

WTB was founded in Marin County, California in 1982, fueled by the need to create durable and reliable off-road specific equipment. Back then mountain biking was a new and burgeoning sport, and mountain bikes weren't much more than cobbled-together oddities. The original WTB crew was captivated by the experience of riding bikes on dirt trails, and they started creating more durable and functional components for their own bikes. Soon, local frame builders sought to outfit their bikes with WTB's high-end components. WTB was able to turn its passion for bikes into a successful business.

Today WTB is a global enterprise; our innovative components are used for trail riding, transportation, recreation and elite racing across the globe. After 26 years things have changed a bit here at WTB—our little garage has morphed into a real office and the bikes we ride and the components we make have evolved to meet the needs of today's riders, racers, and commuters. What hasn't changed is our passion for riding and our commitment to providing the cycling community with durable, reliable, high-performance components.

DNA RUBBER COMPOUND

WTB's fast-rolling 60a durometer rubber compound is specifically formulated for high-performance riding in a variety of conditions.

DUAL DNA RUBBER COMPOUND

The centerline compound features 60a durometer rubber for fast rolling, precise steering and durability. The dense, slow-rebounding 50a durometer outer tread provides exceptional grip and shock absorbing properties.

SUPER TRACK DNA RUBBER COMPOUND

WTB's special blend of high-traction 50a durometer rubber provides sticky, solid traction for improved control in steep, loose conditions.

HIGH GRIP DNA RUBBER COMPOUND

The ultimate slow-rebound rubber compound, High Grip DNA conforms to trail elements for maximum grip. This 40a durometer rubber provides unmatched performance in technical conditions.

ROAD-TUNED DUAL DNA RUBBER COMPOUND

WTB's road-tuned Dual DNA improves both traction and durability by utilizing two rubber compounds. The firm centerline (62a durometer) provides long-lasting, fast-rolling efficiency and the softer shoulders (57a durometer) offer trustworthy grip while leaning into turns.

SIPING

Sipes are small incisions on a tire's tread. Siping a knob creates more working edges, which boosts traction in virtually any condition. Because WTB's high-end mountain tires feature shallow sipes, the knobs still stay firm under heavy loads and hard braking.

ARAMID BEAD

The Aramid bead provides greater bead-seat characteristics, while weighing in lighter than conventional wire beads.

CABLE BEAD

The Cable bead is an economical folding wire bead that is easier to install and of a higher quality than a traditional wire bead.

SUPER DUTY CASING

This thick-ply casing resists cuts from rocks and debris while damping impacts. Our Inner Peace sidewall reinforcement further protects the tire from damage, reduces sidewall flex and dramatically reduces pinch flats.

TPI

TPI stands for threads per inch. This number refers to the thread count in a tire's casing. A lower TPI indicates that thicker threads are woven into the casing, therefore making it more durable; a higher TPI indicates thinner threads are used, therefore making the casing lighter and more

pliable. WTB's 60 TPI race-level tires offer supple, shock absorption qualities while remaining resistant to cuts and tears. The Super Duty casing found on Team DH tires, by contrast, feature dual plies of tough 30 TPI casing.

TUBELESS

Designed to meet UST/ETRTO standards, WTB tubeless tires feature an Aramid bead with exceptional air retention qualities. Our tubeless tires also feature our high-performance DNA rubber compound.

WTB SPEED SHIELD

A thin, densely woven nylon belt sandwiched between the Solano's rubber contact patch and the casing. Speed Shield reduces punctures and improves roll characteristics.

TIRE PRESSURE

WTB recommends that tire pressure be checked before each ride. The acceptable pressure range for mountain bike tires is 35- to 65-psi (2.4- to 4.5-bar). Road Tires must be inflated to 100- to 130-psi (7- to 9-bar). City/Trekking/Hybrid tires must be inflated between 50- and 80-psi (3.5- to 5.5-bar). Tire pressure outside of these guidelines can result in a loss of control or, at the very least, poor performance.

