

MARIN MOUNTAIN BIKES

COLLECTION
92

MARIN MOUNTAIN BIKES offices are located in San Rafael at the base of Mt. Tamalpais, in beautiful Marin County. The birth place of mountain biking.

Mountain biking all got started in the early 70's when a group of crazed Marin cyclists started to race their bikes down their favorite trails on Mt. Tam. They began fitting gearing to their bikes so they could get back up the hill without having to call for a friends truck.

Marin is still the place where mountain biking's major developments take place. Marin's scenic backdrop & fabulous riding conditions continue

to draw racers, bike enthusiasts & designers alike, to the home of the mountain bike phenomena.

To remind you of our Marin heritage, we have named our bikes after the most famous trails in Marin.

It's been our company policy to offer serious, high quality mountain bikes that work. Excellent performance, race oriented designs and innovative technology is our ongoing goal.

At MARIN we've spent many years working towards our ultimate goal...

THE PERFECT MOUNTAIN BIKE...

FRAME DESIGN

We don't cut any corners here! On all **MARIN'S** bikes you will find only high quality Japanese **Tange** crommo tubing. We don't use "no-name brands" or "house brand" tubing. For '92 we worked with **Tange** to create a new lighter and more durable frame tubing. Our custom gauge .8mm wall thickness seat stays coupled with new lighter bulge butted seat tube and smaller diameter top tube drops ounces where they're not needed.

The first company to use a sloping top tube design in a production bike, **MARIN** continues to use this design on all of our models because it allows better stand over clearance and the use of shorter tube lengths for a stiffer, lighter and better handling frame. Notice all of the other companies that have switched to the sloping top tube design that we pioneered in 1987.

At MARIN, you'll find the difference in the frame.

Our exclusive "**Afterburner**" rear triangle uses our own design **Tange** custom constant diameter seat and chain stays. Constant diameter stays give a more solid mounting location for the brakes and offer a torsionally rigid design for accurate steering and efficient pedalling.

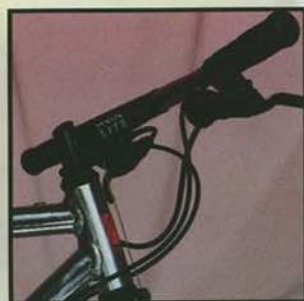

The **MARIN** investment cast dropouts connect to the stays with 360 degree contact at the chain and seat stays. For '92 we've dropped 20% off the weight of the dropouts yet this still gives a much stronger connection that adds to the solid feeling of a **MARIN**.

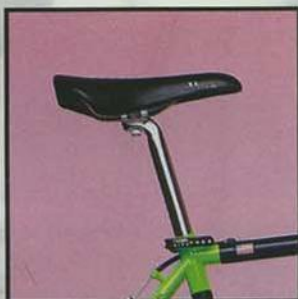

The **Tange Ultimate Ultrastrong** tubing features external ribbing that increases the stiffness and durability of the tube making a difference you can see as well as feel when you ride. All of our light gauge Prestige tubed frames have the gear cable braze-ons attached on the head tube to eliminate the heat affected area on the down tube.

After we worked so hard on the design of our bike frames we couldn't put just any components on them. So we made our own component group for '92...**MARIN LITE**

