

Bianchi

Bicycles

"It's a Bianchi..."

From the international racing circuit to the showroom floor, there isn't much more that you can say about quality in a bicycle.

Pictured above: Gianni Bugno,
1990 Giro d'Italia winner.

"IT'S A BIANCHI..."

When Edoardo Bianchi first opened the doors of his *Italian Velocipede Company* in 1885, his goal was simple: *he wanted to manufacture the best bicycle in the world.* And he felt that the only adequate test for his bicycles was the proving ground of international competition. With that decision, Edoardo Bianchi set a course that would make his company the most successful racing manufacturer of the modern era.

Unparalleled Success In Racing.

Bianchi won its first major race in 1899, the prestigious *Paris Grand Prix*—precursor to the *Tour de France*. Since that time, Bianchi has won more than 1000 major races—an average of more than one a month since the turn of the century. In 1993—with four world championships in the last six years—Bianchi has the best ongoing record in international racing.

What Our Racing Success Means To Bianchi's Customers.

Bianchi's orientation to racing excellence means a great deal to our customers. It's not simply that we sell bicycles that regularly win races for professional riders. It's also the fact that ALL our bicycles and frames are brought to market with the experience of the cycling industry's best engineers and professional riders behind them.

Our approach and designs have already been validated under the most exacting conditions possible. We develop mountain and road racing bicycles to accomplish the task of winning races. We have been singularly successful in this endeavor. What we discover in the process

helps us make an intelligent blueprint for designing all the models that we manufacture.

Applying Our Racing Expertise To All Bianchi Models.

The product section of our catalogue includes photographs and specifications for 28 different models of Road, Mountain and Cross-Terrain bicycles.

As a group, they represent the application of Bianchi's racing expertise to a variety of riding situations. Each is designed with a unique blend of performance characteristics (comfort, speed, durability, etc.) that will allow you to find a bicycle that fits your riding

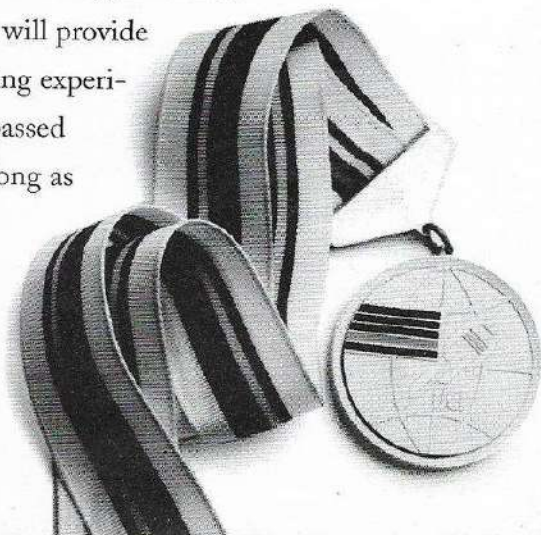

style and preferences.

Whatever your choice, you can be assured that it will provide you with a riding experience of unsurpassed quality for as long as you own it.

