

6. TOP TUBE.

Aha now, slightly tricky. The seat tube is the only tube that's NOT measured center-to-center (except on some Italian frames). In any case, when you draw the frame, you draw the centerlines. So you have to factor in the diameter of the top tube and the angle. If your top tube is 28.6mm (as are ours), just subtract 14.4mm (from your center-to-top frame size to get the c-to-c dimension, which you mark here. Or forget it, and just draw your frame center to center.