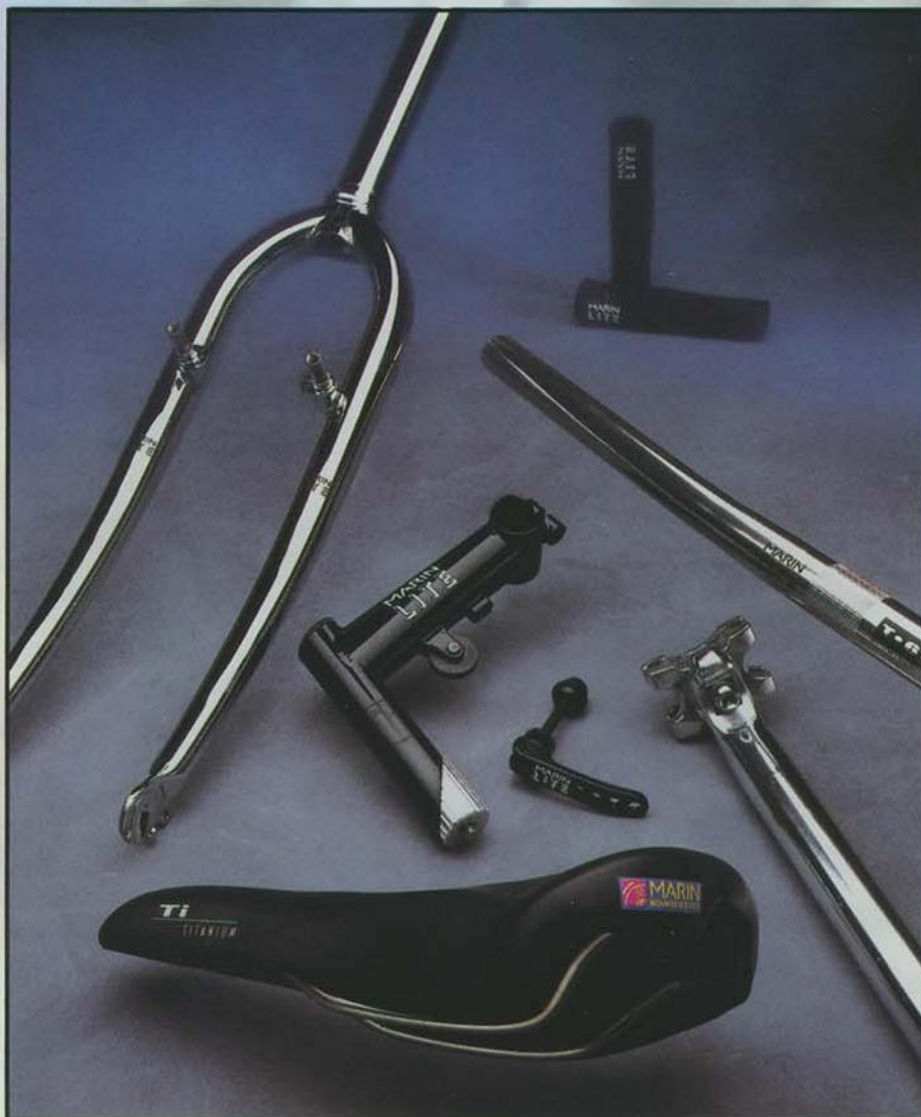

For 1992 **Shimano** has really improved on their under the bar shifters with the **New Deore XT 095** trigger shift levers. These new levers use a push button to shift up to larger cogs/chainrings and a trigger lever to shift down to smaller ones. It features a new low profile design that is not only cleaner looking but considerably lighter than the 91 version. This system works so well that we used it beginning with our mid-priced Eldridge Grade all the way up to the top of the line. **Shimano's best improvement for 1992.**

The **MARIN LITE** group consists of: a seatpost QR that has a drilled aluminum handle and weighs only **38 grams**, a seatpost that is heat treated for strength and weighs **255 grams**, a stem with a recessed wedge bolt that weighs **308 grams**, a heat treated handlebar with internal ribbing for strength that weighs only **170 grams**, titanium railed saddle to absorb off road shock with a weight of **245 grams**, and high density **40 gram** grips. All of these components are made to be as durable as they are lightweight.

MARIN LITE

MARIN LITE Handlebar - Constructed of T-6 heat treated aluminum. An unbeatable combination of stiffness and strength that weighs only **170 grams**. Black or Titanium plated finish. **Race version**-(shown below) At **133 grams** these are the lightest T-6 heat treated alloy bars around! Only for riders under 160lbs. Black or Clear anodized finish.

