bicycle that could be ridden both on or off-road without compromising performance on either terrain.

We started with a question. What common element limits the performance of road and mountain bikes more than any other when they are out of their natural environment? The answer is simple. The wheels.

We took the strength of a standard mountain bike wheel and combined it with the rolling distance of a road wheel

to create an entirely new wheel size — 700D. The 700D wheel marks a revolution from convention. One that works. This is a brand new rim and tire size! The rim (and inside tire) diameter is greater than that of a conventional mountain bike wheel, but less than the universally recognized 700C wheel. When mounted with

our high-profile, 1.4 slick tire, this wheel covers the same distance as a lightweight 700C wheel, yet with one quick change to our 2.0 Gila Monster knobby, it is transformed into an off-road animal. This 700D wheel will change the way you think about, and ride, bicycles.

Next came the frame. Careful consideration was used to create a frame that would excel in all situations. Our successful GT Triple Triangle Design frame built of the lightest possible tubing is combined with crossover geometry to give you a superior transition between on and off road. Complete braze-ons for fenders, rear racks, lo-rider front racks, and three water bottles have all been incorporated to complete these bicycles destined to usher you into the 90's.

Gearing was formulated to accommodate the most extreme road and off-road conditions. Equipped with the most technologically advanced components available, GT's Crossover bicycles come with attention paid to every detail.

The 1990 Crossover line of bicycles can truly be used in so many applications, only one name fits — Crossover.

GT's premier Crossover™ bicycle for 1990,

the Tachyon, removes all terrain limitations. Whether on a Sunday afternoon road ride or a moonlight mountain bike expedition, the Tachyon rises to the occasion. This boundless machine employs 72/73.5 degree geometry built on Tange Infinity double butted tubing with virtually every braze-on imaginable: 3 water bottles, rear rack, front lo-riders, and eyelets for front and rear fenders.

GT's all-new 700D wheels with GT/Araya alloy rims and GT design tires make any terrain a possibility with a simple change from the stock 1.4 slicks to our rugged

2.0 Gila Monster knobbys. SR's all new Fat Drop handlebars are equipped with SunTour's exciting and remarkably convenient Command Shifters and DiaCompe Radius aero brake levers. Gearing has been carefully designed to provide ratios that will handle any pack of roadies you catch or any mountain pass you explore, courtesy of SDS and GT.

Check it out. Black or Quartz Blue. One world. One bike.

SR Fat-Drop bars with Modolo bend and SunTour Command shifters put control comfortably at your fingertips.

CONTINUUM

ARETTE

SunTour's new Express shifters place the levers where you need them, at your thumbs.

The 1990 Continuum

sports the same versatile geometry and braze-on extras as the Tachyon. With the popular flat bar and GT GELCEL saddle, your comfort is guaranteed. SunTour Express under-the-handlebar shifters and DiaCompe XCE brake levers place all the control at your fingertips while GT's carefully constructed 700D Dual-purpose tires mounted on GT/Araya 700D alloy rims carry you on or off the road with confidence. GT All-Terra toe clips and straps take you the distance, but you won't find yourself stranded with your GT/Instaflate CO2 pump. And the colors will knock your socks off — Classic Snowstorm or Cool Blue.

The Arette is designed with one thing in mind — fun.

The 700C wheels, Shimano 200GS STI system with sealed mechanisms, and flat tapered style handlebar, make this the perfect all-around bicycle. Foam grips and a GT Supersoft saddle take you anywhere in comfort and style. With 21-speed Hyperglide, under-the-handlebar mounted shifters, and dual-purpose tires you can attack most any terrain. In either Gloss Red or White, this velo won't let you down.