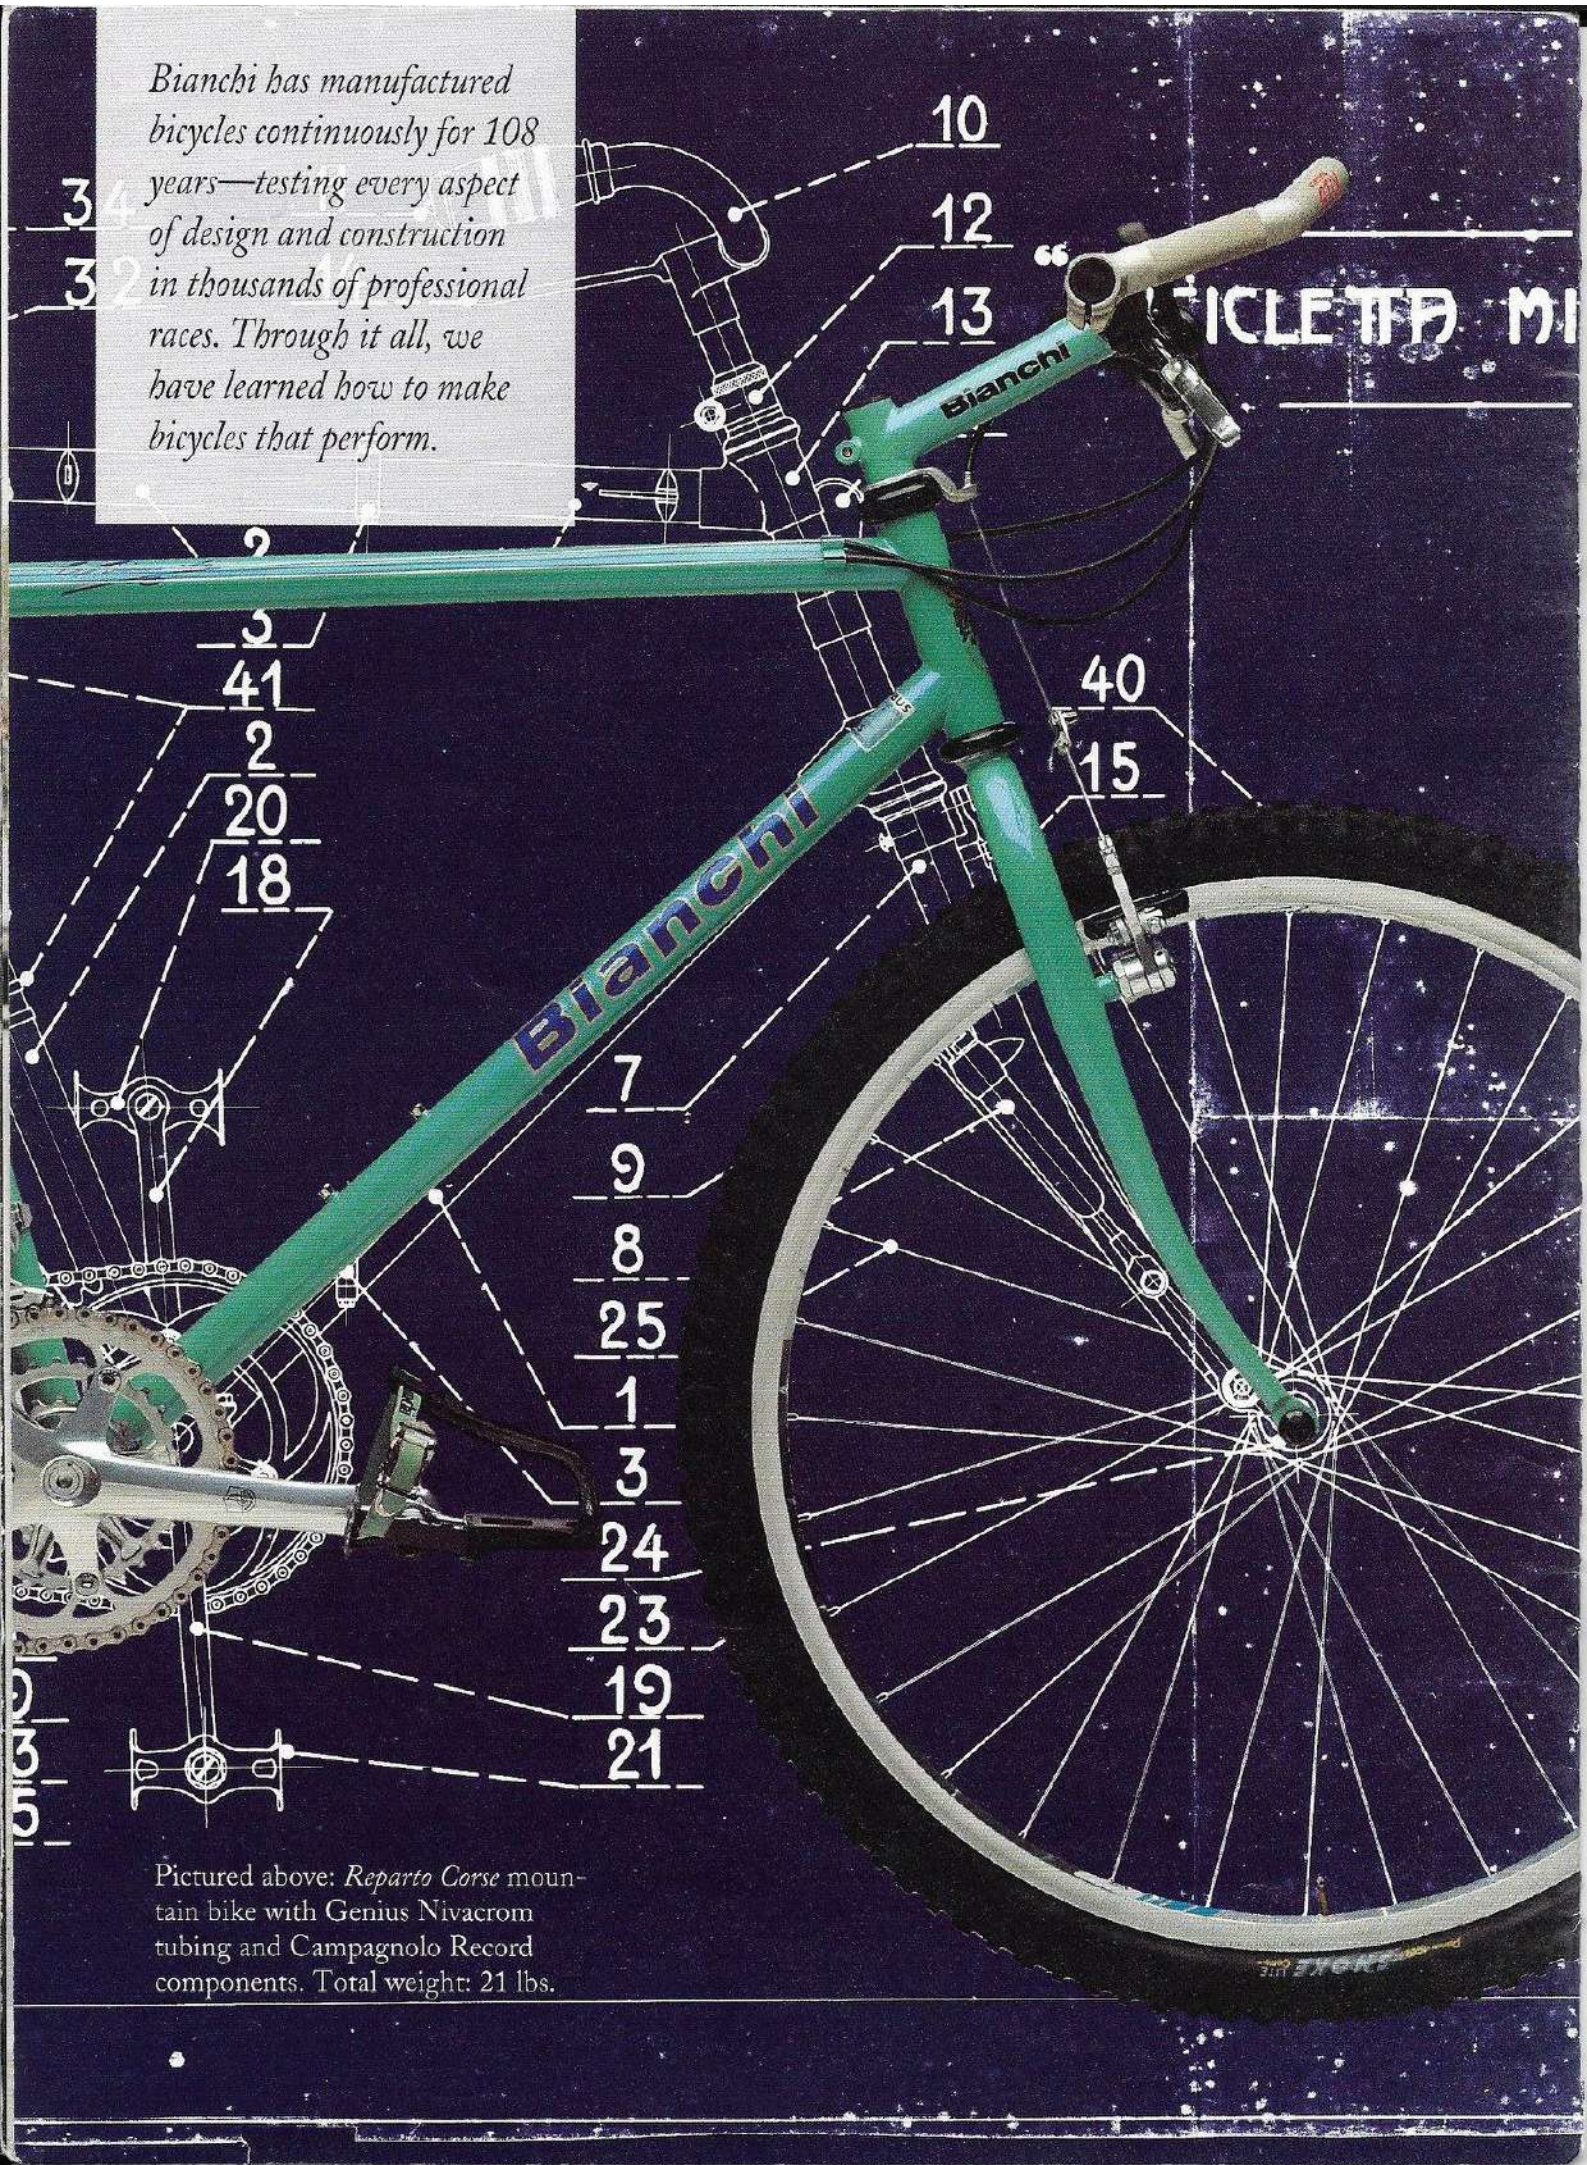

After all, it's a Bianchi...

The trophy pictured here represents Felice Gimondi's 1976 victory in the Paris-Brussels Classic. Bianchi bicycles have won more major races than bicycles from any other manufacturer.

Bianchi has manufactured bicycles continuously for 108 years—testing every aspect of design and construction in thousands of professional races. Through it all, we have learned how to make bicycles that perform.

Pictured above: *Reparto Corse* mountain bike with Genius Nivacrom tubing and Campagnolo Record components. Total weight: 21 lbs.

WHAT MAKES A BIANCHI A BIANCHI

Bianchi's *Reparto Corse*.

"*Reparto Corse*" is Italian for "Race Department". This highly specialized area—located in our Northern Italian factory at *Treviglio*—turns out all of our custom bikes, and the *Gatorade* and *MG/Bianchi* team bikes for our professional team riders—including current World Champion *Gianni Bugno*, Italian National Champion *Marco Giovannetti*, and Mountain Bike World Champion *Bruno Zanchi*. In the select universe of bicycle racing, *Reparto Corse* is the definition of performance.

Northern Italy is renowned for its highly experienced "*artigiani*" or craftsmen. *Artigiani* in the *Reparto Corse* hand-craft Bianchi's bicycles and frames with a level of skill that is unmatched in the world today. In addition, collaboration between these craftsmen and Bianchi's professional riders keep us intimately aware of developments that allow us to challenge successfully at the highest levels of racing competition.

