

reshape this for better coverage, and it's OK to lose the countour with the front edge.

lengthen strap 2-inches so it'll reach with a too-big load, still.

these balls are groovy, likem a lot, couldn't fine or-ange. But it just occurred to me that you got orange because you got them at Home Depot. We may do that too, for the orangeness, but we're going to get 9-10 inchers, and both Dave and I have ordered them already, but in black. I like the orange, but we'll see how it goes. Some wouldabeen customers may squawk at the plastic balls, but the grommet there will let them use something more traditional..like Zip-Ties! Or whatever. Anyway, the balls work great.

put one of these in the bottom of each pouch as a drain hole. smaller is OK, doesn't matter...and reinforce as necessary or IF necessary so it doesn't rimp at the edges. I think this fabric can support a grommet, but be quadruple sure. thanks.

is it paranoia based on bad brains or a good idea to make this whole underside one piece of fabric? I don't mind the cost-due-to-waste; I just want it never to fail at a seam in 25 years or so. You know how these bags are stitched and riveted, so it's your call...but all things equal, one-piece seems groovier. We don't have a quote yet anyway, but I can handle a bit of an upcharge... Think about that and if I'm being too weird and just don't know, then stick with this.

G

rivet or stitch on a 3/4-in tall x 2-in wide leather or web strap for a red blinky light.

This may be a "one side only" deal too, or I may cave in to the resident symmetrists and England-Japan sympathizers and go both.

position as you see, visually. exact distance above botton no matter, but about like this.

i've got some 2--inch 3M coming, otherwise same as the other. At the last minute I may request none on this right-side pannier, and either a big one or two on the left. I'm fine with the asymmetry, and it makes sense.
