MAKE AN IMPACT

Blame it on the economy and the accompanying back to basics mentality. Or praise public awareness of green issues and the value of low-impact lifestyles. But all of a sudden bicycles are a Very Big Deal. Everyday people--folks who haven't been on a bicycle in years, if not decades--have suddenly rediscovered the thrill of cycling. For us, passionate cyclists who strive daily to deliver products that get people of all ages, abilities and aspirations to love bikes and biking just as much as we do, it doesn't get any better than that.

The bicycle is a marvelous invention, with an impact that is almost completely, one hundred percent positive. For individuals (exercise!) as well as for the environment (reduced carbon footprint). A bike is one of the world's most powerful instruments for change. We know because cycling forever changed our lives, and we've seen it change the lives of so many others. That's why we want to make cycling converts out of everyone, and that's why there's a Jamis for nearly every cycling arena, for almost any rider.

It's that passion for cycling and everything cycling can do that fuels and sustains our efforts to build the best possible bikes. It's why we build category-defining superbikes that put professionals atop podiums at road races and mountain bike events. It's why our computers are humming day and night crunching FEA data and carbon fiber lay-up simulations. It's why we devote precious R & D resources to making even our kids bikes and cruisers as light and easy to ride as possible. And why our 2016 lineup is clearly the best we've ever produced.

But we're at this not just to build better bikes. We're in this to build better lives, to make YOU better. That's pretty heavy. It's a lot to carry on two wheels. But that's how powerful a bicycle can be. And that's why we're so committed to building the best bikes possible.

When people ride bikes, good things happen. Experience it yourself, on a Jamis.

MOUNTAIN BIKES

DEFCON

The devil is in the details. This is where the 27.5" wheel size really shines: on a 160mm travel all-mountain enduro machine. Utilizing our proven mp4 suspension for pedaling efficiency, with modern geometry and top-level suspension to tackle bigger hits and aggressive descents at higher speeds. This progressive suspension design delivers plush rear wheel traction while still resisting bottom out. Rear thru-axles, short chainstays and roomy front centers provide stiffness, quick cornering and playful handling. If you want to do it all, fast, this is the bike.

DAKAR XCT

This is the bike that teed it up and kicked it off way back in 2009. After all the nay-saying and "it's not really exactly between 26" and 29", the world is now clearly embracing the 27.5" wheel. And there's no better place to start the group hug than on the rig that believed from the beginning and now has over 7 years of development and real-world riding and refinement to ensure it IS Best in Class.

DRAGON

We wrote the book on off-road steel. Over 30 years of it. These Dragons might look like retro rigs, but there's nothing outdated or outmoded about the way these bikes ride with 120mm travel forks from Fox and Rock Shox. The Dragon frame gives as much as it gets: the harder you push it, the better it feels.

Teal Fo' Real

DRAGON PRO

FRAME

KOMODO

If you thrive on connection to the trail, if you live for the flow of a screaming descent -- Komodo will take you there without the added weight and complexity of dual suspension. This is an all-the-time trail hardtail with slack head angles plus 5" of fork travel for high-speed handling, robust frame tubes and thru-axles for big landing durability, and 27.5" wheels for smooth roll-over and agility.

KOMODO PRO

PLUS/FAT TIRE

Slay all terrain. Combine big wheel roll-over-everything capability with the traction of 3" tires, steel's trail-taming ride, short chainstays and slack trail geometry and it's big grinnin' all day. Ample tire clearance, rack mount eyelets, triple water bottle mounts, dropper post routing, full length cable housing and sliding dropouts add to the versatility for adventure and bikepacking. Load up, spin the cranks and leave the world behind.

Jack Pine

DAKAR XCR

Bigger wheels roll easier over stuff and nothing soaks up more trail with more efficiency than our XCR's. The XCR 29's tapered head tube and steerer, 15mm thru-axle fork, 12 x 142mm thru-axle rear, asymmetrical stays and over-sized BB shell all contribute to a firm, responsive pedaling platform that doesn't waste a watt of climbing energy or hold you back when the going's fast.