A Focus On Intelligent Design.

The *Reparto Corse* also serves as Bianchi's product development center. Its link to professional racers allows us to determine which product innovations will enhance the overall performance of our bicycles. This ability has translated into a number of important design changes. One example is our SuperSet 2 frameset (see Page 5)—which was developed originally to benefit our race teams, but has been carried throughout our bike line.

Reparto Corse's interactive approach creates a focus on intelligent design—and helps us avoid making changes to achieve short-term marketing "sizzle", or to accommodate one of the many design fads that regularly sweep the bicycle industry. In the final analysis, our design approach is very pragmatic: *We make our bicycles the way we do because it works.*

Felice Gimondi rode Bianchi racing bicycles to victories in the Tour de France (1965), Giro d'Italia (1967, 1969, 1976), and Paris-Roubaix (1966). He was the World Champion in 1973.

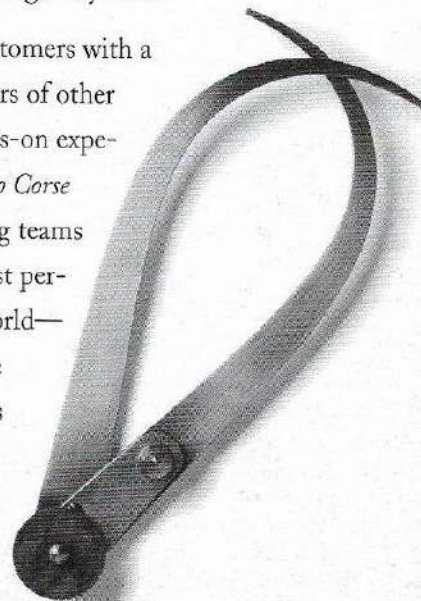

Bicycle Performance And The Everyday Rider.

The *Tour de France* and the *Giro d'Italia* are the two most prestigious bicycle races in the world. They are the focal point of our race teams. But they are also important to our customers. Both races cover virtually every possible riding condition—from flat stages to out-of-category climbs such as the *L'Alpe d'Huez*.