OUTSIDE TREAD MEASUREMENT POINT
(62 MM) + / - 2 MM

EXAMPLE: 55 / 62

WOLVERINE ♦♦ NEW

USAGE: Cross Country / All Mountain
 CONDITIONS: Moist to Dry / Hardpack to Loose
 In the wild, wolverines are known to attack anything, often preying on much larger animals. On the trail, the Wolverine confidently tackles dicey descents, flies across flats and devours steep climbs. This fast-rolling tire's moderately-spaced tread pattern combines plentiful working edges that cling to hardpack and outside knobs that let you shred corners. Like its namesake, the Wolverine's slight profile belies its fierce bite.

 	SIZE	GMS	LEVEL	WEIGHT	DETAILS
	2.2	55/52	RACE	595g	ARAMID BEAD DNA RUBBER LIGHTWEIGHT CASING

RAIJIN ♦

USAGE: Cross Country
 CONDITIONS: Wet to Dry / Loose
 Named for the Japanese gods of lightning, thunder and rain, this square-block, mid-tread XC tire features an open, soil-clearing pattern that will deliver you to backcountry peaks and the top of the podium. The Raijin really shines in sloppy, muddy conditions.

	SIZE	GMS	LEVEL	WEIGHT	DETAILS
	2.1	50/52	RACE	495g	ARAMID BEAD DNA RUBBER LIGHTWEIGHT CASING

VULPINE ♦♦

USAGE: Cross Country Racing / Pump Track
 CONDITIONS: Dry / Hardpack
 Introduced in '07 and already a cornerstone in WTB's line of XC race tires, this agile semi-slick easily outruns the competition with its efficient, low-profile centerline. The Vulpine offers more than simple straight-line speed—its well-spaced outside knobs pierce loose soil, boosting control in corners. This lightning-fast tire is quickly becoming the premier choice for pump track bikes worldwide.

 	SIZE	GMS	LEVEL	WEIGHT	DETAILS
	2.1	50/52	RACE	530g	ARAMID BEAD DNA RUBBER LIGHTWEIGHT CASING

ALSO AVAILABLE IN 29"

NANO RAPTOR ■

USAGE: Cross Country / Dirt Jump
 CONDITIONS: Moist to Dry / Hardpack
 The Nano Raptor is an XC racing classic. The round-profile, micro-knob design and large supportive casing conquer rough racecourses and roll with the punches on long trail rides. The elevated centerline tread rolls quickly on asphalt and hardpack, while the numerous working-edges track predictably in "dust over crust" conditions. The Nano Raptor is a popular choice for short track XC races, dirt jumping and urban sessions.

 	SIZE	GMS	LEVEL	WEIGHT	DETAILS
	2.1	52/47	RACE	540g	ARAMID BEAD DNA RUBBER LIGHTWEIGHT CASING

ALSO AVAILABLE IN 29"

EXIWOLF ◆

USAGE: Cross Country / Trail
 CONDITIONS: Wet to Dry / Loose to Rough
 The ExiWolf is truly multi-talented. It combines the quick-rolling agility of an XC race tire with the consistent traction of a substantial trail tire. Featuring a deep tread pattern with loads of working edges and spikey, soil-piercing side knobs, the ExiWolf boasts impressive performance on any terrain, in any condition. It provides lively handling, predictable stability and tackles rocks and rough terrain with ease.

2.3 ALSO AVAILABLE IN 29"

MUTANO RAPTOR ◆

USAGE: Cross Country / All Mountain
 CONDITIONS: Dry / Hardpack to Loose
 The Mutano Raptor is derived by mating three of our most popular treads—we combined the fast-rolling centerline of the Nano, the aggressive square blocks of the Moto Raptor and the grippy working edges of the VelociRaptor. The result is a highly versatile and predictable tire that keeps its speed and traction on any trail. The 2.4-inch model actually weighs less than 600 grams, making it a real standout in the world of large-volume XC race tires.

