

cannondale
1983

Ladies and Gentlemen:

Cannondale will be 13 years old this summer. We have always tried to produce innovative, quality products at reasonable prices, backed by good customer service. In that tradition, we are pleased to bring you our 1983 line of fine outdoor equipment.

This is an exciting year for us. We're introducing many new products, including a cycle touring shoe, several new cycling shirts, a wind suit, a new water bottle, a braze-on mount for the existing water bottle, and a wool seat cover. In addition, our long-awaited new sport-touring bicycle should be in your authorized dealer's showroom by early April. Look for it, — we believe you'll be impressed.

We want to take this opportunity to thank you for your patronage in the past and assure you of our dedication to providing you with quality outdoor products in the future.

Sincerely,

Joseph S. Montgomery
President

Corporate Headquarters:
Cannondale Corporation
9 Brookside Place
Georgetown, CT 06829-8899

How We Got Our Name

We never really gave much thought to what we should be called. It all goes back to a day in the late summer of 1970, when our design studio and workshop were still over the pickle store at Cannon RR Crossing.

Mrs. Forrester had just stewed up a "smelly" batch of pickle relish. We had all the windows open and Jäger was barking at the 9:27 from Wilton. We had been in the place two and a half weeks, working day and night and still hadn't gotten around to having a telephone put in. So Pete Meyers was dispatched to the pay phone across the street to order one.

He relayed the particulars and was about to hang up when the operator asked how he wanted it listed. Peter paused, looked out over the town green to the rusty cannon with the inscription "dale", then back across the street to the old train station.

"Why...Ah, Cannondale Corporation," he replied.

Our Guarantee:

