

<96 Dealer Catalog>

Within this catalog you'll find just about everything you'll need to know about the 1996 Haro product line and how to sell it. What you won't find is a collection of bikes speced to cover every possible price point and designed to appeal to every tom, dick and harry on the planet. Think of it as a sales tool that will give you a clear picture of what Haro is all about, why we're different and who every bike we make is designed for.

<WHERE WE COME FROM>

Carlsbad, California to be exact. Haro has been in the bike business since 1978. And we've been making mountain bikes or ATBs since 1986. But we built our reputation producing radical and expensive BMX and freestyle products. As a result, there's a whole generation of kids who grew up on Haros that are now prime candidates to purchase a mountain bike. And we're still laying the groundwork for future generations by keeping our finger on the pulse of the BMX market.

<WHO WE'RE TARGETING>

In general, we're after young, athletic, male consumers. For ATBs they're between the ages of 18 and 35. For BMX and Freestyle they're between 7 and 17. Generation X, the MTV generation, active, affluent and willing, if not intent, on finding an alternative to "ho-hum" conventional bikes. Consumers who are very much like the management team here at Haro responsible for creating the bikes featured in this catalog.

<WHAT WE DO TO BE DIFFERENT>

Every bike we produce has a frame that is visibly different from our competition. We're not talking about special paint, secret geometries, sloping toptubes or oversize tubing. We're talking in your face, blatantly obvious frame designs that cannot be confused with other brands. Frames like the V-Bar design used on both ATBs and BMX bikes and the Megatube design found on our street/freestyle models.

In addition, we've separated our line into distinct categories or series to make it easier for you to steer customers to the type of bike best suited to their individual style or level of riding. Once that's been established, you can zero in on the right model by determining their specific needs or budget. It's a simple yet effective way to make selling Haro as easy as possible.

<WHY WE DO IT>

Our radical approach to bike design is not for everyone. If it's bikes for the masses you're after you won't find 'em here. What you will find are bikes that deviate from the norm and attract attention when compared to the mass produced cookie cutter bikes offered by our competition. We want to make waves, rock the boat and create something that prompts your customers to do a double take and then to ask questions when they see a Haro.

Take it to Extremes

<Extreme Series> (Full Suspension)

The Extreme Series features two models (a third will be introduced in spring of 1996), one priced at \$1000 and the other at \$1600. The Extremes. Functional suspension without the hassle, expense and complexity of multiple pivots. We're not trying to dazzle you with rocket science you can't understand much less afford or maintain. We're not claiming you'll go 10 mph faster or win the Kamikaze. We are offering user friendly, basic engineering that actually works. The Extremes are built around an aluminum front triangle matched to a CRM0 rear swingarm that has been triangulated this year and strengthened. The result is reliable and affordable performance for severe terrain or riders who just want to go fast and smooth.

EX2/EX1: New Triangulated Swingarm w/Brace

EX2: WTB Brakes, RockShox Quadra 2LR

EX2/EX1: Grip-Shift, Tektro

EXTREME EX2

RIDER PROFILE

Speed freaks and downhill racers who appreciate the benefits of full suspension without the complications.

<Escape Series> (Aluminum Construction)

The Ultralight Series features aluminum frames and prices starting at \$500. The Ultralight Series focuses on weight reduction (don't we all) and picks up where the Vector Series leaves off both in price and rider skill level. The Escape A0 is our "entry level" aluminum bike and four other models through the XTR equipped A4 round out the series.

A4/A3: Ritchey Logic clipless pedals.

Escapes: Anti chain-suck plate.

A3: WTB speedmaster cantilever brakes.

ESCAPE A4

RIDER PROFILE

Hardcore riders, unsponsored NORBA cross-country racer or doctor who wants a bike to match the Porsche.

>Easton Aluminum Oversize V-Bar Frame >RockShox Judy SL Suspension Fork >Ritchey Rock 395/415 Rims with DT Spokes >Shimano XTR Hubs >Shimano XTR V-Brakes >Shimano XTR 24-Speed Derailleur >Shimano XTR Rapid Fire Plus Shifters >Shimano XTR Cranks >Ritchey Comp Clipless Pedals

ESCAPE A3

RIDER PROFILE

Hammerheads and part-time racers who want the best equipment money can buy but can't afford a custom bike.