	2.4	55/55		595g	

PHOTO: COLIN MEAGHER / RIDER: MARK WEIR

USAGE: All Mountain

CONDITIONS: Moist to Dry / Hardpack

Refined by pro-racer Mark Weir, the WeirWolf LT (Low Tread) is something of a Frankentire experiment gone terribly right. The LT couples the large-volume of a downhill tire with the fast-rolling, low-profile tread of an XC race tire, making it nearly as versatile as Weir himself. It performs in any discipline from XC to Super D to light-duty DH races—the wide casing soaks up trail chatter and the densely packed side knobs hold firm in corners.

ALSO AVAILABLE IN 29'

USAGE: All Mountain / Freeride

CONDITIONS: Wet to Dry / Loose to Rough

The Stout thrives in adverse conditions. The staggered square blocks provide an efficient centerline while the wide-open spacing allows the tread to pierce the trail when carving turns or braking. The softer, looser and rougher the terrain, the better the Stout performs with its exceptional stability and easy-lean transitions. The well-supported blocks stay firm on hardpack and asphalt too, but this tire performs best on rugged All Mountain terrain.

ALSO AVAILABLE IN 29'

USAGE: All Mountain

CONDITIONS: Wet to Dry / Loose

The square-profile, twin-knob design offers exceptional climbing grip and extra traction (XT) in a variety of conditions. The XT offers amazing control and stability in tight turns and under heaving braking. In loose conditions, the XT works best as a rear tire, paired with a Prowler MX, WeirWolf or Stout up front.

NEW

USAGE: Cross Country (2.1) / Freeride (2.5)

CONDITIONS: Wet to Dry / Loose to Rough

The MX (Motocross) utilizes the same aggressive transitions and outside knobs as the Prowler XT, but features a shifted center tread. The MX is a highly predictable tire at speed, boasting deep-piercing lateral grip in loose conditions. The 2.5-inch version excels on treacherous descents and high-speed chutes while the MX 2.1-inch thrives on epic, day-long trail rides.

PROWLER SS ♦♦ NEW

USAGE: All Mountain / Freeride

CONDITIONS: Dry / Hardpack to Loose

The Prowler SS (Slope Style) takes the square-profile, open design of the Prowler XT and doubles the central twin-knobs for greater rolling efficiency. Roll from singletrack to wooden skinnies to a row of tabletops with confidence. With DNA rubber compound and loads of siping, the SS boasts a healthy dose of traction along with straight-line speed. In hardpack conditions the SS performs best as a rear tire, paired with a Prowler MX, Prowler XT or WeirWolf LT up front.

	2.3	55/60	RACE	860g	ARAMID BEAD DNA RUBBER LIGHTWEIGHT CASING

MOTO RAPTOR ■

USAGE: Cross Country / All Mountain

CONDITIONS: Wet to Dry / Loose

The Moto Raptor is the proven go-anywhere, do-anything All Mountain tire. It dependably adapts to many riding styles and ride characteristics with terrific soil clearing ability. The Moto Raptor offers reliable performance while climbing, braking, and cornering year round. This is the tire pro racer Rachel Lloyd uses to crush her competition.

FRONT REAR

VELOCIRAPTOR ■

USAGE: Cross Country

CONDITIONS: Wet to Dry / Loose to Rough

The VelociRaptors are legendary mountain bike tires. They are quite possibly the most popular tires in the history of the sport. The front is renowned for its steering control, while the rear grabs the trail with predictable tenacity. After 13 years of diligent service, the VelociRaptors still shine as dependable front/rear specific tires.

TIMBERWOLF ♦

USAGE: Freeride / Downhill

CONDITIONS: Moist to Wet / Loose to Rough

The Timberwolf features a deep, moto-inspired tread that is well-suited for steep, loose and moist conditions. Its big, square-block knobs pierce into loose and sloppy terrain to provide optimal traction. Boasting powerful braking and authoritative cornering ability, these dual-directional tires provide instant go-big confidence.

