IBOC[®] AMPLIFIER™

de. "The Mongoose Amplifier has awesome rear suspension." *Mountain Bike Action*

de. "My moment of revelation came on a tortuous, rocky descent, with loose, baby-head-sized rocks." *VeloNews*

de. "On rough roads and rooted climbs, the Amplifier can walk away from most other bikes." *Mountain Bike Action*

de. "All in all, the Mongoose Amplifier ranks among the world's very best full suspension bikes." *Bike-Germany*

de. "This is one of only a handful of suspension bikes that can be used to their fullest on cross country rides as well as downhill." *Mountain Bike Action*

de. "The world around you becomes a blur, and you know you are going very, very fast. All it took for me was that one moment: I became a believer." *VeloNews*

de. "The Amplifier tracks better, climbs more efficiently, and is so smooth over the rough stuff that I call it the "flying couch".
Sara Ballantyne, Mongoose Pro Racer

de. "The Amplifier is the best fully suspended race bike available, period. And I've ridden them all.
Brian Lopes, Mongoose Pro Downhiller

IBOC® TEAM SX

THE BOTTOM LINE ON BONDING.

Over the last three years, we've developed a new process for frame bonding. Using technology from the defense industry, we've gone beyond the confines of traditional methods to create superior bonded carbon fiber and aluminum frames.

Our patented process uses aluminum lugs that are crafted with "step construction", allowing precise adhesion between Mongoose's "stepped" lug, the aerospace glue, and the "stepped" tube wall. This interface eliminates any bonding porosity. The progressive taper of the lugs to the tubeset transfers a calculated distribution of load stresses through the lugs and along a much longer load bearing area than traditional frame building methods.

A Mongoose proprietary process eliminates the "galvanic corrosion" that plagues many bonded carbon fiber frames. The connection is for life.

Bottom line: IBOC frames are light and strong. Their handling characteristics are almost telepathic. They'll provide a lifetime of performance - we guarantee it.

IBOC Bonded Mountain Frames: Team SX, Pro SX, Comp SX, Comp.

IBOC Bonded Road Frames: Champion, World, Road, Crit.

- Mongoose Spectrowrap 100% carbon bonded suspension-specific frame with alloy forged lugs
- Mongoose AMPLIFIER SL suspension specific fork with aluminum steerer
- New Shimano Deore XT group featuring Hyperdrive-C gearing
- Shimano Deore XT SPD clipless pedals
- New Shimano Deore XT suspension-specific front hub
- New Panaracer Smoke/Dart Hard Core kevlar tires
- ZOOM competition stem, bar, bar ends

WHY CARBON FIBER?

Carbon fiber frames are light, stiff, forgiving and strong. Combined, these qualities offer the perfect balance of performance and comfort.

A less admirable quality of carbon fiber frames is the "galvanic corrosion" that occurs between aluminum lugs and carbon fiber tubes when bonded with traditional methods. As part of our alliance with defense department suppliers, we've developed a patented process that eliminates this reaction. These frames won't fail - we guarantee them for life.

Our custom-made carbon fiber tubes are among the lightest in the industry and definitely the strongest. Mongoose "Spectrowrap" tubesets use a nine layer, tube-specific, lay-up construction that matches fiber orientation to the unique torsional loads that each joint carries. It's a costly, labor-intensive process that provides unparalleled performance.

IBOC Bonded Mountain Frames with "Spectrowrap" carbon: Team SX, Pro SX.

Mongoose frames are measured "Center-To-Center" (For example: the seat tube measurement is taken from the center of the bottom bracket spindle to the center of the top tube where it intersects the seat tube) The AMPLIFIER frameset is measured "Center-to-True Horizontal" (Where the top tube would intersect the seat tube if the top tube was parallel to the ground).

A photograph of a person riding a mountain bike through a large waterfall. The person is wearing a blue shirt, dark shorts, and a blue helmet. They are positioned in the lower-left quadrant of the frame, riding towards the right. The waterfall is composed of multiple cascades of water over dark, wet rocks. The water is white and frothy as it falls. The background is filled with the sound and sight of the falling water. A large, dark grey rectangular box is overlaid on the top-left corner of the image.
