From day one, Haro has always been one of the most respected and innovative companies in BMX. We earned our reputation by finding the best riders we could, listening to what they said, then building the products they asked for. It seems pretty simple, but a lot of our competitors have had problems figuring it out. Given that two of the industry's biggest brands have recently taken a face-plant is evidence of that fact.

To some extent, the void created by the demise of those huge corporations is being filled by new, small, "rider owned" bike companies. Companies that are very much like Haro was back in the day. Where we differ is that as a rule, they're long on attitude and short on experience, while Haro is long on experience and short on attitude. We've learned over the years that success comes not from what you say, but what you do.

What we've done is to help pioneer BMX racing and to create the sport of freestyle. We've pushed the sport's development with innovations like monocoque frames, split-extrusion technology, and left-side drive. We've proven the performance of our products through the accomplishments of riders like Dave Mirra, Ryan Nyquist, Chad DeGroot, and Jamie Staff.

It doesn't matter whether your thing is performance, innovation, quality, or value, Haro has you covered. For us, earning respect from riders like you is not about being big or small, it's about making the best bikes possible, and we like to think we do that better than anyone.