	2.5	55/65	TEAM DH	1685g	STEEL BEAD HIGH GRIP RUBBER SUPERDUTY CASING

WEIRWOLF ◆

USAGE: All Mountain

CONDITIONS: Wet to Dry / Hardpack to Loose

Mark Weir's signature model, the WeirWolf, is built to carve aggressive singletrack. Lean into corners with confidence knowing that the large, transitional openings between knobs channel soil outward, while the ramped, claw-like center tread provides pro-level traction in all terrain types. Mount the WeirWolf for big mountain cross country rides, Super D races, or DH adventures and find out why Weir's always sporting that goofy grin.

DISSENT ◆◆

USAGE: Freeride / Downhill

CONDITIONS: Dry to Moist / Hardpack to Loose

The Dissent is the doctrine for FR/DH tires. Designed around the demanding conditions of the Whistler Mountain Bike Park, this tire features a hard driving twin-knob design, a robust casing and a muscular square-radius profile. The Dissent offers confident control on dusty, braking bump-riddled downhill tracks and rolls surprisingly well for its size.

GRAFFITI UK ♦ NEW

USAGE: Dirtjump

CONDITIONS: Pavement to Hardpack

The Graffiti UK (Ultimate Kombat) is WTB's premier dirt jumping tire. The aggressive UK uses large, flat blocks of tread for superb traction on the hardpack surfaces of dirt jumps and terrain parks. Although this tire shines in the dirt, the knobs are firm enough to rail urban environments as well.

	SIZE	GMS	LEVEL	WEIGHT	DETAILS

GRAFFITI SF ♦ NEW

USAGE: Dirtjump / Urban

CONDITIONS: Pavement to Hardpack

The Graffiti SF (Street Fighter) performs in the high-stakes environments of urban riding. Its wide, 2.2-inch casing absorbs hard hits and cased landings; the minimal, recessed tread offers firm grip on the street while channeling away loose soil at the dirt jumps. Add even more confidence to your street sessions by choosing the Team DH version, with its Super Duty casing and High Grip DNA rubber.

STOUT 29er ♦ NEW

USAGE: 29" All Mountain

CONDITIONS: Wet to Dry / Loose to Rough

The most aggressive tire in WTB's comprehensive 29er line, the Stout 29" performs in soft, loose and rough terrain with exceptional stability and easy lean transitions. This tire's staggered, square blocks provide an efficient centerline, while the open spacing allows the tread to pierce soft soil when carving turns or braking. The well-supported blocks stay firm on hardpack and asphalt, too.

	SIZE	GMS	LEVEL	WEIGHT	DETAILS
 	2.3	55/60	RACE	1150g	ARAMID BEAD DNA RUBBER LIGHTWEIGHT CASING

VULPINE 29er ♦♦ NEW

USAGE: 29" Cross Country Racing / Dual Sport

CONDITIONS: Dry / Hardpack

WTB pioneered the world's first 29er tire in '99 and with the new Vulpine 29", we introduce the first 29er semi-slick. Bigger wheels already roll faster with their decreased angle of attack and enhanced momentum. The Vulpine 29" brings the Wagon Wheel to an entirely new level of speed, while the side knobs provide grip in corners.

	SIZE	GMS	LEVEL	WEIGHT	DETAILS
	2.1	50/52	RACE	650g	ARAMID BEAD DNA RUBBER LIGHTWEIGHT CASING

PROWLER SL 29er ♦♦

NEW

USAGE: 29" Cross Country
 CONDITIONS: Moist to Dry / Hardpack to Loose
 The Prowler SL 29" utilizes the distinctive siping, aggressive transitions and side knobs of the 26-inch Prowler family of tires. Yet this 29-inch specific design features shifted center tread and more open spacing. The resulting tread pattern rolls quickly and tracks with precision, especially in drier, loose conditions.