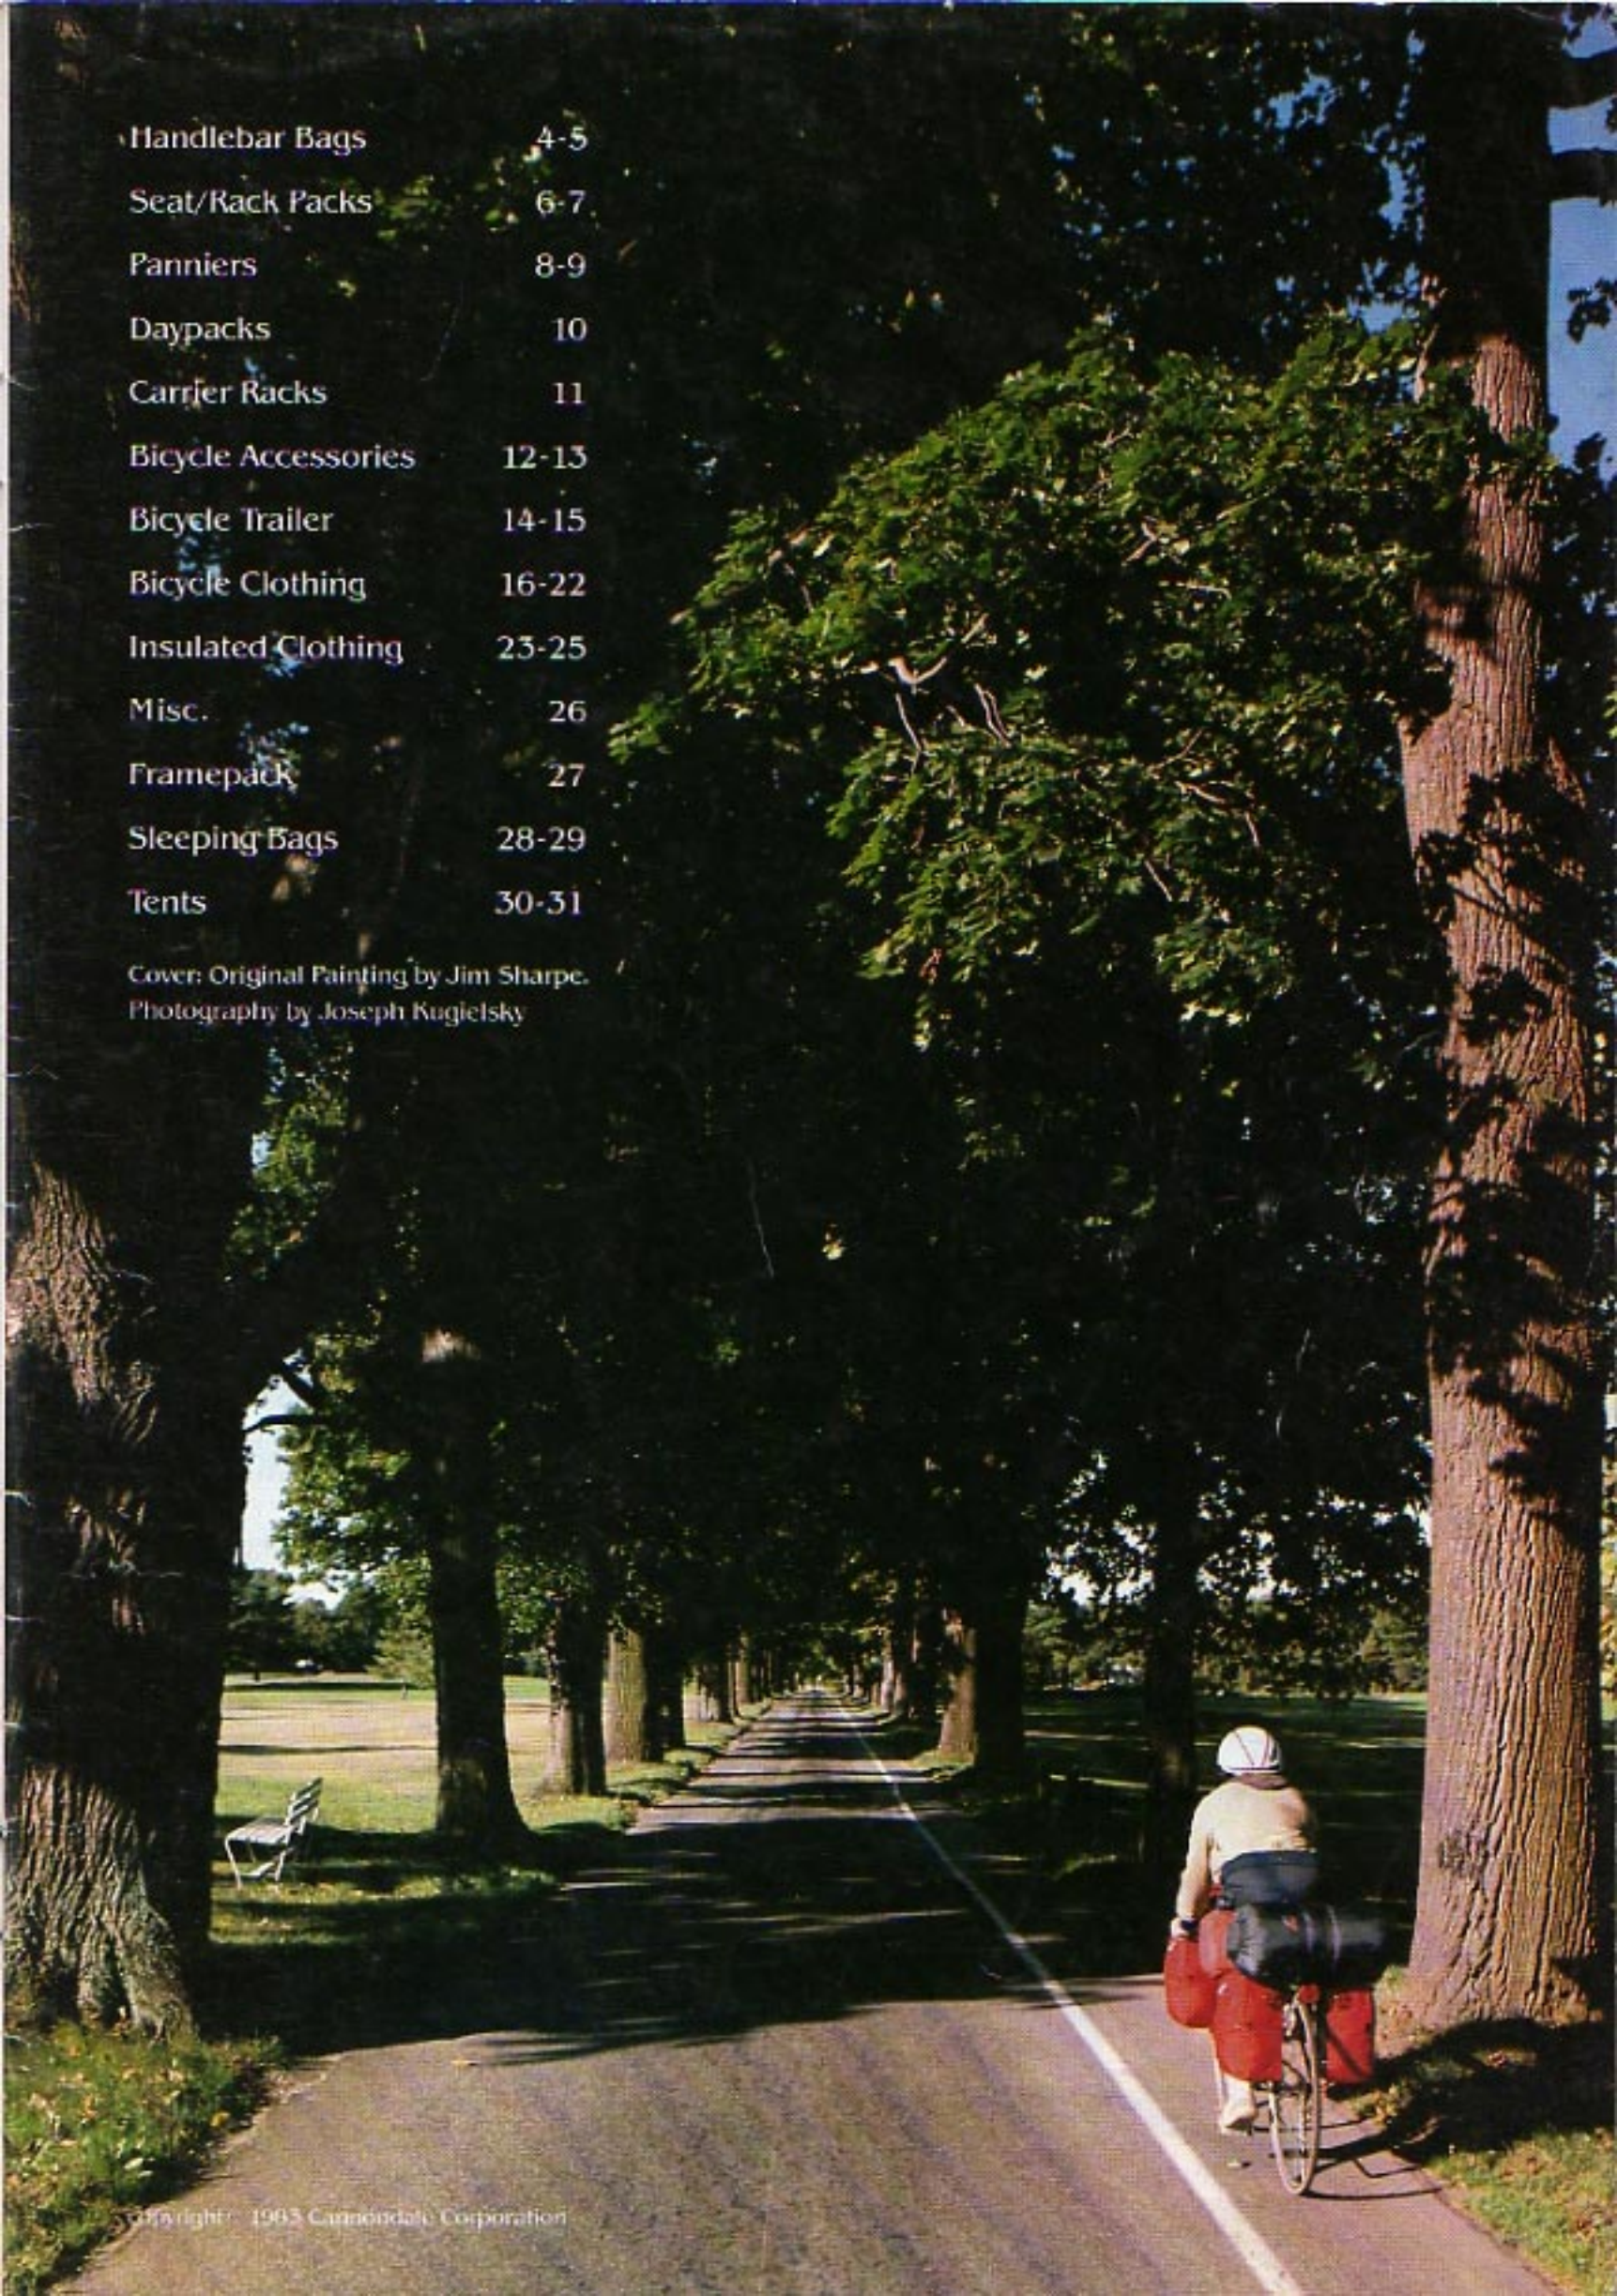

Our products are designed and tested to insure maximum performance. We are proud of our efforts and guarantee our equipment to be free of defects in materials and workmanship during the normal useful life of the product.

Should something escape our rigid quality controls, we will repair or replace the product at our option with no charge. We will also be happy to perform all other repairs (those that are not our fault or occur from normal usage) as inexpensively as possible. In either case, send the product along with a note detailing the problem to your authorized dealer or to our factory: Cannondale Corporation, Friendship Road, RD#6, Bedford, PA 15522

If you need assistance, please call our Customer Service Department at (203) 838-4488. They will be happy to help you.

CANNONDALE BICYCLING EQUIPMENT

Cannondale touring equipment has earned a reputation for excellence. We've been manufacturing bicycling accessories since 1970. We know how it should be done. Our commitment to quality craftsmanship and functional design assures you that the Cannondale product you buy will give you mile after mile of dependable use.

MATERIALS AND WORKMANSHIP. The materials used for any bicycle pack must have a high strength to weight ratio. That's why we use either nylon Cordura® or nylon pack cloth in our bags. Both fabrics are urethane coated for waterproofing, have a tremendous tear strength, defy abrasion, and are rot- and mildew-resistant. We use only YKK nylon coil zippers because we believe they are the finest available. All seams feature 8 stitches per inch (fewer stitches are not strong enough, more weaken the pack fabric) and all stress areas are reinforced with double stitching and bartacks. Our factory people are professionals who take pride in their craftsmanship. Compare the stitching accuracy of a Cannondale product to that of any other. You'll see the difference.

Handlebar Bags

BO37 TRESTLE

Cannondale handlebar bags are functional, versatile and attractive. They mount on your bicycle with a coated cantilevered steel frame and adjustable shock cords that stabilize them against road shock. This system also holds the bag firmly on the bike, but allows easy and complete removal. All mounting hardware is included. The main compartment of each bag is accessible to the cyclist while riding, so its contents are always handy. We make four models to meet the needs of any cyclist from the commuter to the long-distance tourist.

- Nylon Cordura®
- Wrap around zippered main compartment with double pulls
- Leather frame channels
- Warning reflector
- Adjustable shoulder strap
- Snap-on zippered map case
- Two Cordura® side pockets
- External top, front, and back pockets
- Two interior pockets
- Interior elastic compartments

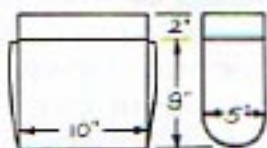

Capacity: 675 cu. in.
Weight: 1lb. 10 oz.
Colors: Red, Blue,
Silver and Ebony
Wt. limit: 8 lbs.
Price: \$49.50

THE POLYFOAM LINER. Every Cannondale handlebar bag, seat and rackpack features our famous polyfoam liner. The liner increases product life by preventing wear from the inside out and distributes the load evenly. In addition, it cushions the contents of the pack, while providing internal support for the bag's shape. The polyfoam liner was designed and developed for bicycling bags by Cannondale. Other standard features include warning reflectors on every bicycle bag, generous rain flaps over zippers, and pull cords on zipper tabs.

LOADING. We've included recommended load limits for our bicycle bags. If you stick to these limits you'll get a substantially improved product life as well as a more enjoyable ride. Remember, however, that these are upper limits for each bag individually. If you use a combination of bags, you should proportion the load properly on your bicycle. Put between 55 to 70 percent of your total load on the rear wheel, and, consequently, between 45 and 30 percent over the front wheel. Also keep in mind that the lighter your total load, the more you'll enjoy your ride. You can also improve product life by avoiding unnecessary exposure of nylon to direct sunlight. By nature, ultra-violet rays gradually weaken nylon fabrics.

BO27 CHUGGER

- Nylon pack cloth
- Wrap around zippered main compartment with double pulls
- Leather frame channels
- Warning reflector
- Two Cordura® side pockets
- External top zippered pocket
- Optional adjustable shoulder strap
- Optional snap-on zippered map case

Capacity: 525 cu. in.
Weight: 1 lb. 6 oz.
Colors: Red, Blue, Yellow, and Ebony
Wt. limit: 8 lbs.
Price: \$34.50

BO17 CASEY

- Nylon pack cloth
- Wrap around zippered main compartment with double pulls
- Web frame channels
- Warning reflector
- Optional adjustable shoulder strap
- Optional snap-on zippered map case

Capacity: 420 cu. in.
Weight: 1 lb. 4 oz.
Colors: Red, Blue, Yellow, and Ebony
Wt. limit: 8 lbs.
Price: \$19.95

BO20 ROUNDHOUSE

- Nylon pack cloth
- Main compartment with single zipper pull
- Web frame channels
- Warning reflector
- Web handle

Capacity: 230 cu. in.
Weight: 16 oz.
Colors: Red, Blue, Yellow, and Ebony
Wt. limit: 8 lbs.
Price: \$14.95

BO21 - TOOT

- Nylon pack cloth
- Polyfoam liner
- Single zippered main compartment
- Warning reflector
- Cam-lock molded nylon buckle fastener
- Can be used as handlebar bag

Capacity: 215 cu. in.

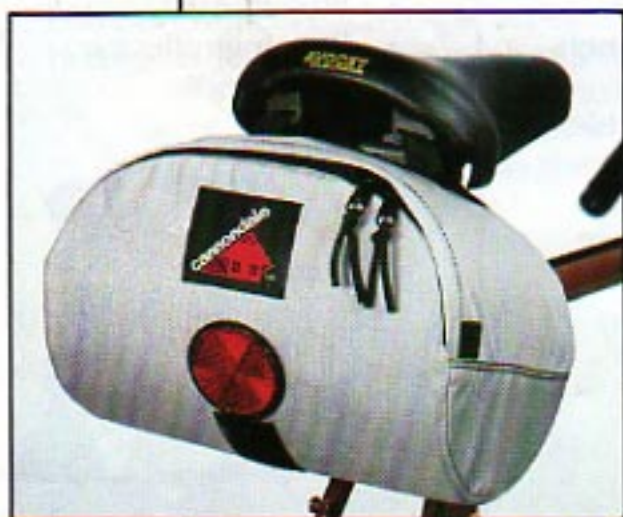

Weight: 6 oz.