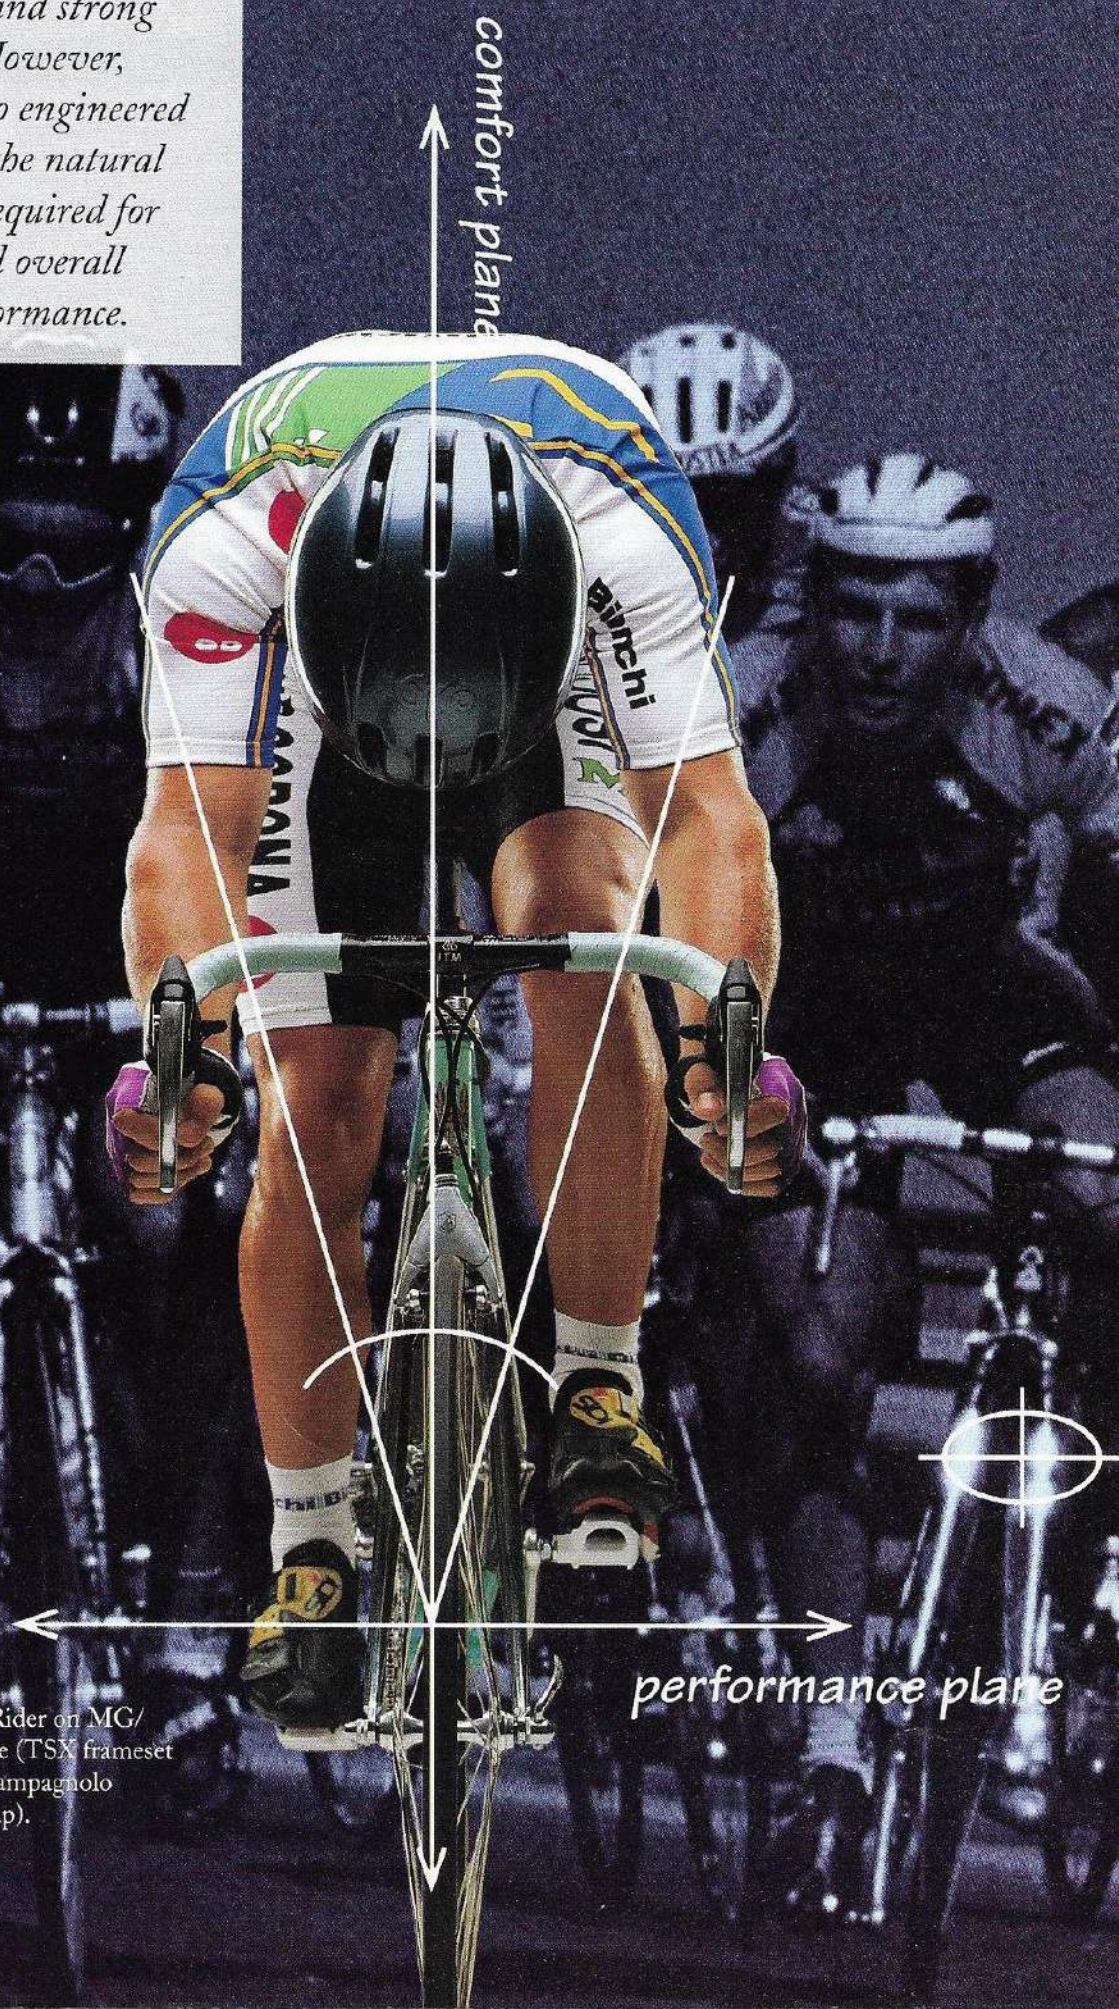

To be competitive, we have to develop bicycles which sprint well, climb and descend well, and have a comfort level that allows the rider to survive stages of 150 miles or more. These criteria define the broad performance requirements shared by most cyclists—who generally are not looking for a single-purpose bike,

but one that does many things very well.

And that provides our customers with a clear benefit over customers of other manufacturers: The hands-on experience of Bianchi's *Reparto Corse* and our professional racing teams allows us to design the best performing bicycles in the world—from our entry level to the most sophisticated models that we offer.

Bianchi frames are built light and strong for speed. However, they are also engineered to provide the natural resonance required for comfort and overall riding performance.

Pictured above: Rider on MG/
Bianchi team bike (TSX frameset
equipped with Campagnolo
Record road group).

HOW A BIANCHI BECOMES A BIANCHI

The philosophy, style and technique of frame construction is what differentiates bicycle manufacturers from one another. Variations in frame design and construction are also the single most important factor in how a given bicycle accelerates, decelerates, climbs, descends—and performs.

Resonance and Strength.