	SIZE	GMS	LEVEL	WEIGHT	DETAILS
	2.1	52/52	RACE	726g	ARAMID BEAD DNA RUBBER LIGHTWEIGHT CASING

WEIRWOLF LT 29er ♦

USAGE: 29" All Mountain
 CONDITIONS: Dry to Moist / Hardpack
 WeirWolf LT 29" is the biggest tire in the 29-inch world. It features a wide and supportive 58-millimeter casing, fast-charging center tread and rows of teeth-like side knobs. It's so big you need to measure your rig before riding it, and it's so plush you'll never opt for another 29er tire.

FIRST, A WORD ABOUT ANATOMY...

Bike saddles are very personal objects. Ask several cyclists of their favorite models and you will receive very different responses—even if the riders are similar in size and skill level. In the next few pages you'll find a range of saddles designed for varying physiques, riding styles and shape preferences.

With over 30 thoroughly-researched, rider-tested models, WTB offers the ideal perch for everyone from world champion racers to their grandmothers.

No matter what your age, gender or ability level, we're guessing that you're not a fan of numbness or pain in your nether-regions. Because we care about your comfort, you'll find several key anatomically-friendly features

that span the entire WTB saddle line. These proprietary designs place more support on your ischial bones ("sit bones") and less weight on sensitive soft tissue. As a rule, WTB saddles are flatter in profile than others. Our profile supports your sit bones and relieves pressure from sensitive areas, whereas rounder saddles pull the pelvic girdle apart, placing pressure where you don't want it.

LOVE CHANNEL

Found on all WTB saddles, the Love Channel has one very important task: protecting your body from unwanted pressure. The central depression provides soft-tissue relief without sacrificing the structural integrity of the saddle.

COMFORT ZONE

Featured exclusively on high-end WTB saddles, these small windows are cut-away from the base of the saddle to provide additional relief from pressure on sensitive areas. Comfort Zone is a subtle difference that provides impressive long-term comfort.

DNA PADDING

Found on all of our high-end models, this dense padding dramatically reduces the weight of the saddle. DNA padding also features superior memory properties, which conforms to your individual anatomy.

SOFT-SHELL

WTB's shock-absorbing, dual-compound saddle base. Soft-Shell saddles minimize trail vibration while simultaneously providing a rigid platform for efficient pedaling.

FLEX-TUNED SHELL

The Flex-Tuned shell boasts an exceptional mix of comfortable flex and firm efficiency. Not as supple as the Soft-Shell and not as stiff as the Carbon Composite, Flex-Tuned saddles provide the happy medium that is ideal for most enthusiasts.

NYLON / CARBON COMPOSITE SHELL

The WTB Composite shell consists of nylon or carbon fiber composite. It provides a firm and supportive feel for unparalleled performance and efficiency. This base is found only on our top-level Devo & Deva.

ABR CORNERS

These durable patches of material protect the corners and sides of the saddle from rips and tears.

TITANIUM RAILS

Titanium rails offer an unprecedented strength-to-weight ratio as well as superior vibration damping characteristics.

NICRO TUBULAR RAILS

NiCro is a hollow alloy rail material that is as light as titanium, but available at a more economical cost. NiCro tubular rails have a distinctive golden-silver tint and offer impressive ride quality.

ROCKET V ◆

USAGE: Road and Mountain
 SIZE: Narrow x Mid-length (127mm x 258mm)
 The Rocket V is WTB's most popular high-performance saddle both on the road and in the dirt. The uniquely contoured pad shape helps increase power output by properly angling the sit bones. This is the saddle of choice for top-ranked UCI downhiller Steve Peat of the Santa Cruz Syndicate.

LASER V ◆

USAGE: Multi-use
 SIZE: Mid-width x Mid-length (142mm x 265mm)
 The Laser V has a smooth shape with no sharp edges, making it a great XC, All Mountain and long-distance road saddle. Unsure which saddle is right for your anatomy? The Laser V's subtle shape makes it the ideal first choice.