MARIN LITE Stem - New for '92 we recessed the wedge bolt to save weight. A 10 or 15 degree rise offers perfect offroad positioning. This cromo roller stem weighs only **308 grams** (135mm). Black

MARIN LITE Saddle - Our new **Titanium** railed leather saddle is 30% lighter, absorbs more shock and is stronger than steel railed saddles. At only **245 grams** its a great way to save weight and increase comfort.

MARIN LITE Seatpost - This handsomely finished seatpost is made from 6000 series forged aluminum,

clear anodized and heat treated to increase strength. At **255 grams** this is as light as any on the market.

MARIN LITE Seatpost Quick Release - This **38 gram** unit has a drilled aluminum lever with a cromo skewer. This ultra lite unit "Really Works", with a familiar lever action.

MARIN LITE Fork - This triple butted cromo fork with forged dropouts and beveled ends offers smoother ride, maximum strength and superior control.

MARIN LITE Grips - Hi-Density foam grips offer something great to grab on to at a featherweight of 40 grams.

SUSPENSION

MARIN is offering two options in front fork suspension. The **Rockshox MAG 20** or the **Manitou by Answer**. These two options were made after serious race testing by the **MARIN PRO RACE TEAM**.

The **Rockshox MAG 20** features oil damping with a 6 position dial on each fork leg for easy adjustability. No more air adjustment!

The **Manitou** features rubber elastomers for damping with almost no maintenance. Five different elastomers are available to give you the ride you're looking for.

Both forks are shown on our top of the line Team Issue and Team Marin Bikes, but are available on any model.

TEAM TITANIUM

Marin has always been a leader in Titanium technology and '92 is no different. The new matte finished rear triangle and head tube increase weld strength fatigue life by **200 to 300%**. The bead blasting used in the matte finish also relieves the stress in the welds. Polished main tubes add to the exclusive look. The frame is constructed of **Ti 3 2.5 Titanium alloy**. The best frame available needs the best parts, so we spec'ed it with the brand new **Shimano 24 spd XTR** group and the full compliment of **MARIN LITE** components. This **23 lb.** bike is the ultimate bike for the ultimate ride!

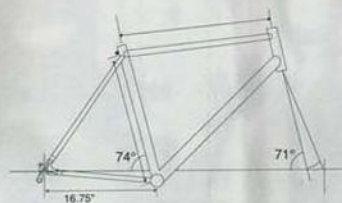

Also available as frame only

TEAM TITANIUM 1992 Shimano XTR
15.5", 17.5", 19.0", 20.5" Sloping top tube

TEAM MARIN

Made of **Tange Ultimate Prestige** tubing, the external ribbing on the down tube adds stiffness, strength and saves weight. The **Team Marin** utilizes the shock absorbing advantages of the **Sakae Titanium** handle bar and our own **Titanium Railed** saddle and comes equipped with the **Shimano XT** component group, **XTR front Hyperglide** crankset, **MARIN LITE** component group, and **RM 400** 32 hole rims built with **WheelSmith** 15 gauge spokes and alloy nipples. Weighing in at an incredible **24.5lbs**, it will get you to the front of the pack.

SAUSALITO

The **Sausalito** is our best hybrid. It uses **Shimano's** brand new, made for hybrids, CX 500 group with their new no-maintenance bottom bracket, and **Araya's** alloy rims with aggressive 700C x 35C knobby tires. The frame is constructed of **Tange** crommo tubing for the extra durability that you need. This bike is perfect for that quick trip down the bike path or that tough climb up the mountain and at a cool **26.9 lbs** it's the hybrid bike to have.

Brake Cable Adjusters - Crank Bolts

Cantilever Brake Attachment Bolts

Rockstar Sierra features a wide open knobby tread pattern for the best traction in the loose stuff. Also available in a **Kevlar** bead for the ultimate in lightweight tire performance. 2.1"

Marin Rockstar was picked as one of MBA's 3 favorite tires and for good reason. It's solid bar center lug digs in where other tires just scratch at the surface. Also available in **Kevlar** bead. 2.0"

Procombo is a great combo tire. Offering an aggressive tread for offroad traction but the center ridge is designed for a smooth on road ride. 2.0" steel beaded only