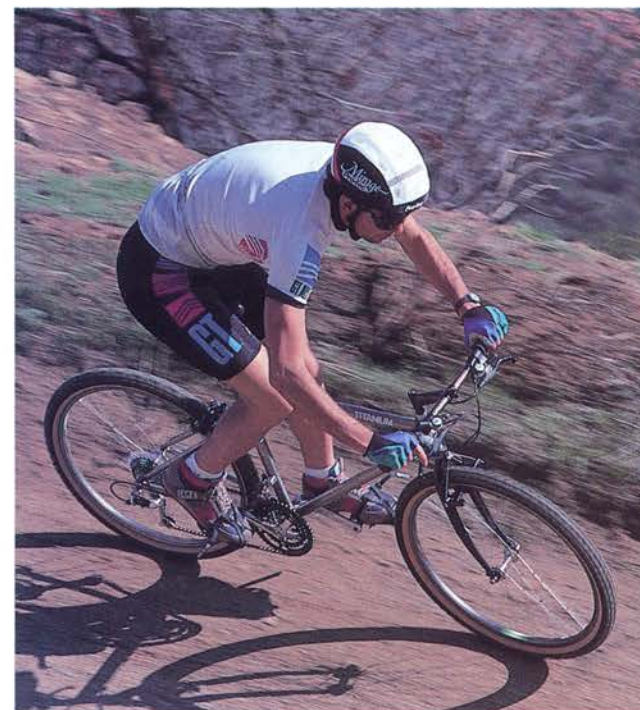

ACCESSORIES

The GT/InstaFlate CO2 pump is lightweight, mounts easily, and allows regulation of tire pressure.

Our GT ATB seat post clamp is cold forged from T6061 aluminum and then heat-treated for strength.

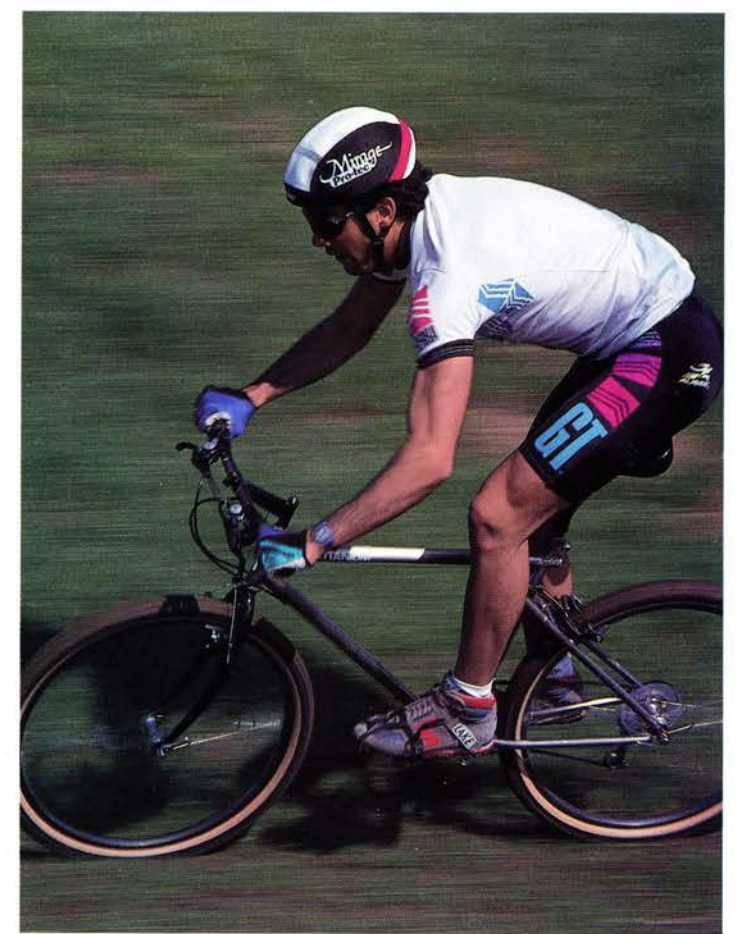

Designed for competition, our GT All-Terra saddle is padded with comfortable urethane beneath its tough leather cover. GT's GELCEL, in men's or ladies' versions, offers the comfort of gel and a new cover that's more durable than lycra. Available in men's and ladies styles, the GT SuperSoft saddle uses soft urethane foam beneath the durable cover.

Voted one of the top ten new ideas for 1989, the GT Cable Crosser offers a sleek look and improved rear braking.

Available in four lengths, our over-size GT All-Terra stem is full chromoly with an alloy bolt wedge. This unique stem uses internal cable routing and has our GT logo stamped on the end cap.

Durable GT All-Terra water bottles are available in red, white, blue, yellow or clear.

The GT Flex-Guard is designed to allow more fender and mud clearance and is interchangeable with the Shimano U-II Guard.

The GT Carrier Clip mounts on the seat tube of 16" and 18" Triple Triangle Design frames for installing Blackburn style rear racks.

Anatomically designed, the new GT/AME grip is comfortable and allows complete control.

GT All-Terra toe clips are designed for high performance. The wide, double yoke allows plenty of shoe clearance, while the thick bottom ensures long wear and solid mounting. Our GT All-Terra toe straps are made of durable woven nylon and are extra long for easy tightening.

For riders who are uncomfortable with standard toe clips and straps, but want performance, GT offers our mini toe clip. Made with a durable, flexible nylon material, these mini clips come in two sizes — Small/Medium and Medium/Large.