DAKOTA

The Dakota series is the hardtail standard for high-speed racing or long, epic days on the trail. For the Team, Pro and Race, we've taken our years of experience manufacturing carbon fiber Dakar XCR dual suspension frames and Xenith road racing frames and applied it to the big-wheeled world of 29'ers. For the Comp and Sport, it's the same race-inspired geo welded up from triple-budded 6061.

NEMESIS

Want a bike more capable than you are? This is the one. Nemesis is the perfect XC race weapon or 12-hour marathon bike. The 27.5" wheel size is not a compromise between 26" or 29": it's the best of both worlds. It rails singletrack, sticks to the trail on descents and climbs, excels on hardpack and in loose stuff, floats over trail chatter, you name it. It's the bike you never knew you always wanted. Available in 5 models for 2016 - 3 carbon fiber and 2 alloy.

DAKAR® XC

Full suspension and larger diameter wheels and tires open up a whole new world of speed, roll-over capabilities and control off-road. Modernized with 27.5" hoops in 2015, this is the frame platform that's won us numerous industry accolades and Bike of the Year awards since we first introduced our Dakar dualies back in 1994. The suspension system is time and race proven and very similar to the design of our mp4 XCR's, with performance not that far removed from XCR-level.

DURANGO

These may be the most affordable 29'er in our stable, but there's nothing entry-level about the performance of these bikes. We've taken the frame styling of our popular Trail X-series bikes and married it to our proven Dakota 29 geo. Best-in-Class performance and Big Hoops doesn't have to mean Big Bucks and the Durango Expert, Comp and Sport prove it.

TRAIL X

Building great recreational-level bikes that ride much like (and look a lot like) our hi-end bikes is a passion at Jamis. And no bikes showcase our commitment to do just that better than these bikes. The Trail X chassis emphasizes all-day performance with quick handling that's not overly darty. But make no mistake, if you want to throw down, the Trail X is more than able to keep up thanks to 27.5" wheels, precise shifting drivetrains and incredibly powerful disc or linear pull brakes.

ROAD BIKES

RENEGADE

The Renegade is ready for any adventure, no matter which Renegade you ride. The long and tall endurance geometry is designed specifically to ride comfortably all day on the road or in harsh conditions off-road. The smooth ride of the full carbon fiber Expert and Elite bikes introduced last year set the bar for how we wanted the new-for-'16 steel Exploit and Expat and aluminum Exile to ride this year. With disc brakes and the ability to mount a 40mm tire, these bikes are ready to go just about anywhere. All you need is the desire to push, pedal and explore.

GO WIDE

The BB386 EVO bottom bracket design amplifies the benefits of the proven BB30 system. It takes the lighter, stiffer 30mm alloy spindle of the BB30 design, incorporates press fit bearing cups instead of direct fit bearings and marries it to a wider 86.5mm BB shell. All without changing Q-factor. Why a wider shell? It allows us to increase the diameter of our seat and down tubes at the BB shell a full 30%, for increased stiffness where you really need it. We can also optimize chainstay design with both increased diameters (stiffer!) and wider spacing (more tire clearance!). Our new design gives you the ability to mount a full-bodied 40c tire.

AS CLOSE TO CUSTOM AS IT GETS

The goal was to produce the ideal adventure ride identically for all frame sizes. Of course we began with size-specific tubing diameters, a concept we pioneered decades ago. Then we blew up the mold department with requests for 3 different fork offsets, 3 different BB drops, 3 different rear-center measurements and 2 rear triangle sizes.

We ensured stack and reach was consistently stepped from frame size to frame size. Then we tuned lay-ups by frame size. The result is a bike with ride qualities that are virtually cloned from 48 to 61.

KEEP IT ON TRACK

ECO stands for Enhanced Compliance Offset. The ECO fork blades are swept forward a few millimeters to provide vertical compliance for a more comfortable and controlled ride without any compromise to lateral stiffness, thanks to the reinforcing rib on the inside of the fork legs. Integrating a 15mm thru-axle into the fork amplifies the benefits of the ECO design by reinforcing lateral and torsional stiffness, counteracting the influences of disc-brake torque, which keeps the front wheel tracking exactly where you're steering it.

