

PROGRESSION THROUGH BETTER DESIGN

There's usually one release per year with bike companies. They drop their new collection on you around summer time and a full year goes by before the new stuff hits. But what if new resin pedal technology, wild paint schemes, slimmer saddles or bigger bars become popular just months after the release? Up until now, we were stuck in that boat and had to wait until the following launch to show these additions.

Stuck no more. We've changed the way we're releasing our bikes. Gone are the days of one launch per year. If we've got a good idea now, why wait to express it? What you're about to see are a lot of those good ideas all rolled into one amazing line, starting with slimmer seats, more color, and maybe even a frame change or two. With this progressive thought process, you guys don't have to wait a year to check out all the latest trends on complete bikes. If it's happening now, here is where you will find it.

We refined the team this year as well. Ryan Nyquist, Colin Mackay and Mike Ishizuka have all returned to the team with smiles, and complementing them are the amazing young talents of Dennis Enarson, the UK's Ben Wallace, as well as one of the better street riders on earth, Ben Hucke. All this equals better rider input, which translates into better riding bicycles. Thanks to the team, you benefit with the best geometry, technology, and parts we choose to put on our bikes.

Enjoy. Ride it.

FORUM SERIES

In this BMX age of a faster-paced evolution and fashion above all, the Spring 2008 launch of the Forum series has benefited from this new way of life. Cutting edge colors, designs from other industries and quality that is generally matched by none, the Forum series has been lightened up with a new frame design and better geometry. We continue Forum tradition with the Counterpart and Pro utilizing the same double-buttressed Pro-level frame. The drive trains have been shrunk on most bikes and the tires have been switched to the ever-popular Odyssey Dirt Path and Path Series tires. We also put the new Haro Octagon grips and Forum slim saddles on these bad boys. It's crazy how we made something that was so good last year even better.

FORUM LITE SERIES

We took the Forum, stream-lined it, road tripped it to Brooklyn and back, gave it to Ish to try and tweak in Vegas, brought it back home, checked it out, then built a full line of bikes around it called the Forum Lites. What we didn't know was that all you riders would take to them so well.

Our goal was to make a well-accepted and streamlined machine affordable to the enthusiasts built just the way they would have built it themselves...even down to the paint. We give you options of mild and wild colors, a graphic package that is unique to each model and more aftermarket brand names that should make the bike cost twice as much. Oh yeah, I almost forgot to tell you, we added the popular and adjustable Convert frame. That's right; our aftermarket frame can now be found on the Pro Lite and Counterpart Lite models. There's no telling where the value and style are going end.

F SERIES

Aimed at the riders that want more bells and whistles for their bucks, the F-Series is an important part of our line up. Not only do you get new colors and graphics with the F-Series, you get tremendous value as well. With the F16 and F18 models, riders can start at a younger age with a four peg, front brake bike. Lighter frames, four pegs, front brakes, 48 hole wheels with 14mm axles and a rotor...there's not much more that a Street and Park rider could want in a BMX bike. For you less-stable riders out there, we made a 24" version so you can learn quicker, or get back to where you were 15 years ago. Enjoy.

X-SERIES

For Spring, we've completely redesigned the X-Series line of bikes. New frames, seats, pedals, paint, graphics, tires – man, almost everything! Gone are the days of this bike being considered just a trail bike. The X-Series is for everything: street, ramp, vert or dirt. They have been completely updated with 36 hole wheels featuring a 3/8 front axle, slim seats, a Joe Dirt/MS4 tire combo, a newly designed frame and a multitude of graphics that give each model a look of their own. Oh yeah, we shaved off almost 2lbs from last years models, too. What are you waiting for?

SR SERIES

Racing is about one thing; going fast. And if you want to go fast, you can't be riding a boat anchor. We built the SR series with that in mind, and gave each model a new, lighter frame loaded with alloy components that rival those used on our pro team's personal bikes - sealed bearing hubs, SINZ parts, and Intense Tire Systems' racing tires. We've given you two color options in a Bright Silver and Gloss Black, both with anodized orange hubs to add some bling to your ride. You pick which one best suits your style.