Resonance. A bicycle frame functions as a spring that oscillates to the left and right of a centerline—a vertical axis that runs through the bottom bracket perpendicular to the ground. When a rider pushes on the pedals, the frame flexes or "resonates" like a spring back and forth across that centerline. The less resonant and more rigid the frame, the harsher the ride will be. If the frame is too flexible and snaps back slowly, it is going to feel "dead" and perform poorly.

Strength. The strength of the tubing and frame—i.e., its ability to withstand the stress of constant flexing and maintain its integrity over time—ultimately dictates performance quality. However, a stronger tube stiffens the frame and makes it less flexible. Unfortunately, this can make the frame far less comfortable for the rider.

There is also the issue of weight. You can strengthen a tube by either 1) increasing its diameter ("oversizing"), or 2) increasing the thickness of the tube wall. Both can add unwanted weight to the frame.

Bianchi World Champion Moreno Argentin (1986) is also famous for winning the premier race classic of the European road circuit, Liege-Bastogne-Liege, for three consecutive years (1985-87).

SuperSet 2: Adding Strength Without Weight.

Bianchi's *Reparto Corse* initially developed SuperSet 2 for our racing bicycles. The purpose of this innovative design was to create frames that were stronger—without sacrificing resonance or adding weight. When it proved effective in competition,

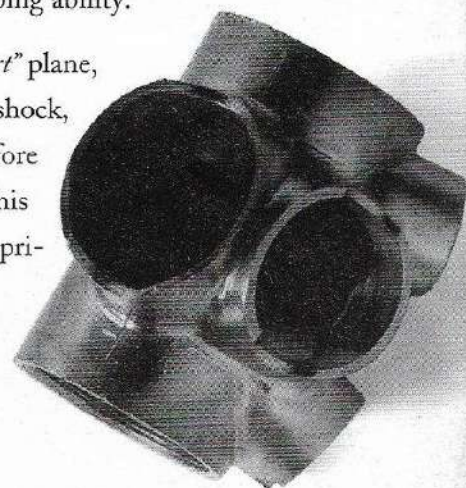

we incorporated SuperSet 2 into the design of our production bicycles.