XENITH

"As good as it gets" is never good enough at Jamis. And our Xenith series proves it. The Pro-circuit proven Xenith platform lets you scorch steep climbs or make up time on switchback descents with an SPV-molded, high modulus carbon fiber monocoque frame that's so ride-tuned and gram-lean it's truly a magic carpet to the podium. These are no-excuses race machines, obsessively built so you can sprint with 100% commitment, throw yourself into corners with absolute confidence and still enjoy smoothly forgiving ride quality.

ICON

We knew the Icon was a winner when we first introduced it three years ago and back-to-back Editor's Choice awards from Bicycling Magazine in 2013 and 2014 proved it. It's not too hard to figure out why. With an alloy frame that is just as light as our carbon fiber Xenith Comp and a frame geo inspired by our peloton-proven Xenith Team, the Icon sprints like a missile with a "connected" road feel that inspires confidence.

Brushed Aluminum

ICON ELITE

SUPERNOVA

Over the barriers, through the mud, to the podium we go. On a Supernova of course. The carbon fiber Team and Elite versions of this perennial CX winner are guaranteed to have you reigning in the wet and muddy stuff. And with a parts package identical to the Supernova Elite, so too will the aluminum Nova Pro. All three have been upgraded for 2016 to include 12 x 142mm thru-axle rear wheels so every watt your throw into the pedals pushes you to the podium faster.

ENDURA

Our Enduras are a favorite amongst Gran Fondo and century riders, distance cyclists and racers looking for an edge on rough or steep courses. And it's no surprise why. Borrowing heavily from our race-winning Xenith Competition geo, the Endura strikes a balance between performance, comfort, compliance and capability. Every Endura model features all the performance and design attributes of our racing bikes with slightly taller head tubes, longer wheelbases and slightly relaxed frame angles. Fast, long, steep and rough rides can now be enjoyed, not just endured.

ALLEGRO

Musically speaking, Allegro means quick and lively. Which exactly characterizes the spirit of our Allegros: fitness bikes that are lively, quick and seriously fun to ride. Our Allegros blend the speed and efficiency of a road bike with the heads up riding position many people prefer. The combination of road bike drivetrains, flat bar shifters, lightweight aluminum frame and carbon fork means you can Gran Fondo it on the weekend, then race through traffic during the week.

DXT

The new DXT's are pumped-up, go-anywhere/do-anything versions of our Allegro fitness bikes. With more gearing range to take on steeper hills and tougher terrain. Wider tires with a trail-capable tread for access to more riding areas, both paved and packed. And disc brakes and suspension forks for real off-road exploration and off-pavement adventure.

RECREATION BIKES

CITIZEN

Comfortable, enjoyable mobility: that's Citizen. This is the ultimate low-carbon-footprint, sight-seeing machine. It's a low-impact and fun workout for new cyclists and a zero-emissions way to get around town. We can't think of a better way to be a good Citizen.

HUDSON

Think of our Hudsons as part Explorer and part Earth Cruiser. Capable but cool. Casual but on it. We blended the flowing curves and shaped tubes of seemingly disparate platforms like our carbon Dakota 29'ers and our aluminum DXT's and came up with a smart frame design that rides comfortably, casually and efficiently while making a bold statement all at the same time.

EXPLORER

The Explorer has been one of our best-selling bikes, ever since its introduction in 1982. Originally designed as a mountain bike, the Explorer has since evolved into a very practical and very comfortable sport comfort bike. Inspired in part by our Hudsons and Citizens, without sacrificing the versatile on or off-road competence of the original Explorer, the newest generation Explorer is all about getting the most fun out of the ride, in STYLE, with performance and comfort features that make getting around so effortless it hardly feels like exercise.

CRUISERS

We designed our Earth Cruisers to be kinder, gentler versions of our sport comfort Explorers. They're simplified with easy-to-use one or three-speed coaster brake drivetrains without the complications of derailleurs or hand brakes to fiddle around with. In spite of their name, they're not just for riding at the beach. They're for any rider anywhere looking for a simple, lightweight, low-maintenance, good looking bike they can casually and comfortably pedal around town all day, every day.

YOUTH

With the right start, cycling can be a lifelong pursuit—we know it's true because that's how it worked out for every one of us here at Jamis. We know just how important that first bike can be, and that's why our kids' bikes are some of the most important bikes we design and build—because if we've done this right, that first riding experience will be so fun it'll carry through for the rest of their lives.
