DIFFERENT
STORY

OUR PASSION - BICYCLES

We strive to incorporate this fact as best as possible into the production and assembly of HEAD bicycles. We have been manufacturing bicycles for 25 years already, and this long-term experience has enabled us to turn dreams into reality when applying new technology and fulfilling the cycling public's demands. The production of HEAD bicycles is based on quality which is guaranteed by manual assembly of bicycles. This is very important for us because we always put quality first. The route taken on a bicycle is never direct, and neither is it during bicycle production. At the beginning of the development of each bicycle, we focus thoroughly on the technology of new frames, alignment and design. This is followed by selection of the correct components and additions, and of course we always try to keep up with trends when choosing colors as well.

The frames made with this technology are monolithic constructions carbon fiber constructions with fibers placed alongside each other. The classic shape of the tubes, in conjunction with their large diameters, resulted with a very low weight and high durability.

Frames made of 6061 alloy are stiff and resistant to breakages, while retaining the light mass typical for aluminum. They are also heat-treaten after the welding, that also improves frames durability.

Butting is the process, which decreases the frame weight, while the overall durability is on the same level or is even improved. HEAD alloy frames are double or triple butted, type of butting depends on the frame model.

Bearings are placed inside cups and the cups are pressed into the frame to increase pedaling efficiency. These cups reduces bearing wear out and creates a better transfer of the driving force to the wheel.

Direct mount of the front derailleur allows us to increase the stability of the connection between the derailleur and the frame.

Inner cable routing reduces wear out of cables and shells, it protects them from mud, rain and sand. It also improves the overall appearance of the bike design.

Hydroforming is an industrial technique wherein special liquids are injected into the frame tubes using tremendous pressure. Hydroforming offers several advantages such as: complex shapes, improved bicycle frame aesthetics and others.

Tapered head tube with increased diameter from 1 1/8" to 1.5" improves the overall stiffness which increases strength of the front of the bicycle. This leads into better precision of the bicycle control.

Post-mount brake system eliminates the unnecessary adapters, which improves the stiffness of the connection between the frame and the brake caliper.

Thru axle system helps us to stiff the connectivity of the fork and the wheel. The rear thru axle allows us to improve stiffness of the connectivity between the rear wheel and the rear triangle. In overall the thru axle system adds very important stability and precision during the riding

Boost standard hubs - the wider hub flange with 148 mm on the rear hub and 110 mm on the front hub and the stronger spoke-bracing increases the overall stiffness of the wheel.

dualPWR - it means combining a classic bicycle with electric drive. We use two variants of motor placing - middle motor and rear hub motor. Drive unit can provide up to 80Nm of torque.

THE FULL SUSPENSION RACES

HEAD 2019 full suspension line consists of two carbon cross country bicycles with 100mm travel. We have kept the same frame shape as in our last collection, but we have made some crucial improvements.

The new Adapt Edge is ready to handle boost wheels, which will certainly have a positive effect on the precision and stability during the riding. New frames are finished with glossy painting, that gives them fresh and unique look. The suspension system is very sensitive when you are going downhill, and it stiffens significantly when you are traveling uphill. If you lock your rear shock you can go uphill and feel like you are riding on a hardtail.

Two different specifications - choose the best for yourself and try it out.

THE MOUNTAIN BIKE ADVENTURES

MTB line is one of the most important product lines in the HEAD Bike collection. We attach great importance to the quality, weight and design of our bicycles. New season will bring wide range of new models.

In the new collection we upgraded our Trenton frame. The new Trenton is made of new carbon, that allowed us to make it lighter and stiffer. Very important is, that we have changed the hub spacing. Now you can find boost hubs on our top carbon models.

You can choose one of five different specifications, including the new Shimano XTR 1x12 and Sram XX1 Eagle drivetrains. Let's go through our carbon mountain bike adventure, choose your HEAD bike and go to ride it.

The MTB ALLOY line consist of three different models:

- X-Rubi
- Granger
- Troy

All X-Rubi frames are made of 6061 alloy. They are double butted and heat-treated after the welding. These processes helps us to make it light and strong. Our mountain bikes look aggressive due to hydroforming on our top models. In top models you can find tapered forks, thru axles and 1x12 drivetrains.

The Granger and Troy models have new fresh designs and improved cable routing inside the frame.

THE JOY LINE

JOY line is a special bicycle line orientated on ladies. Bicycles have to fit them properly.

We have been focused on adjusting the geometry, length of the top tube and standover to make Tacoma perfect for ladies. Design, profile of the saddle, length of stem are selected to meet the expectations of the most demanding users.

Choose your bike and have JOY of it.

THE dualPWR

dualPWR means more possibilities, more goals to reach. With no uphill and downhill limits. With our ebikes you can go wherever you want.

The 2019 year gives a lot of changes in the HEAD ebikes range. The new collection has been completely refreshed. There you can find new carbon full suspension bikes (Muret), long travel FS alloy bikes (Durango, Terni) and alloy hardtails (Lagos, Granby). In some models we have decided to have a fully integrated battery in the frame for a clean, fresh design.

This year you can choose one of two ebike systems:

- Shimano STePS
- Bafang

We believe that everyone will find the perfect ebike for themselves.

