YOU'RE A BETTER RIDER THAN YOU THINK

StumpJumper

IT'S NOT JUST A NEW BICYCLE, IT'S A WHOLE NEW SPORT

Specialized has taken the 26" balloon tire format and applied modern lightweight racing technology to create the Stumpjumper.

The design of the Stumpjumper emphasizes rugged strength and responsive handling. The 68.5/70 degree frame geometry and raked forks give the Stumpjumper handling characteristics which are superior to traditional off-road bikes. A rugged cantilever braking system with heavy-duty motorcycle cables and Tommaselli levers provide sure stopping power under the heaviest of loads. Custom "dishless" 4X wheels with 14ga stainless steel spokes, Specialized sealed bearing hubs, and Araya alloy rims will stand up to years of rugged off-road use and abuse. A triple (26, 36, 46) cotterless crankset and a wide range 5-speed cluster (14, 17, 21, 26, 30) give the Stumpjumper the wide range of gearing necessary for the varied requirements of trail and street riding.

The Stumpjumper has a complete set of braze-ons; no clamps are required. The braze-on assembly includes: front and rear dropout eyelets, custom seatstay rack mounts, all cable guides, and two water bottle mounts, and threaded mounts for fenders.

The new Stumpjumper Sport model offers the excitement of off-road performance for the more price sensitive cyclist.

ALLEZ

GETS YOU THERE FIRST WHEN IT COUNTS

The Allez represents the state-of-the-art in road racing frame design. To create this racing frame, we've selected blended gauges of premium double butted chrome-moly tubing and specified a geometry that allows the racer to be maximally efficient and in perfect communication with the machine.

A fast steering geometry and a slightly steeper seat tube are used for responsive handling and a more aerodynamic riding position. Brake clearances are extra close and the investment cast fork is offset so that there's less bend in the fork blades, for lighter, stiffer front end. Oval chainstays, oversized seatstays, a rigid downtube, and a compressed rear triangle geometry make the Allez a rigid yet responsive machine for all road and criterium competitions.

Also available by special order; Allez track bicycles and the Allez-Shimano AX Aero bicycle, with special round/oval tubing.

SEQUOIA

PERHAPS THE FINEST TOURING BICYCLE YOU'LL EVER RIDE

The Sequoia is a contemporary sports touring bicycle. Its design permits exciting response for club riding without sacrificing the stability and strength for extended touring.

A special blend of premium chrome-moly tubing in individual selected gauges gives the Sequoia its exceptional liveliness and versatility.

Sequoia framesets come in a wide variety of sizes, from a petite 47cm to a giant 68.5cm. Each Sequoia comes with all the conventional braze-ons, plus; brazed-on eyelets in the seatstays to accommodate a Blackburn seatstay rack; threaded dropouts for rack or mudguard mounting; downtube boss for downtube or fingertip shifters; three sets of water bottle mounts, (the third is underneath the downtube); and a handy chain holder brazed to the right seatstay.

The Sequoia's look as good as they feel. Contemporary styling is displayed in the fluted seatstays and investment cast semi-sloping fork crown. Dropout faces are chromed as added protection.

EXPEDITION

AT LAST, A FULL TOURING BICYCLE FOR THE SERIOUS LONG DISTANCE RIDER

Specialized has added another model to our tremendously successful bicycle line. Take a moment to examine the Expedition frameset; The relaxed, comfortable frame angles and long, stable wheelbase. Notice, the attention to detail: The vertical dropouts, threaded fender mounts, braze-ons for a Blackburn seatstay rack, and front lowriders. Internal generator wiring, and mounts for three water bottles.

Consider our choice of componentry: Massive forged cantilever brakes. A forty spoke rear wheel. A wall-climbing eighteen speed drivetrain with flawless half-step-plus-granny gearing. Specialized sealed hubs, sealed bottom bracket, and even a Specialized channel seal headset.

And it's all sized to fit you. Exactly. Stem length, crank arms... even the size of the toe clips. We know it has to be right. Because, for the Expedition rider, touring is much more than just "getting there".