Wt limit: 4 lbs.

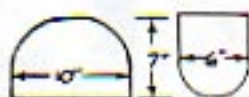

Colors: Red, Yellow, Blue, Ebony

Price: \$9.95

No matter what kind of bicycle you ride or what kind of riding you do, there are certain necessary items you should carry with you. We make several inexpensive bicycle packs ideal for your tools, tubes, tire irons and all those other essentials. Cannondale has a bicycle pack for your needs.

BO31 - SIGNAL

- Nylon Cordura®
- Polyfoam liner
- Single main compartment
- Wrap around, double-pull zipper
- Warning reflector
- Cam-lock molded nylon buckle fastener
- Strap and buckle fasteners swivel to accommodate saddle wires
- Can be used as handlebar bag

Capacity: 300 cu. in.

Weight: 8 oz.

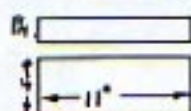

Wt limit: 5 lbs.

Colors: Red, Blue, Silver, Ebony

Price: \$14.95

BO26 - TIRE SOCK

- Nylon Cordura®
- Wrap around zippered main compartment
- Two side flat pockets
- Mounting strap attaches to saddle wires
- Hook and loop strap wraps around top tube and seat tube eliminating sway.

Capacity: 70 cu. in.

Weight: 3 oz.

Wt. limit: 3 lbs.

Colors: Red, Blue, Silver, Ebony

Price: \$9.95

Seat/Rack Packs

BO45 - RACK PACKS - BO46

- Nylon pack cloth (BO45)
- Nylon Cordura® (BO46)
- Polyfoam liner side and bottom
- Single main compartment
- Warning reflector
- Double-pull, wrap around zipper
- Quick mounting/removal
- Attaches to rack with hook and loop fasteners
- Web handle

BO45

Capacity: 400 cu. in.

Weight: 4 oz.

Wt. limit: 8 lbs.

Colors: Red, Blue, Yellow, Ebony

Price: \$14.95

BO46

Capacity: 400 cu. in.

Weight: 6 oz.

Wt. limit: 8 lbs.

Colors: Red, Blue, Silver, Ebony

Price: \$16.95

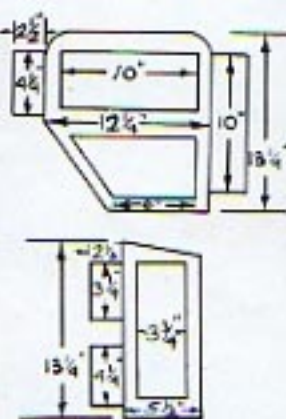

Because they carry the greater share of the load on your bicycle, panniers must be properly designed to perform this special task. Weight must be stabilized and equally distributed, while stress on fabrics must be kept to a minimum. Access to the interior should be easy, and the suspension should be convenient and dependable. In short, pannier construction must reflect thoughtful design and careful craftsmanship. You will find these qualities in Cannondale panniers.

Every pannier we make has our patented (U.S.#4,271,996) three-dimensional support frame to provide even weight distribution and load stabilization. In addition, there is a reduction of stress on seams and zippers that results in longer product life. The frames are made of glass-reinforced nylon resin for greater stiffness and high impact strength. Their design allows side access to the pannier interior, which is important when rain is falling and is a big convenience when you have gear loaded on top of your rack. The frame also forms a platform that helps support the gear on your rack. Another important advantage of our support frame is that the pannier suspension attaches directly to the frame, so it, not the pack fabric, supports the weight.

Our suspension system is simple, dependable, and easy to use. Just hook the steel spring down near the drop-out, lift up, and slip the J-hooks at the top of the pannier over the rail of your rack. Cannondale panniers fit virtually every rack on the market and can be attached together to form a single piece of luggage that can be carried by their web handles or optional shoulder straps. All necessary mounting hardware is included.

Panniers

BO41 – Overlands Rear Panniers

- Nylon Cordura®
- Zippered main compartment with double zipper pulls
- Eight external pockets per set
- Rear warning reflectors
- Web carrying handle

Per set

These rugged daypacks feature our famous polyfoam liner that protects the pack from excessive wear and gives you greater comfort. Each pack is made of rugged waterproof fabric and features rain flaps over every zipper. The main compartment of each pack is accessible through a double-pull YKK nylon coil zipper for convenience and dependability. On the Trackwalker we have incorporated a heavy-duty leather bottom that makes it especially durable for technical mountaineering. The light weight of the Hobo and the Stack make them great as book bags and for cycling, while the Dispatcher is a medium range bag with all-around versatility. You'll find your Cannondale daypack a functional companion whether you take it to the classroom or a mountain top.

Daypacks

BR81 – Rear Carrier Rack

Since its introduction two years ago, our rear carrier rack has earned a reputation for unsurpassed performance because of its great strength and complete adjustability. Its strength comes from proper strut triangulation, non-welded construction, an extruded aluminum alloy deck, and four-point connection to the bicycle. This is the one and only fully adjustable, totally modular rack with four point connection, so it will properly fit nearly any bicycle. What's more, every part is replaceable. Combine these extraordinary features with superior, lightweight materials and a beautiful anodized finish and you have the finest bicycle rack made. The rack comes fully assembled with standard sized screws, and includes a reflector bracket and all mounting hardware (pannier hooks, non-marring seat stay clamps, screws, nuts, and an allen wrench).

Carrier Racks

BR81S Silver anodized rear rack

BR81E Black anodized rear rack

Weight: 17 oz.

Wt. limit: 50 lbs.

Price: **(BR81S)** \$29.50

(BR81E) \$29.50

BR80 – Front Carrier Rack

We have made the Cannondale front carrier rack with the same fine, lightweight materials and with the same attention to detail we use for our rear rack. Proper strut triangulation, non-welded construction, and an extruded aluminum alloy deck help make our front rack durable and dependable. It attaches to the brake bolt with a bracket that will not interfere with the movement of either side- or centerpull brakes. This bracket also allows your fork to flex without putting excessive strain on the rack itself. The rack comes fully assembled with standard sized screws and is totally modular so every part is replaceable. All mounting hardware is included (pannier hooks, screws, nuts, mounting bracket, allen wrench) along with a front reflector bracket. Add to this a beautiful anodized finish and you have a front rack you'll be proud to put on your bicycle.

BR80S Silver anodized front rack

BR80E Black anodized front rack

Weight: 13 oz.

Wt limit: 35lbs.

Price: **(BR80S)** \$26.50

(BR80E) \$26.50

Our patented (U.S.#4,345,704) waterbottle and mount is the most convenient and practical bicycle waterbottle available. We use a unique hook-and-loop fastening system. This eliminates the awkward alignment required to put a waterbottle into a cage, and the even more difficult task of aligning a dovetail. Just place the loop covered bottle on the hook covered base and it is held firmly in place. It's that simple and that quick.

We've given the bottle itself a revolutionary design that makes any other bicycle waterbottle obsolete. It has an exceptionally wide mouth, allowing you to mix powdered drinks or add ice. This wide mouth also makes cleaning the bottle easier because it allows access to the inside. Holding 24 ounces, it has at least 25% more volume than conventional waterbottles. The bottle is made of FDA-approved polyethylene, and also features a drinking spout that is easily opened and closed with your mouth.

The base is made of an incredibly tough and weather resistant material that will not mar the finish on your bike. It installs easily on your bicycle's downtube with a single screw. (The waterbottle should be mounted only on the downtube.) A spacer is included for bicycles with smaller downtubes.

This year we also have a clean custom looking mount that will fit on downtube braze-on bosses.

BH20 – Waterbottle and Mount

Weight: 3 oz.

Price: \$9.95

BH20B – Waterbottle and Braze-on Mount

Weight: 3 oz.

Price: \$10.95

BH30 – Waterbottle

Due to popular demand, we have now produced a conventional bicycling waterbottle with the same wide mouth and lid as our cageless (Hook-and-loop mounting) waterbottle. It has a large capacity of 20 fl. oz. and will fit any normal sized cage. This practical bottle is made of translucent, FDA-approved polyethylene and has a distinctive Cannondale logo printed on the side.

Price: \$1.50

Bicycle

H-100 – Cycling Hats

This is no flimsy "give-away" cycling hat. It is made of durable 80/20 cloth and features a stiffened bill, and elastic back band. A handsome red, white, and blue ribbon runs down the middle, and there is an embroidered Cannondale logo on each side. One size fits all.

Colors: Red, White, or Blue

Price: \$5.98

BG70 – Cycling Gloves

Bicycle tourists, racers, and recreational riders are discovering that Cannondale makes the world's finest cycling gloves. They are handmade by our craftsmen in Pennsylvania out of top-quality glove leather. The backs are hand-crocheted of 100% cotton to assure long-lasting comfort and fit. Fewer seams and full padding, which extends over the thumb, protects your hands from the numbness and discomfort that often occurs from prolonged riding. Hook-and-loop fasteners make the non-stretch wrist closures easy to secure. You'll enjoy many miles of comfortable cycling with these attractive gloves.

BG70 – Cycling Gloves

Price: \$29.50

Determine your size by measuring in inches your right hand around the knuckles with hand flat. Do not include thumb.