SHIMANO STEPS

On our bikes you can find three different models of Shimano STEPS motors. Type of the motor depends on the category of bicycle use.

- We are using these three Shimano models:
- STEPS e8000 - for enduro and top mountain bikes hardtails
 - STEPS e7000 - for mountain bikes hardtails
 - STEPS e6100 - for trekking and cross bicycles.

In the table you can find technical specification about each set of motor + battery.

	E-8000	E-7000	E-6100
Type of motor	middle motor	middle motor	middle motor
Power	250W	250W	250W
Assist modes	boost trail eco walk	boost trail eco walk	high normal eco walk
Max Torque	70Nm	60Nm	50Nm
Battery	504Wh	504Wh	504Wh
Range on full charge*	boost - 50 km trail - 75 km eco - 100 km	boost - 50 km trail - 75 km eco - 100 km	high - 85 km normal - 120 km eco - 170 km

*Power-assist mode and capacity / travel distance (based on combined rider/bike weight of 100 kg, traveling on flat roads at 23 km/h)

BAFANG

The Bafang units are fitted in well known Granby, Trivor, Dayton and the new models of the RM series: I-Peak, Revelo and City.

The RM series is something new in our collection. These bikes have a motor that is placed in the rear hub of the bike and battery is fitted either on the down tube or carrier. The engine in the rear wheel gives you more grip.

On the ebikes with Bafang motor we are using these two motors:
- MM G330
- RM G020

Close specification of each variant is presented in the table below.

	MM G330	RM G020
Type of motor	middle motor	rear hub motor
Power	250W	250W
Assist modes	assist mode 1-5 walk	assist mode 1-5 walk
Type of sensor	speed and torque integrated	
Max Torque	80Nm	45Nm
Battery	500Wh	500Wh
Range on full charge*	110 km (Dorado ID-1)	80 km (Greenway ZZ98)

*Power-assist mode and capacity / travel distance (based on combined rider/bike weight of 100 kg, traveling on flat roads at 23 km/h)

frame: alloy 6061 HT TPR
travel: 100mm
drivetrain: 1x9 Shimano ALTUS
sizes: 46, 51, 55 cm
colour: black matt/yellow

THE I-SPEED LINE

The I-Speed line is something special for every road bike fan, but not only for them. The new season brings changes in the entire road bike collection: new designs, new shapes of the frames, better materials.

You can choose from five different specifications. The top model - I-Speed V has Shimano Ultegra Di2 drivetrain and HBC RRX Forty5 full carbon wheels. This is the lightest road bike that we ever made.

ISPEED V

- frame: carbon aero TPR
- fork: carbon dual chamber
- drivetrain: 2x11 Ultegra Di2
- sizes: 57, 59, 61 cm
- colour: black matt/grey
- weight: 7.5 kg

ROAD

THE GRAVEL ROADS

When the asphalt road ends, you need a bike that will be able to take you to the forest path and back on tarmac, Picton is the bike that will be able to meet this challenge. It is all about the adventures that you can make on your bike and HEAD Picton Gravel bike is waiting for it.

You can choose one of two specification variants with Shimano Tiagra 2x10 and Sram Apex 1x11 drivetrains. No matter the terrain, weather or location, our gravel bikes are ready to give you as much fun as possible on your every adventure.

When the asphalt road ends the adventure on a gravel bike starts.

THE CROSS JOURNEY

The HEAD cross bike line consists of well known X-Rubi Cross and I-Peak models. The new collection has brought new designs and upgraded frames. All frames are made of high quality 6061 alloy, with hydroformed tubes, what gives the bike a unique look. All cables are routed inside the frame tubes, so they look very nice and clean.

Various of specifications and durable components making HEAD cross bikes a great choice for a town-to-forest journeys.

THE TREKKING PATHS

The Revelo trekking bicycles are also known as long-distance bicycles - they are perfect for long, demanding trips and excursions. Thanks to the universal and comfortable construction, they can be successfully used for asphalt rides as well as for rides on unpaved paths and off-road tracks.

Due to the fact that trekking bikes are designed for long distance travels all models have been equipped with functional accessories, such as: dynamo and electric lamp, mudguards or carrier. The carriers on trekking bikes are adapted to the installation of special bicycle bags in which you can carry equipment necessary for longer trips.

THE CITY CRUISING

Free movement around the city is one of the most pleasant moments you can afford by choosing city bikes as a possibility of transport. HEAD City line is adapted for comfortable asphalt driving among trees. While riding a bike, you can find the real charms of the city avoiding stressful traffic jams.

Comfortable and safe driving around the city streets brings a lot of relaxation and sports activity at the same time

Say goodbye to traffic jams on the streets and enjoy free movement around every corner of your city!

THE KID'S FUN

HEAD Kid's bicycle line is a great first step for young riders looking forward to start mountain biking. All bikes have 6061 alloy frames, that helps us to make them light. Designs are colorful and they are inspired by the adult X-Rubi and JOY lines. Even the youngest kids will find something special for themselves, the smallest bike in our offer is built on 16" wheels.

Your kid will never get bored of his HEAD bike.