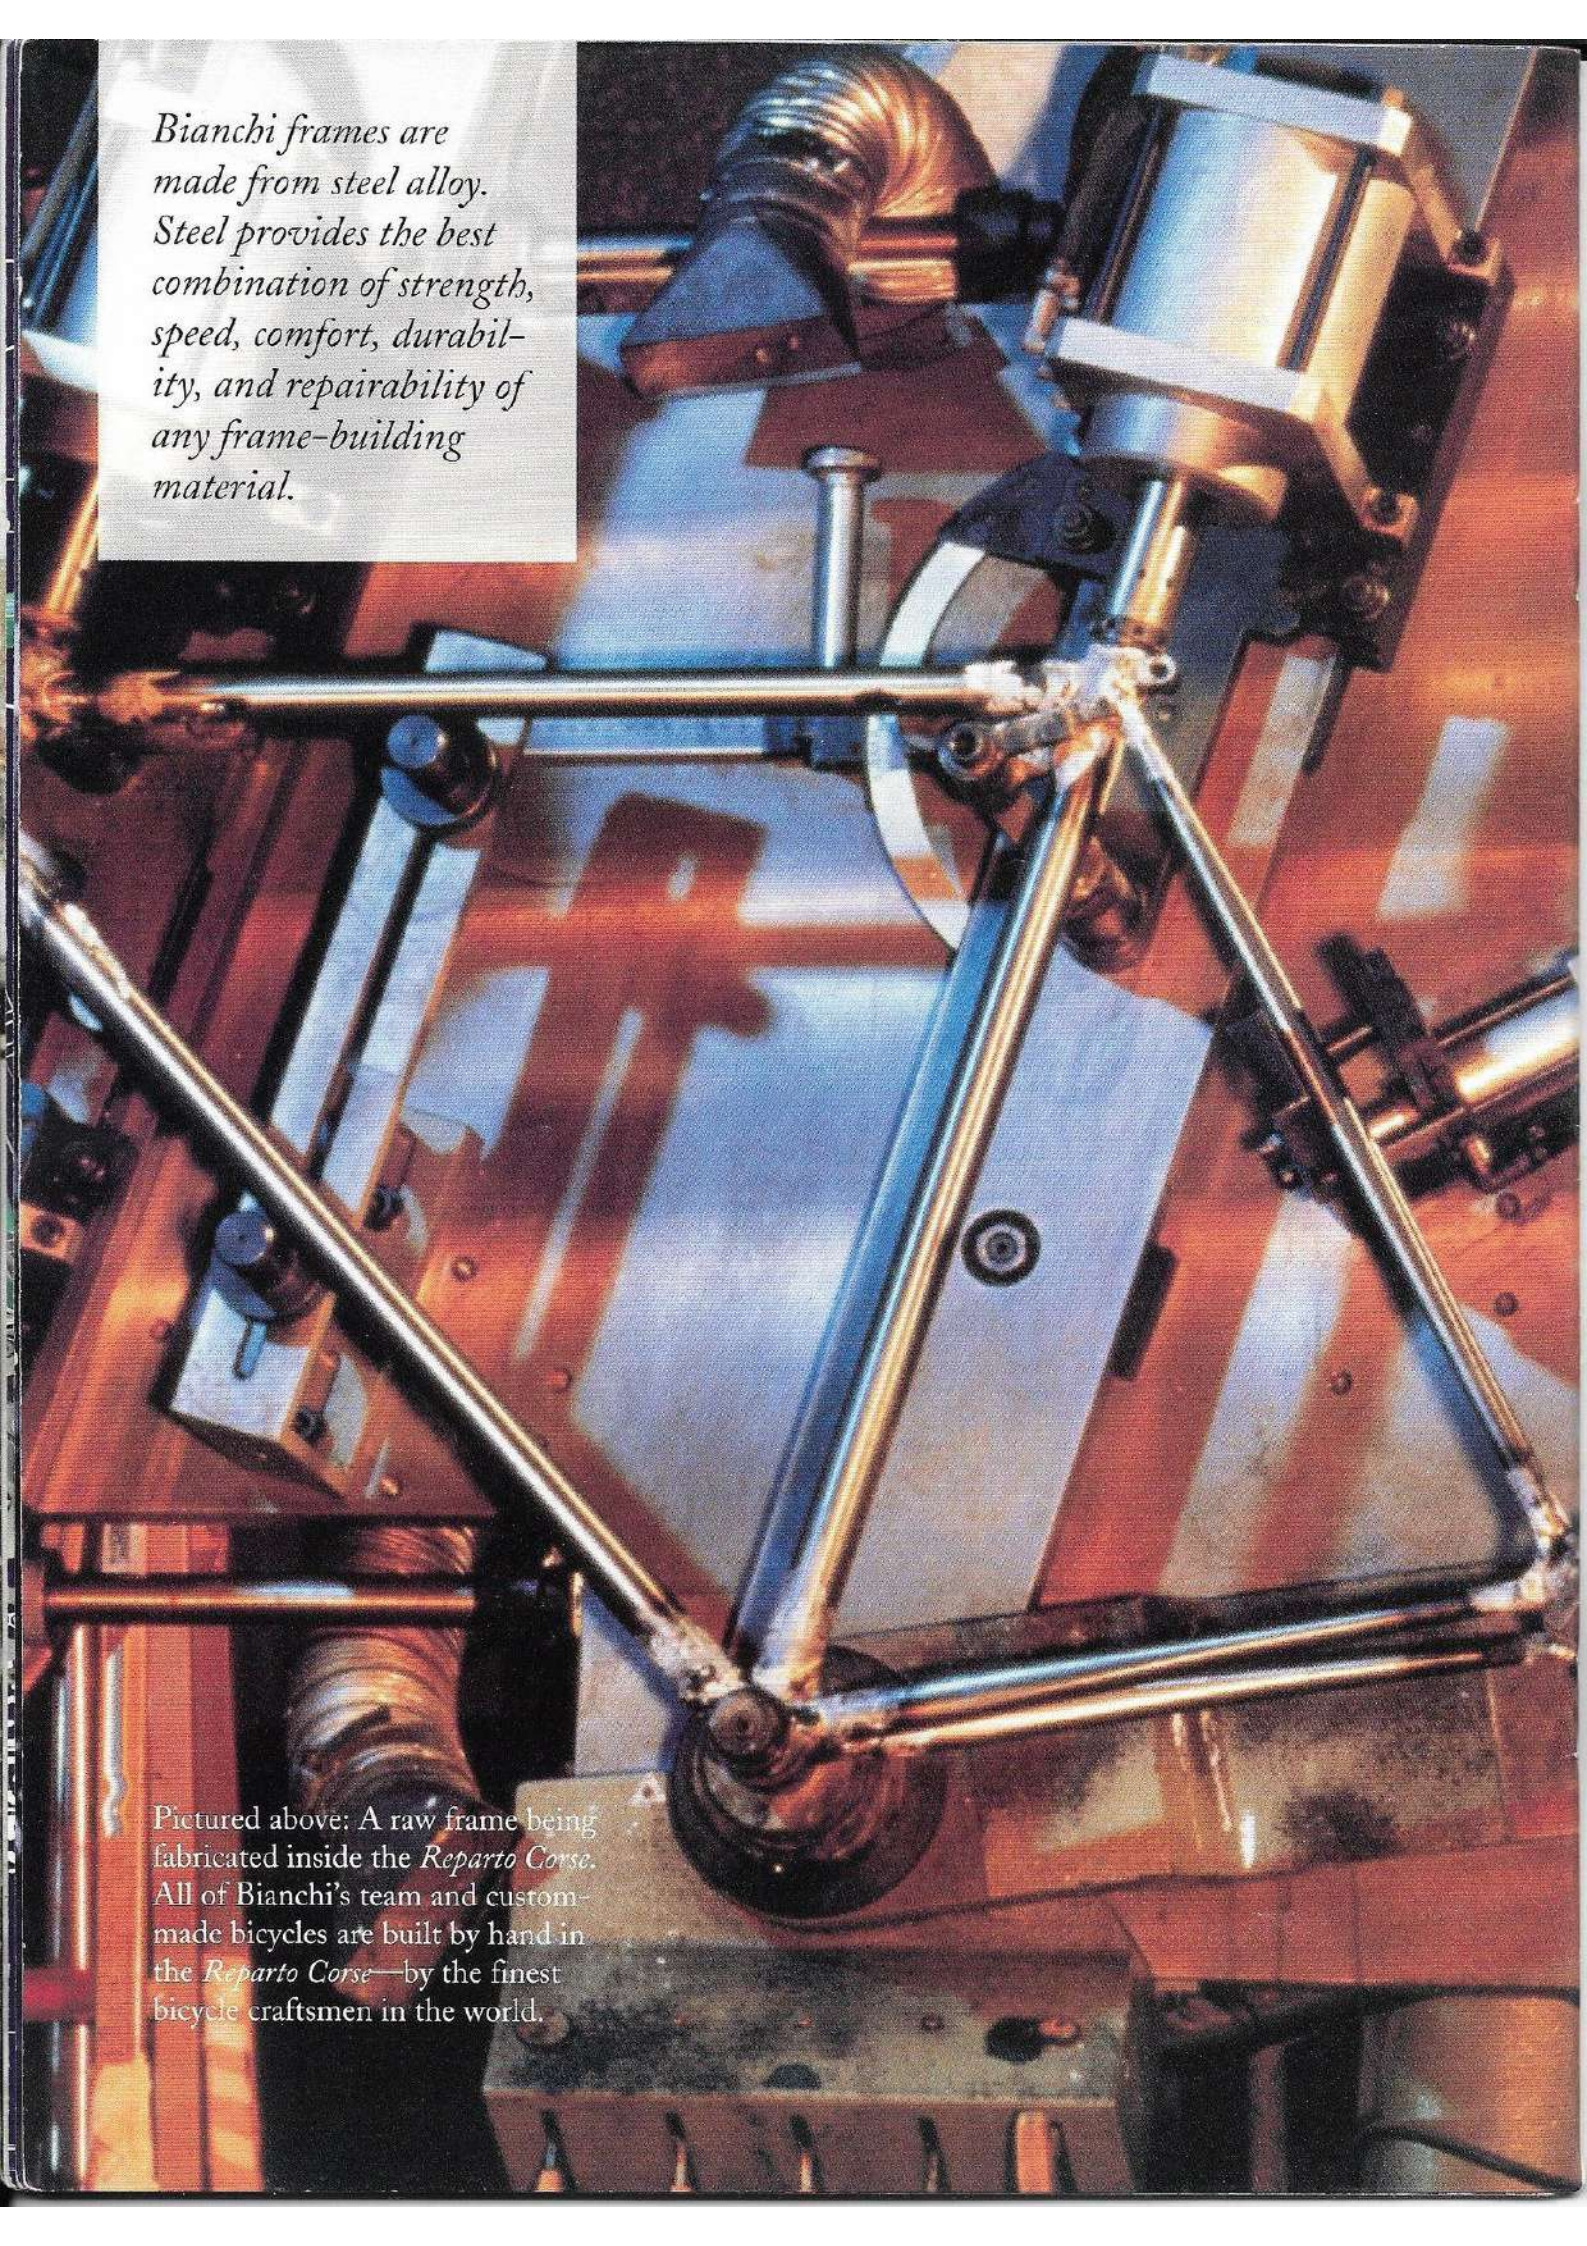

As with most *Reparto Corse* design innovations, the operating principle for SuperSet 2 was simple: Since the primary force of each pedal stroke is transferred to the drive train through the downtube and chainstays, SuperSet 2 was designed with an oversized downtube that is also ovalized at the critical stress point where it approaches the bottom bracket.

By utilizing this downtube construction and selectively ovalizing the chainstays, we were able to greatly increase frame efficiency without adding any unnecessary weight.

SuperSet 2's ovalization gives the lower portion of the frame increased side-to-side rigidity. It also makes the horizontal or "performance" plane of the downtube wider and stronger—which provides the rider with better acceleration and climbing ability.

The vertical or "comfort" plane, which dampens road shock, is narrower and therefore more comfortable. This overcomes one of the primary problems with super-stiff frames.