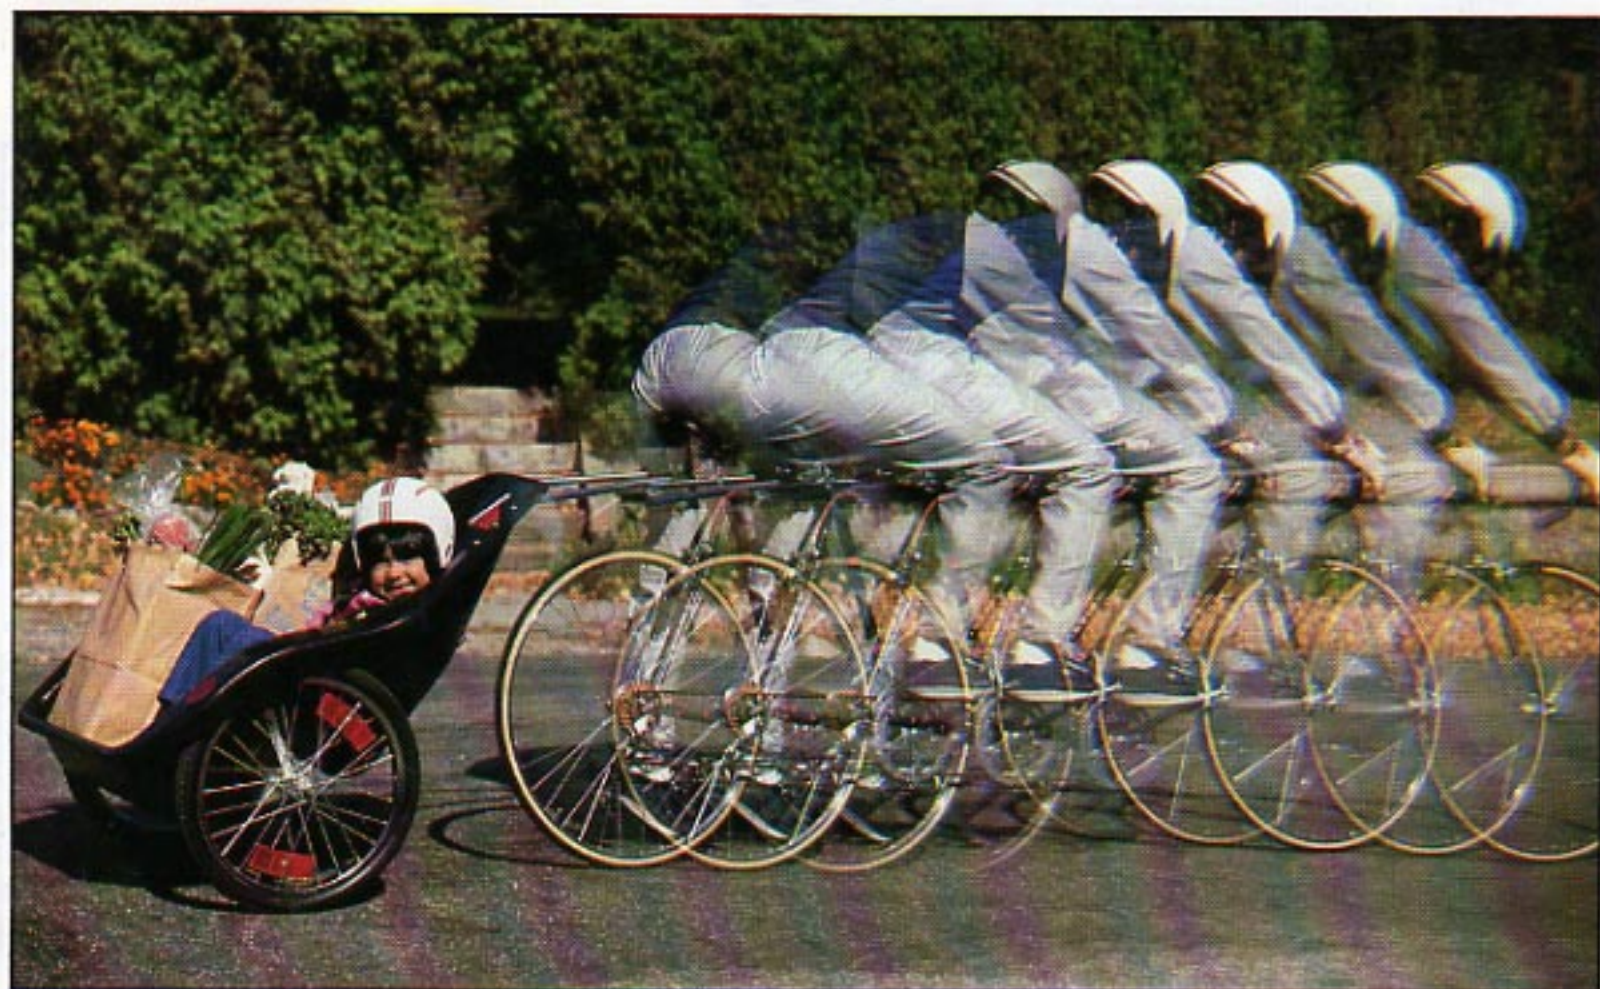

Accessories

BC75 – Seat Cover

Increase the comfort of your bike's saddle with a Cannondale Merino sheepskin seat cover. Wool will give you a cooler ride with less chafing for warm weather riding, and a warmer ride when the temperature drops. We use Merino wool because it is denser and, therefore, more comfortable than other wools. These seat covers attach quickly with an elastic strap that goes under the nose of your saddle, and with a drawstring that ties at the rear. Our bicycle seat covers come in three sizes so you can be sure of a proper fit for your saddle.

Small (for racing & touring saddles) \$10.95
 Medium (for wide spring saddles) \$12.95
 Large (for large exercise saddles) \$14.95

Bicycle Trailer

In 1970 Cannondale introduced the Bugger, the original light-weight bicycle trailer, creating an entirely new dimension in bicycle

use. Since then we have improved upon our initial successful design and have produced the Bugger III. While designed primarily as a child carrier, the Bugger III is also great for bicycle touring, running errands, and day outings. We have incorporated many innovative features to make the Bugger III the finest bicycle trailer available anywhere.

Its unique torsional hitch, low center of gravity, and sturdy 20" wheels with pneumatic tires make the Bugger III extremely stable and smooth riding. You can pull up to 80 pounds in it without significant extra effort (more weight will increase your braking distance.). The vacuum molded polyethylene chassis helps make the Bugger III durable and strong, and its aerodynamic shape reduces wind resistance. Sealed bearing hubs and a steel axle deliver many miles of reliable use.

As a child carrier, the Bugger III is unsurpassed. Its chassis is anatomically designed to comfortably seat one or two children up to 40" tall. They sit facing rearward, which protects them from road debris that may be kicked up by the bicycle and passing cars. The high back supports your children's heads during the ride, while built-in guards protect them from the turning wheels. The waist and shoulder harness features child resistant buckles and keeps your children from climbing around while you are moving.

The Bugger III will fit most any bike with a 20" frame size or larger. Its polypropylene and stainless steel hitch allows you to attach the Bugger III to your bicycle quickly and without tools. The steel toggle latch (resembling a ski boot buckle) locks the hitch securely to your seat post. There is no need for any permanent attachments on your bike. When the Bugger III is on your bicycle, it is securely on, and when it is off your bike, it is completely off.

By increasing the versatility of your bicycle, the Bugger III will broaden your cycling horizons. The bicycle is the most energy efficient form of travel known. Now you can capitalize on your bicycle's efficiency with a Bugger III of your own.

B003 - Bugger III

Weight: 25 lbs.

Wt. limit: 80 lbs.

Price: \$199.50

B003 – Bugger III

A018 – Tonneau Cover

This waterproof Tonneau Cover will increase the usefulness of your Bugger III by protecting your cargo from the elements. It can also be used to help keep cargo securely in the trailer. The cover is made of urethane-coated nylon pack cloth and fastens snugly over the Bugger III. A strip of elastic holds it in place, and four adjustable buckles secure it. Two Reflexite® light-reflectors are stitched on for added visibility. The Tonneau Cover is sold separately.

Colors: Red, Yellow, Blue

Price: \$19.95

A010 – Hitch

This unique hitch is included as standard equipment with the Bugger III, but may also be purchased separately for any previous Bugger model. It attaches quickly to your bicycle's seat post without the need for any tools. In addition to providing remarkably easy attachment, the torsional hitch is an important component for stabilizing the bicycle trailer. It dampens road shock, keeps the trailer firmly on the road when cornering, and forces a wheel that hits a bump back to the road. The hitch is made of molded polypropylene and stainless steel for long-lasting, reliable use.

Price: \$18.95

CYCLE SHIRTS

When bicycling your body assumes an unusual position. A shirt that fits fine normally may not fit well at all when you're cycling. We have given our cycle shirts an extra long cut so they provide adequate coverage even while you're bent low over your handlebars. The shoulders and sleeves allow your arms the freedom of movement you need for cycling. Each shirt is made of breathable 100% cotton and is completely machine washable. All our shirts are available in men's and women's sizing, and the cycle T-shirt (BTT) offers two styles. The women's cycle T-shirt has a flattering French cut, while the men's has a traditional T-shirt cut. The combination of functional design and attractive looks make Cannondale cycle shirts great whether you are on or off your bike.

Because the main point of contact between a cyclist and the bicycle is at the seat, a good pair of cycling shorts is a must. Our cycling shorts have a high elastic back that keeps them from pulling down and shifting while you ride. There is no crossing seam in the crotch and we have added a full fleece lining. Fleece is absorbant, soft, non-chafing, durable, and machine washable. The legs are long enough to protect against saddle rub, but their full cut provides unrestricted leg movement. The shorts also feature large size cargo pockets with snap closure, a zippered fly, and snapping waist. Cargo pockets on the men's shorts are gusseted for extra room, while the women's shorts have flat pockets for trim styling. For durability and comfort, we make these shorts of Lycra Twill, a blend of polyester (63%), cotton (34%), and Lycra (3%). Cannondale cycling shorts combine functional design with smart styling to provide you with the bicycling performance you need.