JAXON V ●

USAGE: Dirt Jump and Freeride
 SIZE: Wide x Short (160mm x 230mm)
 This short, broad and tough landing platform features a durable cover and grippy side panels for pulling off tricks and surviving missed landings. The Jaxon V is the official saddle of dirt jump superstars Geoff Gulevich, John Cowan, Paul Basagoitia, Jamie Goldman and Jordie Lunn.

POWER V

USAGE: Downhill and Freeride

SIZE: Mid-width x Extra-long (146mm x 307mm)

The Power V is the official saddle of the Whistler Mountain Bike Park. Its long platform lends itself to easy steering and downhill maneuvering, while its oversized rails and durable cover withstand big-mountain abuse.

PURE V

USAGE: Mountain

SIZE: Mid-width x Long (145mm x 277mm)

The Pure V features a distinctive drop nose design, wide whale-tail pedaling platform and an ergonomic contoured shape. This saddle also incorporates a flex-tuned shell with Comfort Zone cutouts. It is the saddle choice of freeride legends Wade Simmons and Thomas Vanderham.

SPEED V

USAGE: Recreational Road and Mountain

SIZE: Mid-width x Mid-length (142mm x 265mm)

WTB's best-selling model utilizes our shock-absorbing Soft-Shell elastomer frame and high-set padding to provide maximum comfort. The mid-width, mid-length size fits many riding and body types.

THE WTB DIFFERENCE

Because WTB designs and manufactures both tires and rims, we can focus on a consistent interface between the two. While all mountain bike tires are based around an established bead seat diameter (559-millimeter for 26-inch tires and 622-millimeters for 29er tires) you'll find a wide variance in many brands. Some brands of tires fit rims so tightly that tools are necessary for installation. Some brands fit so loosely that they easily fall right off the rim. WTB rims and tires feature a consistent interface for easy installation and increased safety.

I-BEAM

The I-Beam, found exclusively on LaserDisc series rims, was pioneered by WTB in 1994. This distinctive, centrally located vertical support counters spoke loads and provides torsional rigidity.

UNBENDIUM BULGE

An additional band of aluminum added to the rim's sidewall that counters torsional, radial and lateral flex. This rib, which replaces the braking surface, provides an impressive boost in strength with a negligible difference in weight. This WTB innovation is found exclusively on LaserDisc series rims.

SAFETY SEAL

WTB's proprietary Safety Seal design utilizes deeper grooves for the bead seats as well as two raised lips that lock the tire's beads into place on the rim. Safety Seal—featured on LaserDisc, SpeedDisc and Dual Duty series rims—holds the tire firmly in place and greatly reduces the chance of "burping" the tire off the rim in heavy lateral loading.

SIDEWALL WEAR INDICATOR (not shown)

This feature—found on Dual Duty, FX and DX series rims—is a groove in the braking surface that, when it no longer exists, indicates that the rim needs to be replaced due to sidewall wear from the use of rim brakes.

DOUBLE-BUTTED SPOKES

LaserDisc wheels are built with top-quality WTB-branded spokes. These premium double-butt spokes are much thicker at the J-bend (the weakest point on the average spoke), yet they still weigh less than standard spokes. WTB spokes are 2.5 millimeters at the elbow, where standard double-butt spokes are 2.0 millimeters at this point. These small differences add up to a stronger, stiffer wheelset.

ALLOY/BRASS NIPPLES

LaserDisc XC and LaserDisc Trail wheels utilize alloy spoke nipples to save weight over the traditional brass variety. Although the brass nipples featured on LaserDisc FR and LaserDisc DH wheels are more durable, they are up to 20-grams heavier per wheel.

RIM STRIPS

Proprietary WTB rubber rim strips are 11-millimeters in width and are designed to compliment Safety Seal rims. We recommend using these strips with any WTB rim, as wider rim strips can interfere with the tire's bead seat.

29ER

WTB 29er rims feature a 622-millimeter/700c bead seat diameter, and a minimum bead opening of 21-millimeters. This minimum width is the defining element that separates 29er rims from 700c trekking, hybrid and road racing rims. Narrower rims are not designed for today's wider 29er tires.