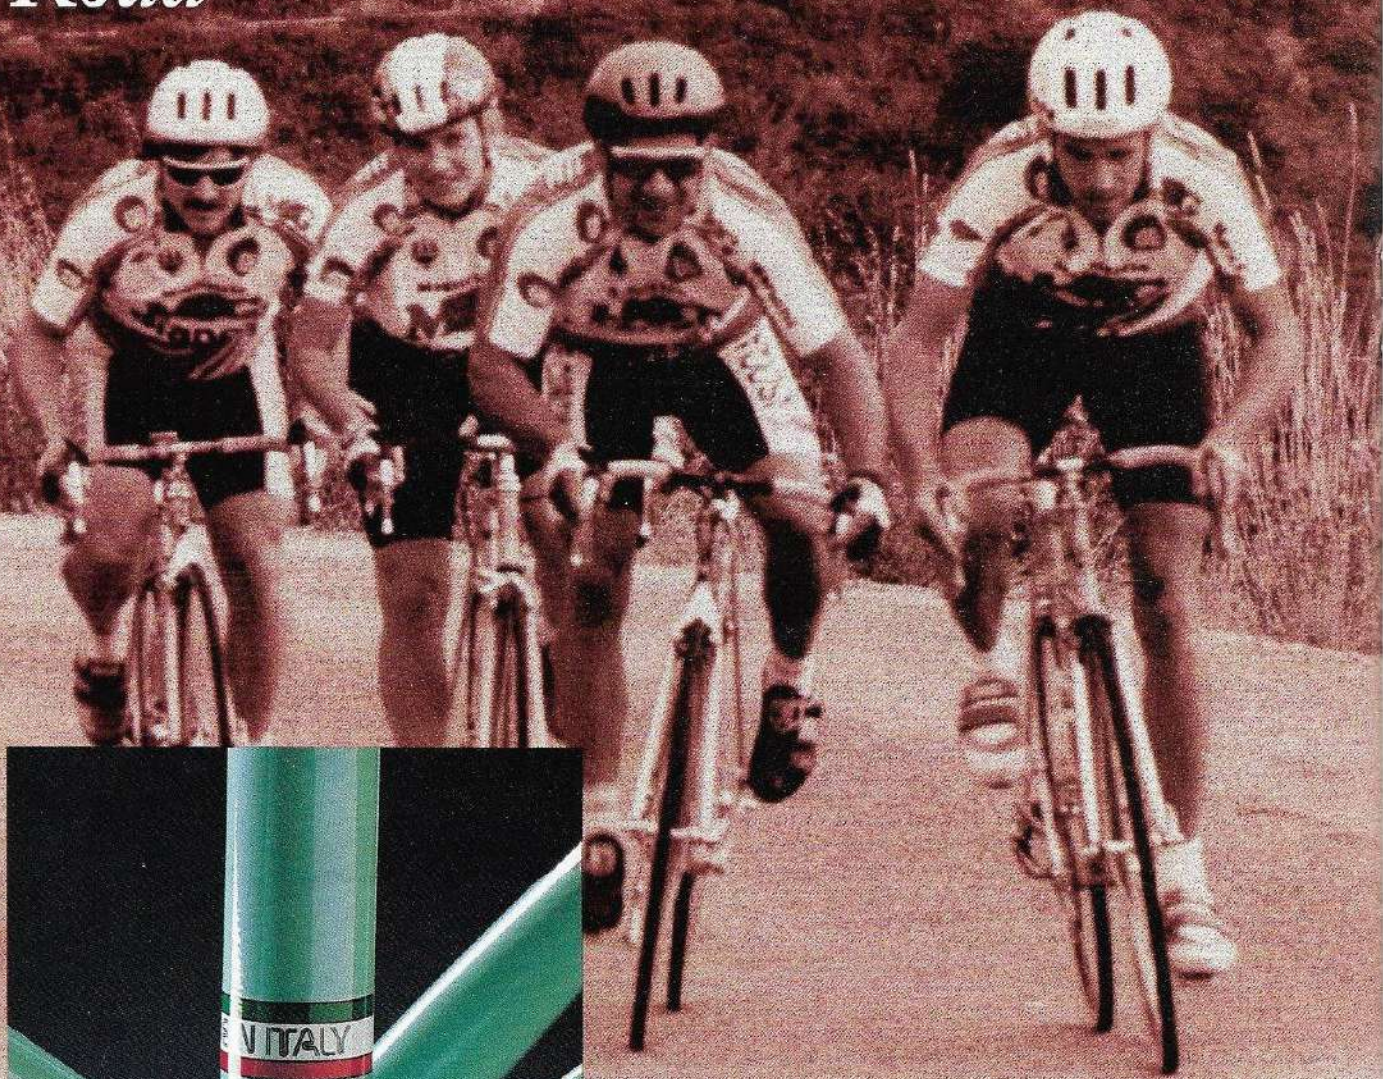

Bianchi frames are made from steel alloy. Steel provides the best combination of strength, speed, comfort, durability, and repairability of any frame-building material.

Pictured above: A raw frame being fabricated inside the *Reparto Corse*. All of Bianchi's team and custom-made bicycles are built by hand in the *Reparto Corse*—by the finest bicycle craftsmen in the world.

Road

Innovation: Born in the *Reparto Corse*, our SuperSet 2 frame design allows us to produce lighter weight frames without sacrificing performance. By custom-blending and selectively "ovalizing" our tube sets, we are able to add strength where it is needed while maintaining a comfortable ride.

Bianchi's color—*Celeste*—is the most recognized symbol of bicycle racing excellence in the world. As the hallmark of our team racing bicycles for more than 60 years, *Celeste* has become synonymous with world class cycling quality and competition.

Bianchi road bicycles and frames include high-end *Reparto Corse* models such as our *Gatorade* and *MG/Bianchi* team bicycles, entry-level performance models such as the *Premio*, and triples such as the *Eros*.

Mountain

Innovation: The new rear suspension system on our full-suspension bike incorporates a swingarm and twin in-line gas shock construction—which minimizes side-to-side rock. It also has easily adjustable springs with lock rings which enable you to tune the suspension system to the specific terrain requirements of your ride.

Most of Bianchi's champions have been road racers. Now we have a champion who races Bianchi's high-performance mountain bikes: *Bruno Zanchi*, winner of the 1991 Junior World Downhill Championships.

We strongly promote minimum-impact cycling with our mountain line—from our *suspension* models to our *performance* and *sport* models. Bianchi mountain bicycles are named after threatened and endangered species to emphasize the care that should be taken riding through sensitive habitats.

Cross-Terrain

Innovation: *The standard 26" mountain wheel allows for very aggressive riding—particularly on downhill and unstable surfaces. The larger wheel on our Cross Terrain/700c mountain models has a longer "footprint"—which gives them superior climbing ability. These larger diameter wheels also roll more easily over a varied terrain.*

Bianchi invented what is known in the industry as the "hybrid" bicycle. Our trademarked name for the hybrid is "Cross-Terrain"—which is a functional description of this unique line. Our hybrid models are great on pavement or fire trails, because they combine the light weight and quickness of a road bicycle with the comfort and durability of a mountain bike.

As a category, hybrids represent the fastest-growing segment being sold in the American bicycle marketplace today.