S - Bicycle Touring Shoe

When you are serious about running you get a pair of running shoes; when you are serious about tennis, you get a pair of tennis shoes. The same is true for bicycling. Tennis and running shoes are not designed to meet the special demands a cyclist puts on footwear.

Our new touring shoe offers you pedaling performance with comfort and good-looks. We make this shoe at our factory in Bedford, Pennsylvania, a town with a long tradition of shoe manufacturing. Many of the Cannondale staff have years of experience making footwear, and it shows in this fine touring shoe.

We've styled it like a classic running shoe, but close inspection reveals the added details that make this shoe exceptional for cycling. The upper is breathable nylon to keep your foot well ventilated. Suede reinforcements protect the shoe at critical wear points, especially beneath the toe clip and strap. Parallel ridges in the sole are correctly angled for sure pedal grip. The sole also features minimal heel flair for crank clearance but is wide enough for stable walking.

The sole is specially designed and constructed to provide you with an optimum balance of cycling performance and walking comfort. It is stiff enough to protect your foot from pedal stress and will transfer more of your energy to the bike for efficient pedaling. Yet, there is enough flex in the toe to allow the shoe to move with your foot for walking. In addition, the padded collar and tongue, heel counter, and arch support provide all-day comfort whether you are walking or riding.

To assure you of a proper fit we use careful American sizing and the shoe is available in men's and women's sizes.

Colors: Blue, or Silver-Gray

940 – Long Sleeved Rugby-styled Shirt

In this handsome rugby-style shirt you can tackle any outdoor activity in comfort. It is made of durable, heavy 100% cotton and has a sleek, tailored look. The long cut makes it great for cycling, yet you'll find this a rugged, good-looking shirt for all active outdoor wear. It comes in male and female sizing, and is machine washable.

Colors: Red, Yellow, Green, Blue

Sizes: Male – S, M, L, X

Female – S, M, L

Price: \$39.50

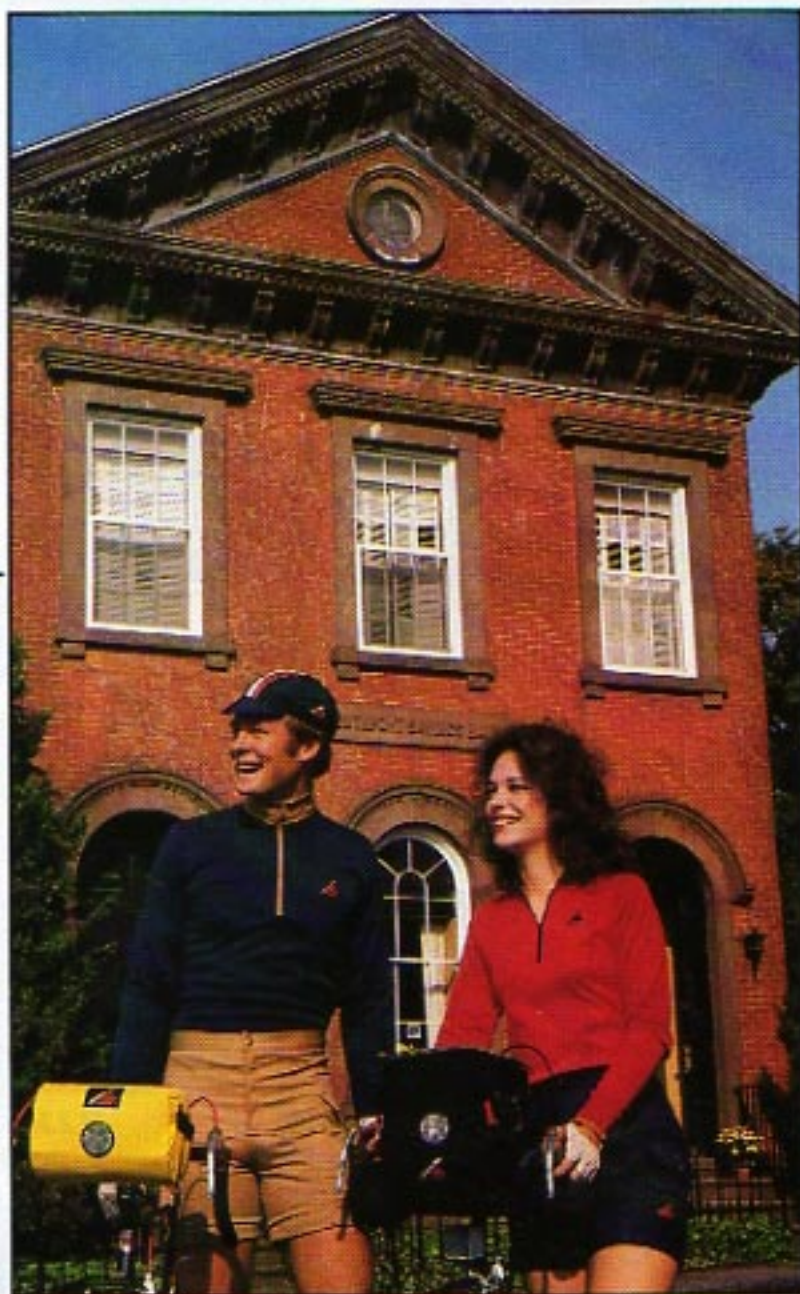

Our new Long Sleeve Cycling Shirt is made of a warm and breathable blend of polyester (70%) and cotton (30%). This tightly woven fabric is resistant to wind, durable, dries quickly, and has a soft, comfortable feel. The shirt is cut long for the cyclist and has a partial front zipper for ventilation control. This is a great training shirt that is completely machine washable. It comes in both male and female sizing and will give you many miles of true cycling comfort and performance.

Colors: Red, Yellow, Green, Blue

Female – S, M, L

Price: \$34.50

941 – Long Sleeved Zippered Cycle Shirt

920/921 - Wind Suit

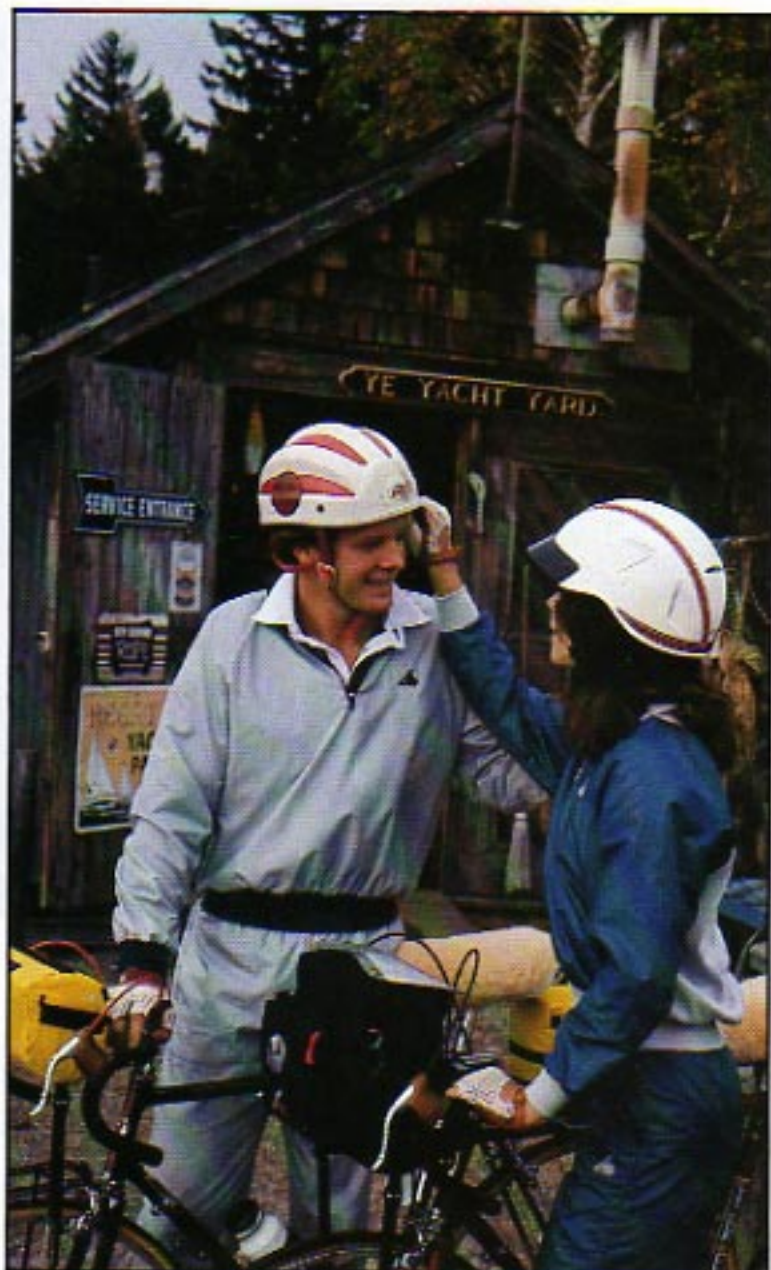

This wind suit is for the cyclist looking for added warmth on those rides when there is a chill in the air.