LASERDISC XC

12-POINT ENGAGEMENT

Each LaserDisc rear hub features a cold-forged, fully machined aluminum hub shell and alloy freehub. Power transfer is driven through six, double-sided stainless pawls, totaling 12 points of engagement.

SEALED CARTRIDGE BEARINGS

LaserDisc rear hubs roll on four sets of sealed cartridge bearings and front hubs utilize two sets of sealed cartridge bearings. All bearings are stainless steel.

EASILY ADJUSTABLE

Bearing preload is easily adjustable on LaserDisc Lite hubs through the adjustment nut and locknut.

CLAMP-ON TECHNOLOGY

Another WTB innovation, Clamp-On grips bolt securely to the handlebar via two nylon clamps. Unlike the average lock-on type grip that uses a thick, plastic base, Clamp-On technology utilizes a minimal nylon skeleton. Because there is no layer of dense plastic between your hands and your handlebar, Clamp-On technology is slimmer in profile, more comfortable and lighter weight than lock-ons.

S&N FASTENING

Our Clamp-On grips fasten to the handlebar with bolts and sleeves comprised of corrosion-resistant plated steel. The system works much like a Spoke and Nipple. The chance of stripping the hardware is greatly reduced with this steel hardware and, because the components are so small, this fastening system weighs almost nothing. The nylon clamps are safe to use with carbon fiber handlebars too.

DUAL COMPOUND RUBBER

The Dual Compound Trail grip and the WeirWolf Trail grip both benefit from dual compound rubber. The outside layer of the grip is an easy-on-the-hands soft rubber, while the firm Kraton base material resists twisting and slipping.

Bicycles are emerging as the simple solutions in a problematic world of increasing gas prices, traffic congestions and environmental degradation. The Bikes Belong Coalition reports that in the United States more than 40-percent of all automobile trips are less than two miles. Riding a bike in lieu of driving a car over such distances is economical, healthy and environmentally friendly. Unfortunately, 100 years of car culture have created a complex network of high-speed freeways and busy boulevards, leaving some areas completely unsafe for cycling.

Since the mid-eighties, WTB has actively contributed to bicycle access and advocacy. Now more than ever, WTB and its sister nonprofit organization, Transportation Alternatives for Marin (TAM), are pouring serious time and energy into the development of cyclists' rights. Through education, diplomacy and a clear focus on a solution, we have raised cycling safety awareness at the local, state and federal levels. The results are very real and tangible: In 2005, WTB/TAM and the Marin County Bicycle

Coalition initiated a federal transportation bill that included \$712 million in programs promoting safe and efficient travel for cyclists and pedestrians. Numbers of that size may be difficult to fathom, but the effects on bike routes nationwide are easy to appreciate. This investment in bicycle infrastructure has already delivered a marked improvement in terms of mobility and congestion.

WTB/TAM also engages in a multitude of local Bay Area projects that play a vital role in the big picture of bicycle advocacy. The Cal Park Hill Tunnel, merely one example of many, will link a busy ferry terminal with a densely populated San Rafael neighborhood. The \$25 million tunnel,

Since the mid-eighties, WTB has actively contributed to bicycle access and advocacy. The results are very real and tangible...\$712 million in programs promoting safe and efficient travel for cyclists and pedestrians.

scheduled to open in 2010, will protect cyclists and pedestrians from a complex freeway interchange and encourage cycling by tunneling through—rather than up and over—a steep grade. We are proud of these accomplishments and continue to work hand-in-hand with our esteemed advocacy partners

to keep this momentum rolling. We encourage you to support local and national advocacy organizations as well. These nonprofit groups' tireless work will benefit all of us—commuters, road riders and mountain bikers—for generations to come.

An old proverb instructs that: "We will be known by the tracks we leave behind." WTB aims to leave a lasting legacy of cycling access and infrastructure as well as an enhanced sense of community. We encourage you to join us on this journey.
