MARIN
MOUNTAIN BIKES

PALISADES TRAIL

The Palisades Trail is a great Mountain Bike. First, we designed a frame that would handle quickly, predictably and safely in all conditions. Then we chose components that would offer smooth, effortless shifting and

pedalling. Bio Pace, Hyperglide and 21 speed systems are used to their full advantage on this top Mountain Bike. Finished in bright neon blue, the Palisades Trail will look even sharper off road than it does in the showroom.

BEAR VALLEY

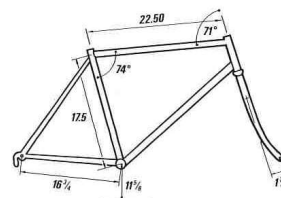

The Bear Valley's monochrome good looks stand out strongly in a world of wild and crazy colours. It's aimed at the enthusiastic Mountain Biker with all the design and geometry of our top line bikes. Handling is fast, responsive and

utterly predictable. When you ride a Bear Valley you'll know why Marin Mountain Bikes are the great Mountain Bikes.

MARIN
MOUNTAIN BIKES

MARIN MOUNTAIN BIKES – FROM TOUGH TRADITIONS COME PEAK PERFORMANCE

The pioneering days for Mountain Bikes go back to the early '70's. That was when local cyclists in Marin County modified their 50lb clunkers to cope with the rigorous ups, and more particularly the downs of the 2000ft descent in the legendary Repac Race.

Since those early days, virtually all the major developments that lead to today's Mountain Bikes have taken place in Marin County, the most natural test track in the world.

Marin Mountain Bikes have their headquarters in the heart of this dynamic and inspiring county at San Rafael.

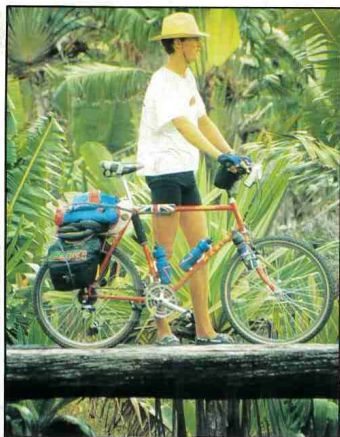

The names for all our Mountain Bikes have been taken from the famous trails around Marin County.

MARIN COUNTY
Home of the Mountain Bike

MARIN MOUNTAIN BIKES WIN WORLDWIDE RECOGNITION

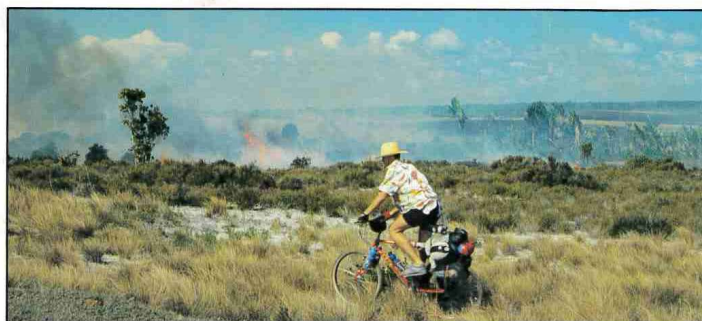

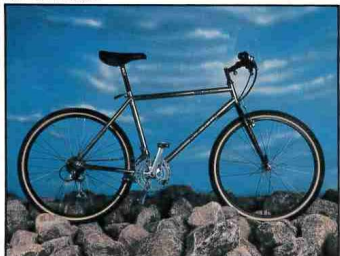

At Marin we take great pride in producing top line quality Mountain Bikes. Our testers, designers and racers put all their efforts into making Mountain Bikes that perform effortlessly, reliably and predictably in all conditions.

But what lies at the heart of every Mountain Bike? – the frame. It is the design of the frame and it's geometry that gives all Marin Mountain Bikes their unique handling. You don't have to ride ours for long to appreciate the difference between a good Mountain Bike and a great Mountain Bike.

Many of the features incorporated into this year's exciting range have come from the world beating Marin Team Titanium. This remarkable machine has been universally

Marin Team Titanium

Crossing Madagascar on a Palisades Trail

praised by leading magazines around the world. So when you ride a Marin Mountain Bike you know that it's handling and performance represent the best that money can buy – at any price.

THERE'S MORE THAN MEETS THE EYE IN EVERY MARIN MOUNTAIN BIKE

Every Marin Mountain Bike has quality built into the design. We look at every aspect of a bike's handling and try to improve it. Tubing, forks, dropouts and components all combine to create a moving masterpiece.

Forks are ovalised in the mid section adding stiffness around the cantilevers giving controlled responsive steering and greater strength – Lugless, triple butted seat tubes have a thicker internal diameter at the seat collar allowing smoother up and down movement of the seatpost – Vertical rear dropouts keep the rear wheel in exactly the right position for precise index shifting – Heavy duty 2mm brake cables gives finger light control even in the toughest of situations – Slotted cable guides allow for

easy cable maintenance – Cantilever brakes weigh less, give progressive braking and avoid clogging – New geometry improves all aspects of off road handling.

So if you're looking for a Mountain Bike, look at Marin – they're more than just good looks, and we've a range that spoils you for choice.

Mountain Bikes are not indestructible. Excessively rough use may result in damage to yourself and your machine – take care.