To deliver the proper cycling performance we use two different fabrics in our wind jacket. The tightly woven Antron® nylon front and sleeves protect you from wind while you ride downhill, but when you come to the next uphill your hard earned perspiration passes through the breathable back panel. This panel is made of a ribbed-knit blend of 50% cotton and 50% polyester that provides a stylish contrasting color and enough stretch so the jacket won't ride up while you are bent low on the handlebars. The cuffs, collar, and waistband are also made of this blend for extra comfort and weather protection, while a partial zipper in front allows ventilation control.

The wind pants are made entirely of Antron® nylon and have an elastic waistband and front twin pockets. A zippered gusset on each ankle keeps them tight around your legs when you're cycling to provide crank and chain clearance. When unzipped the pants will slip easily over your shoes.

Separately the jacket and pants each fold to the size of a fist, and together weigh only about 10 oz. This is lightweight comfort that can be taken anywhere, making the wind suit an ideal warm-up for cycling, running, tennis, and almost any other outdoor activity.

The new Cannondale wind jacket and pants are sold separately and come in men's and women's sizing.

916 - Tahawus Shell Pullover

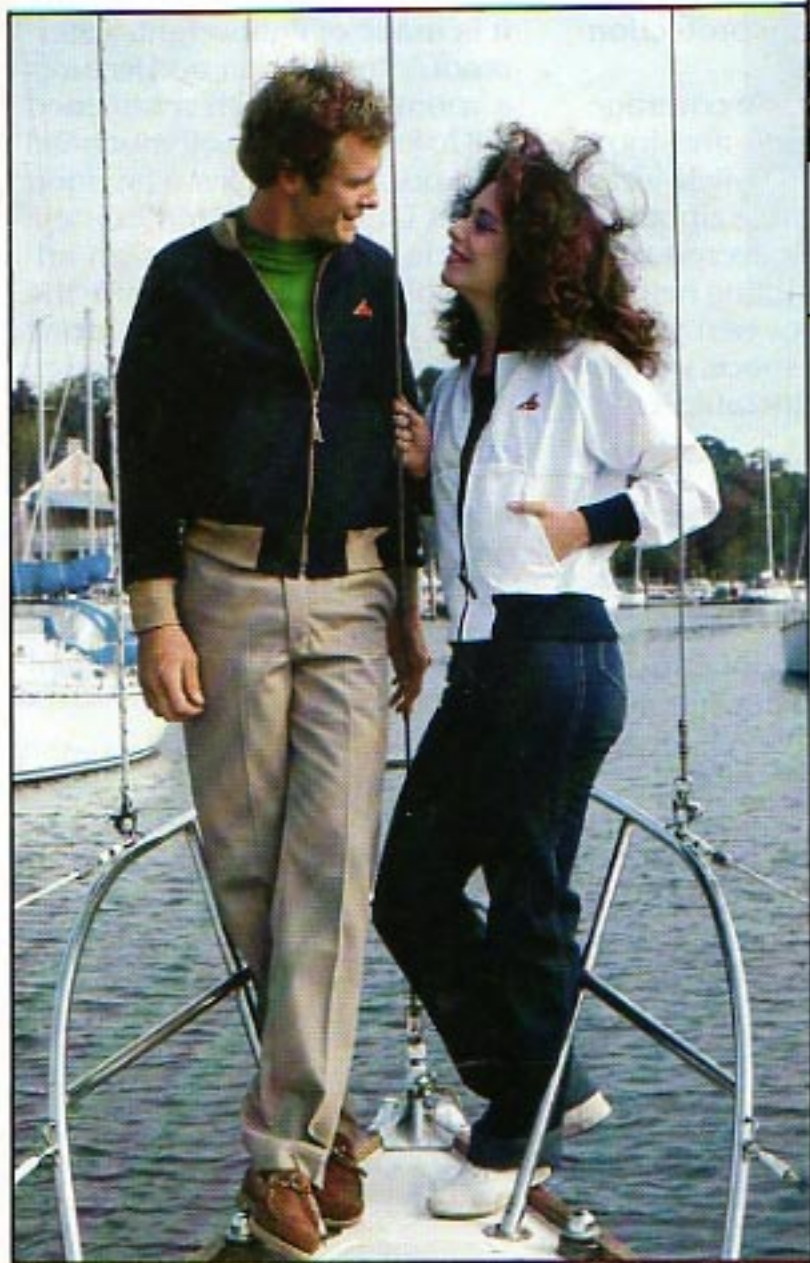

Tahawus is an Indian word meaning "cloud-splitter." Riding through a damp morning fog in this attractive pullover, you'll realize just how aptly we've named it. Made of durable and weather-resistant 80/20 cloth, the Tahawus really keeps the elements at bay. The ribbed-knit cuffs, collar, and waistband add extra weather protection and its partial front zipper allows you to choose the amount of ventilation. The zippered kangaroo pocket provides plenty of cargo space for maps, a compass, snacks, or a fieldguide, and fronts a tunnel-style hand-warmer pocket. Raglan sleeves allow full freedom of movement and room enough for a sweater beneath.

Colors: Blue, Camel, Red, White

Sizes: Male - P, S, M, L, X

Female - P, S, M, L

Price: \$39.50

913 - Champlain Shell Jacket

The Champlain is a versatile shell jacket that is both attractive and durable. It has many of the same features as its counterpart, the Tahawus, such as 80/20 cloth construction, raglan sleeves, and ribbed-knit cuffs, collar and waistband. The full-length zippered front and large side pockets make the Champlain a smart garment, whether you are climbing a mountain or out for a casual night on the town.

Colors: Blue, Camel, Red, White

Sizes: Male - P, S, M, L, X

Female - P, S, M, L

Price: \$45.00

C918/C919 – Rain Suit

C917 – Rain Poncho

If you spend much time out of doors, whether cycling, hiking, or attending ballgames, you've undoubtedly encountered rain. That's why we've made this versatile rain suit. Loaded with features to keep a cyclist dry during a storm, it's also ideal as rain protection for nearly any other outdoor activity as well.

The jacket has an extra long back to provide adequate coverage even while you are bent over your handlebars. A hook-and-loop fastener allows you to tuck this flap up for more stylish wear off your bike. Air circulation is achieved through a double zippered vent beneath each arm, and a specially cut, mesh covered vent across the back. The hood is roomy enough to fit a cycling helmet and features an adjustment strap to take up slack when you're not wearing your helmet. Two pockets provide cargo space, while a full-length YKK nylon coil zipper in front and adjustable cuffs make the jacket easy to put on or take off.

The pants feature an elastic waistband, and zippered access to clothing pockets. Each leg ends with a zippered gusset that keeps the pants tight around your ankle when riding, but, when unzipped, allows freedom of movement for walking, and makes it easy to put on over shoes.

Both the pants and jacket are made of soft, waterproof Antron® nylon for comfort, durability, and rain protection. They are sold separately.

C918 – Rain Jacket

Color: Yellow

Sizes: (unisex) P, S, M, L, X

Price: \$49.50

C919 – Rain Pants

Color: Yellow

Sizes: (unisex) P, S, M, L, X

Price: \$29.50

Our poncho offers comfortable, convenient rain protection for almost any outdoor activity. It is made of lightweight, waterproof Antron® nylon, and features a roomy hood with a stiffened bill to keep the rain off your head and out of your eyes. The hood is cut large to accommodate a bicycle helmet, but has an adjustable strap to take up the slack during times you don't wear a helmet. Thumb and leg straps are included to help keep the poncho taut while you are cycling. You can take this poncho almost anywhere, so you can be prepared for wet weather instead of surprised by it. And the poncho is a bright yellow to give the added visibility you need when the air is dark with rain.

C917 – Rain Poncho

Color: Yellow

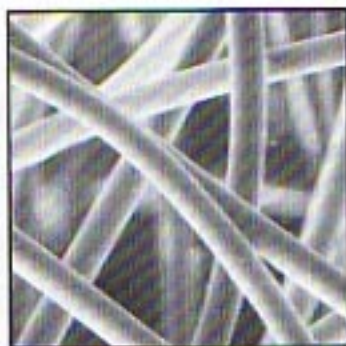

Sizes: (unisex) M, L

Price: \$39.50

Insulated Clothing

Sontique*

All the new thin-fill insulations are designed to provide warmth without bulk, to be slim, fashionable, and yet functional. They may be all you need when engaged in active sports. Dupont's Sontique* of 100% Dacron® 66 polyester is the best engineered of these insulators.

Sontique* gets its high insulation value by a thin layer of air bound by friction around every fiber surface. Since air is bound to every fiber surface, an increase in insulation can be achieved by making the fibers finer, thus increasing the number of fibers and their total surface area.