>Easton Aluminum Oversize V-Bar Frame >RockShox Judy XC Suspension Fork >Ritchey Rock 415 Rims with Stainless Spokes >Shimano Deore LX Hubs >WTB Speed Master Brakes >Shimano Deore XT 24-Speed Derailleur >Shimano Deore XT Rapid Fire Plus Shifters >Sugino Impel 700 Crankset >Ritchey Comp Clipless Pedals >Vetta TT Racing Saddle

ESCAPE A2

RIDER PROFILE

Aggressive riders who appreciate the luxury of 24 speeds, a lightweight aluminum frame and Rock Shox performance.

>Aluminum Oversize V-Bar Frame >RockShox Quadra 21R Suspension Fork >Ritchey ROC 415 Rims with Stainless Spokes >Shimano Deore LX Hubs >Shimano STX Brakes >Shimano Deore LX 24-Speed Derailleur >GripShift GS-600 Shifters >Vetta Racing Saddle

- >Ritchey OmegaBite/Z-Max Tires
- >Vetta Comfort Saddle

V-BAR STORY

The V-Bar top tube design is featured on every ATB and BMX frame we produce. The trademark top tube bend creates a frame with an obvious and striking visual difference. What you may not see are the benefits that come from increased standover height, a lower center of gravity and the feel of a smaller bike. As a Haro dealer, what you'll really appreciate is the ease in sizing your customers and the reduced inventory that fewer frame sizes provide.

Aside from the visual distinction offered by the V-bar top tube bend, the design also facilitates proper bike fit. Unlike conventional frames that require up to five frame sizes to fit most customers,

the V-Bar accomplishes the same thing with a 15.5", 17.5", 19.5" and on two models a 21.5" frame to accommodate especially tall riders. By using a small, 4.25" headtube on each size in conjunction with the V-Bar bend a 15.5" frame fits the same consumer who would need a conventional 14" frame. Conversely, a 19.5" v-bar frame has the equivalent standover height of a 17" conventional frame yet has 23.25" toptube length that would be typical of a 21" or larger frame. The bottom line is that standover height is usually not a factor in sizing a V-Bar frame so you can concentrate solely on proper toptube length. It's simple. And best of all it means less of an inventory investment to satisfy the majority of your customers.

Believe it or not, Haro has been producing mountain bikes since 1986. And although our efforts were usually overshadowed by our reputation as a BMX and freestyle powerhouse, we've never stopped producing ATBs that defy tradition and make a statement. Our first bikes incorporated a triple triangle design in which the seatube pierced an oversized monostay seatstay. Even that first design featured the V-Bar top tube we still use on every '96 model today. Later we pioneered the infamous elevated chainstay concept that has evolved into the full suspension Extremes you'll see in our '96 line. It's remarkable how similar those first Extremes look when compared to the latest revision. Along the way we bolted aluminum front triangles to steel rear triangles, used a lot of oversized tubing before it was the rage and in general pushed the envelope a lot further than our more conservative competitors. And we're not about to change now.

<Vector Series> (Steel Construction)

The Vector Series features steel frames that start with inexpensive 1021 hi-tensile construction and finish with lightweight butted chromoly tubing. Retail prices range from about \$250 retail to just under \$600. The Vector Series progresses from a basic 18-speed alloy wheeled V0i to the front suspension V4s. In between you'll find competitively speced models that cover key price points.

V4/V3: Pro-4 crankset w/bolt on chainrings.

V4r/V3s/V3a/V2c: GripShift.

V2c/V1e/V0i: SR crankset w/index chainrings.

VECTOR V4r

RIDER PROFILE

The enthusiast who hasn't made his mind up about suspension but wants a lightweight, high quality bike to build on.

>CRM0 Oversize V-Bar Frame >CRM0 800 Radius Bigfork >Alloy Rims with Stainless Spokes >Alloy Hubs with Front & Rear Quick Release >Shimano Acera-X Brakes >Shimano STX Derailleur >GripShift SRT300i Shifters >Pro/4 Crankset with Bolt-On Chainrings

Having started in the BMX business back in 1978 we could go on and on about our illustrious history. It's tempting since we've won nearly every title you can win and sponsored in one form or another nearly every Hall of Fame rider there is. But we won't bore you with the details. Because that was then, this is now. And unlike some of the big names back in the early days of BMX, Haro hasn't lost its edge. In fact, we're still pushing the limits of product innovation.

While others may be satisfied to offer the status quo and make a quick buck on the resurgence of BMX, we refuse to kick back or rest on our laurels. We're in it because BMX and Freestyle are part of the heart and soul of Haro. It's in our blood and our commitment shows in the products you see featured in this catalog.