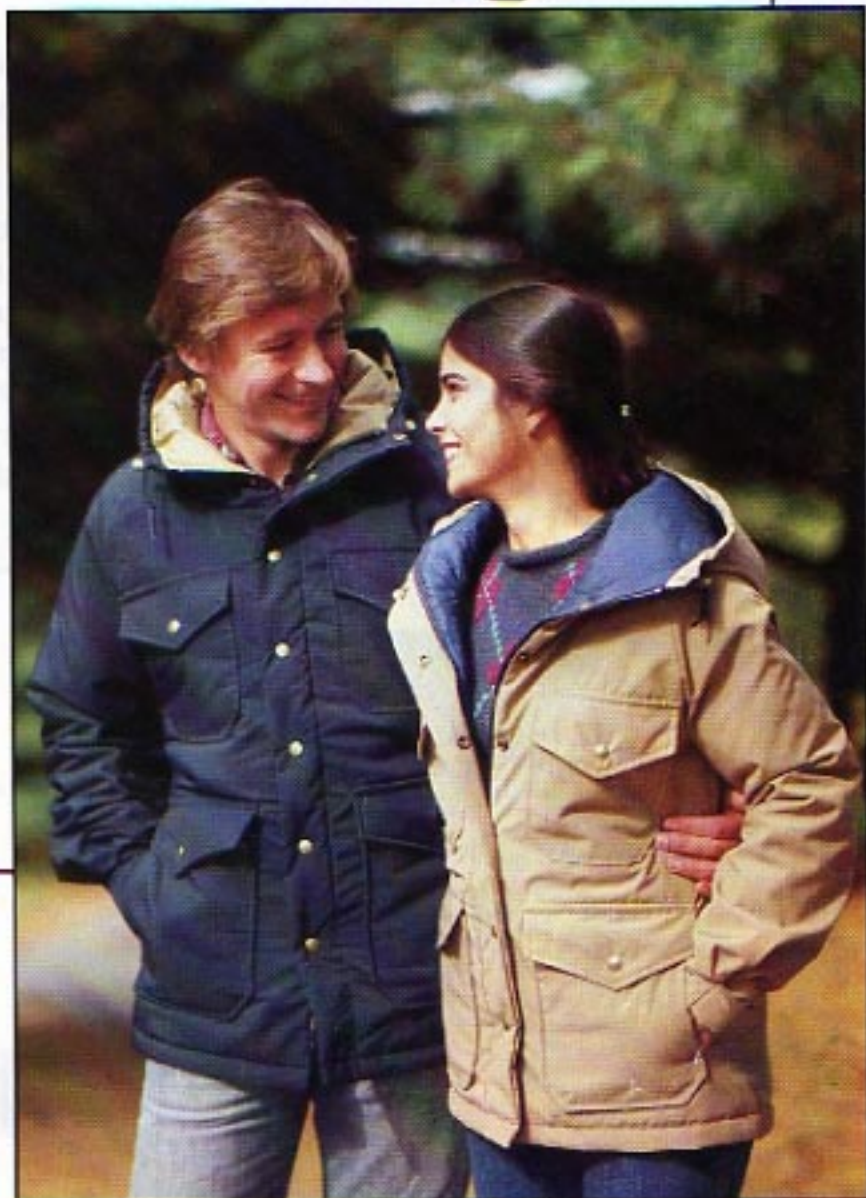

Sontique* drapes beautifully and can be washed or dry cleaned. No other thin fill keeps you warmer.

SONTIQUE
Dupont of Dacron® 66 polyester
STYLING INSULATION

INSULATED CLOTHING SIZING CHART

	MALE	FEMALE
P	30-32	4-6
S	34-36	8-10
M	38-40	12-14
L	42-44	16-18
X	46-48	

Many Cannondale garments are made of 80/20 cloth, a unique blend of polyester and cotton that is remarkably durable and weather resistant. Each fiber of 80/20 cloth is pre-blended to contain 80% polyester and 20% cotton, while most other blends use a cross-weave, where the fibers in one direction are cotton and those in the other direction are polyester. The integral mix of 80/20 cloth results in a tighter weave that resists wear, wind, and water better than those other blends. For outdoor garments there is no better material than 80/20 cloth:

912 - Mountain Parka

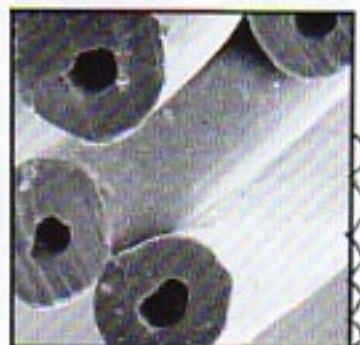

- Insulation: Sontique*
- Outer Shell: 80/20 cloth
- Fully lined with Antron® Nylon
- Four snapped cargo pockets
- Two insulated handwarmer pockets
- Draft flap with snaps
- Two-way separating YKK coil zipper
- Elasticized waist
- Permanent hood

Colors: Blue, Camel, Green

Price: \$99.50

Dacron® Hollofil® II is more economical than down. Garments filled with Dacron® Hollofil® II are easy to care for. Should they puncture or tear, battings of Dacron® Hollofil® II will not leak as down will. Battings of Dacron® Hollofil® II retain loft even when damp or wet, unlike down which loses essentially all insulating value.

Insulation uses dead air space to minimize loss of heat from the body and prevent cold air from coming in. The thicker the dead air space, the better the insulation. Dacron® Hollofil® II uses a revolutionary approach to creating more dead air—a hollow core which runs through each fiber. These fibers are larger in diameter than solid polyester fibers of equal weight. Battings prepared from these hollow core fibers have at least 15% more loft per unit weight than battings prepared from conventional solid polyesters, and hence insulate better. It is important to remember that with insulation, loft or thickness is more important than weight. Dacron® Hollofil® II gives you the best warmth to weight ratio in the industry.

C847 - Fannypacks - C848

Because it leaves your hands and shoulders free, a Cannondale fannypack is ideal for toting essentials on day hikes or ski tours. We make our fannypacks out of waterproof, nylon Cordura[®], with a large main compartment that is padded to cushion contents and protect your back from discomfort. Elastic web straps within each pack securely hold fragile items, such as lenses, while the exterior pocket conveniently carries smaller items. Leather appointments reinforce the connection of the pack to the web belt for added strength and wrap-around comfort. The quick-release Fastex[®] buckle makes the pack easy to put on or take off. Cannondale fannypacks are available in two sizes.

Colors: Red, Blue

**C104 - Duffles - C103**

These attractive duffles are ideal luggage, whether for going to the gym or away for a romantic weekend. They are made of waterproof nylon Cordura[®] for long lasting use. The removable pocket is just the right size for a toilet kit. Just unzip it from the main bag and carry it with you to the sink or shower. Zippers are YKK nylon coil for durability and ease of operation. The detachable shoulder strap and all-cotton web handles make carrying the Cannondale duffle easy, and with two sizes to choose from, your biggest travel worry will be where to go.

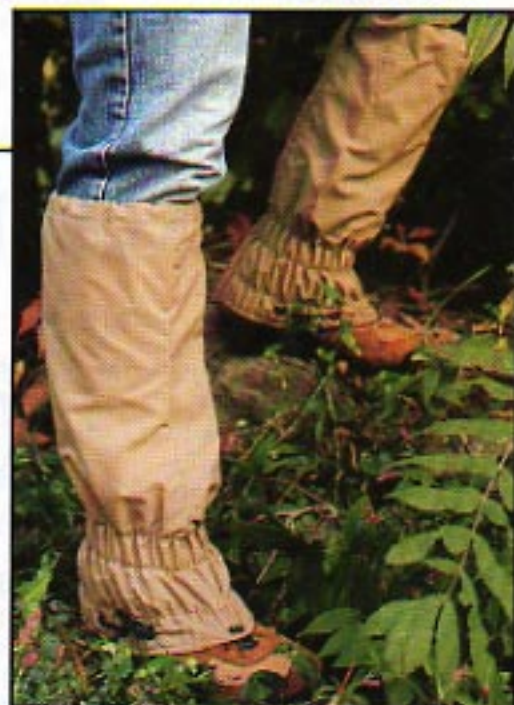

C103 Regular Duffle. 9" dia. x 18" long.

Price: \$29.50

C104 Large Duffle. 11" dia. x 26" long.

Price: \$39.50

Color: Ebony

**C905 - Gaiters (15")**

If you've ever suffered with cold snow or hot dust in your boot, you should know that gaiters are not kin to the crocodile, but are essential gear for any cross-country skier, climber, or hiker. Made of rugged, breathable 80/20 cloth, Cannondale's 15" gaiters feature sewn-in elastic ankle bands and a cord that runs beneath your foot keeping the gaiter snug over your boot. The freeze-resistant nylon coil zipper runs up the back where it has less chance of being clogged with snow or mud. A nylon cord ties off the top of each gaiter to keep it from sagging and to keep out trail debris. Many cold weather cyclists have found these gaiters great protection for winter riding.

Colors: Blue, Camel

Price: \$17.95

Framepack

In the 19th century there was a sophisticated locomotive noted for its ability to climb hills with heavy loads. This steam engine was known as the Winans' Camel – named after its inventor, Ross Winans. We have traditionally called our large backpack the Winans' Camel because its advanced design makes it unequalled for comfortably hauling a full complement of camping gear into the mountains. The Winans' Camel is the result of over 10 years experience making backpacks. It is the finest backpack you can buy.

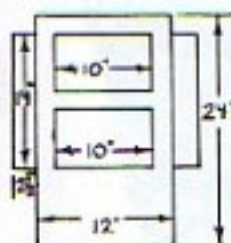

We have combined the best features of internal and external frame packs. You get the strength and load capacities of the external frame with the comfort and stability of an internal frame. The load rides close to your back, near your center of gravity so you can experience more natural hiking. But you can still strap your sleeping bag or other bulky items to the frame, an advantage most internal frame packs lack. The frame is a single tube of $\frac{3}{8}$ " aluminum alloy, formed into a remarkably strong semi-hour-glass shape.

On top of the frame we've put a sturdy, glass-reinforced polypropylene shelf that provides an ideal location for lashing oversized gear, such as a tent. This shelf also supports the large, front-loading pack bag. The pack bag is made of rugged, waterproof nylon Cordura® and features four large external pockets. The main compartment is accessible through a full-length, wrap-around zipper. This front loading design allows access to anything in the pack without disturbing the rest of your gear. We reinforce all stress points with double-stitching, bartacks, and leather to assure long wearing use.

The Winans' Camel has a sophisticated suspension system that will custom fit your body type. It is completely adjustable to fit anyone from 5' to 6' 8" tall. What's more, you can adjust the pack to match the load you are carrying and the terrain over which you are traveling. You won't find a backpack anywhere with a more thoughtful and genuinely functional design.

C882 – Winans' Camel

Other features of this pack include:

- Internal zippered pocket
- Two large front pockets
- Vertical zippered side pockets
- Removable belt pocket
- Two sets of 40" tie downs (top and bottom)
- Six leather tie down patches
- Load compressor straps
- Removable sternum strap
- Adjustable anti-sway strap
- All Fastex® Quick Release buckles
- Lifting handle
- Ice axe loop
- Ski slots with lash tabs
- Six lash points on top of pack

Color: Camel

Weight: 6 lbs. 2 oz.

Capacity: Approx. 4,300 cu. in.

Fits persons 5' to 6' 8"

Fits waist 20" to 45"

Price: \$149.50

Sleeping Bags

To keep you warm a sleeping bag must efficiently retain the heat your body naturally gives off. The amount of heat retained determines how "warm" the sleeping bag is. Loft, construction, and insulation material are essential elements that affect sleeping bag warmth. At Cannondale, we combine quality materials with superior workmanship and design to produce the finest synthetic-filled sleeping bags in the world.

LOFT. The thickness of insulation in a sleeping bag is known as loft. Everything else being equal, the higher the loft, the warmer the sleeping bag. However, don't let loft be your sole reason for buying a particular sleeping bag. Because of intelligent design and construction, a Cannondale sleeping bag will be warmer than other sleeping bags of equal loft.

DESIGN & CONSTRUCTION. Cannondale sleeping bags are modified mummy bags. This means they are tapered to your body, providing the most heat-retaining efficiency. To eliminate cold spots, we have combined differential cut and offset quilting with an innovative triple layer construction. Differential cut means the inner shell is cut smaller than the outer shell to make it harder for you to compress the insulation with your body.* By using offset quilting we can maintain constant loft with no sewn-through seams. Our triple layer "sandwich" construction is achieved by sewing a layer of Dacron® Hollofil® II to the outer shell, and another layer to the inner shell. A third layer of Dacron® Hollofil® II is "sandwiched" between to maintain loft completely around the bag, especially at the crucial seam opposite the zipper, an area often overlooked by other manufacturers. Our sleeping bags also feature a full length draft tube along the zipper, which, on the two colder weather bags, continues beyond, forming a wrap-around draft collar. All our bags have generous hoods with separate drawstring closure, while the Great Northern has an expedition quality, full sculpted hood for total cold weather protection.

Colors: Rust,
Blue, Green

S804/S805 – Blue Ridge Rider

To make this lightweight sleeping bag we use a two-layer construction.

Temp. rating: 25° F.

Stuff sack(S805S): 8 1/4" d. x 12 1/2" l.

Price: S804 (6') – \$99.50
S805 (6' 6") – \$99.50

S806/S807 – Cheasapeake

This warm three season bag is made with our triple layer construction and has a full wrap-around draft collar.

Temp. rating: 5° F.

Stuff sack(S807S): 10 1/4" d. x 16 1/2" l.

Price: S806 (6') – \$125.00
S807 (6' 6") – \$125.00

S808/S809 – Great Northern

For complete winter protection this expedition performance sleeping bag has our triple layer construction, full wrap-around draft collar, and a sculpted hood.

Temp. rating: 20° F.

Stuff sack(S809S): 11" d. x 21" l.

Price: S808 (6') – \$150.00
S809 (6' 6") – \$150.00

INSULATION MATERIAL. Cannondale sleeping bags feature Dacron® Hollofil® II insulation. Dacron® Hollofil® II is superior to other polyester fills because each fiber is hollow. This means that Dacron® Hollofil® II is unsurpassed in loft when compared to an equal weight solid fiber. It also has a larger surface area, so more air is bound to each individual fiber. Surface bound air can be as much as 50% of your insulation. What all this means for you is more insulation and less weight. Dacron® Hollofil® II also has several advantages over down. It absorbs less than 1% of its weight in water so it will maintain its loft when wet and will dry quickly. Down loses its loft when wet, so it will not keep you warm, and it takes longer to dry. Dacron® Hollofil® II is non-allergenic, and is about half the price of down. In addition, Dacron® Hollofil® II is quite resilient, so it fluffs up fully after being stuffed; it is soft for a comfortable feel, very long lasting, and easy to wash. All things considered, we feel there is no better insulation for sleeping bags than DuPont's Dacron® Hollofil® II.

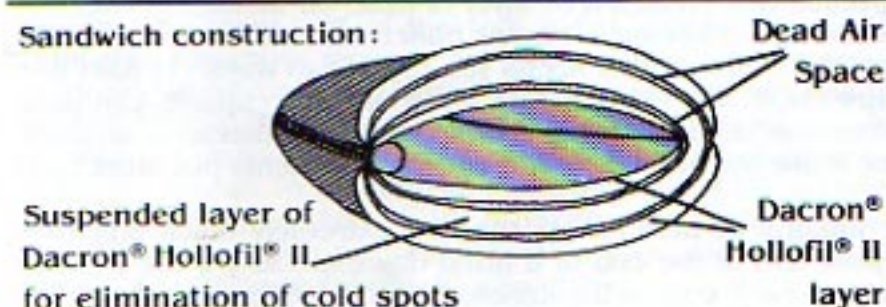

OTHER MATERIALS. The outer shell is 1.9 oz. ripstop nylon, chosen for its lightness and tear resistance, while the inner shell is Antron® nylon for a soft cottonlike feel. A #8 two-way separating YKK nylon coil zipper allows temperature control the entire length of the bag.

SIZING. Cannondale sleeping bags come in two sizes. The regular length fits people up to 6' tall, while the long size fits people to 6'6".

ZIPPER SIDE. When you buy a Cannondale sleeping bag you have a choice of right or left zippers. Generally, a right-handed person likes a left zipping bag and vice versa, but this is a personal choice. Sleeping bags with opposite zippers can be zipped together to provide a double sleeping bag.

*Of course the insulation between you and the ground will be compressed. Using a foam pad will add comfort and warmth to your sleep and will help you get the most from your sleeping bag.

 Price: \$35.00

Your pet, whether a pooch or a Persian, will positively pant – not piddle – when perched primly upon this perfect pet pillow.

I've been using Cannondale tents for eight years now and am still as impressed as ever. In the past I've raved about your tents because of their ease of set-up, weather-proofing, sensible design, and awesome strength. But I've never had the opportunity to put a tent to such a sustained test as the 1982 Hood River expedition provided. We encountered two major polar gales—one which thrashed us with winds to 55 mph for 48 hours straight. A week later we experienced winds of 40-45 mph coupled with heavy rains. Lesser tents would have simply come apart at the seams, or at best, suffered bent poles from the pounding. We didn't experience a single problem.

I urge anyone who is really serious about challenging the still remaining wild places that are left to look hard at Cannondale tents. They have no frills to lure you, no cutesy items. They're just solidly and intelligently built and most important, they are absolutely reliable. They won't let you down in the most extreme conditions. I consider them the best tents in the world at any price.

Cliff Jacobson Freelance Outdoor Writer

Tents

A tent is your home in the wilderness. You want it to keep you comfortably warm and dry. Any tent works well in fine weather; the true test comes when the elements turn against you. At Cannondale, we've been making tents for nearly a decade, and unlike other manufacturers, who seem to come out with a new "ultimate" tent every year, we continue to use the same effective design we started with. We know that to be a good wilderness shelter a tent has to do three things extremely well. It must protect you from the elements, set up quickly, and provide you with a comfortable living space. Cannondale tents perform these three functions better than any other tents on the market, and they've been doing so for almost ten years. Here's why.

INTEGRAL FLY. Every Cannondale tent features a unique integral fly that makes our tents extremely weatherproof and easy to erect. The fly—or, more accurately, the water-repellent outer wall—is actually a part of the tent. The support poles go through sleeves sewn into the fly with the breathable interior walls suspended 6" below. With the outer walls extending all the way to the ground, this creates a 6" layer of dead air insulation over the living area of the tent. We call this the "thermos bottle" effect because it helps buffer the exterior temperature so you stay warmer in winter and cooler in summer. This design also keeps you dry in two ways: (1) Rain hits the outer wall and rolls off without touching the inner wall, and (2) moisture given off by occupants can pass through both walls so condensation is kept to a minimum. Because the fly is part of the tent instead of an additional attachment, it helps to shed wind, not capture it like the rainflies on many tents. Our tents put more than mere nylon between you and the harsh elements.

In addition to remarkable weatherproofing, the integral fly also makes the tent extremely quick and easy to set up. You don't need any hassles putting up your tent at the end of a tiring day, especially if the weather is inclement. Our tents set up with just a single stake at each end (extra stakes are provided for added stability in high winds) and once it is up, the tent is completely up. There is no fooling with additional attachments.

VESTIBULES. Every Cannondale tent has a roomy, floorless vestibule at each entrance for additional weather protection and greater living space. Our vestibules are transitional shelters that allow you to get into the tent in a driving rain without getting the sleeping area wet. Try that with a dome tent. There is a full length zipper on each side of the vestibule so you can get in or out from either side. In warm weather, both sides can be unzipped and rolled up to allow free air circulation. The vestibule also provides a large storage space for your gear and muddy boots, leaving the living area free for sleeping. When the weather forces you to spend a day inside the tent, our vestibule gives you the room you need to remain comfortable. For cyclists, a bicycle with its front wheel off will fit nicely into one of our vestibules.

TUB FLOOR. The coated, waterproof nylon tub floor extends 12" up each wall. Seams, which can allow water seepage, are kept to a minimum, while the floor corners, the primary point where other tents leak, are elevated above the ground.

ENTRANCES. In addition to a vestibule, each entrance is protected by a storm door and fine mesh screen. The door is on the inside where it can be raised or lowered with the screen still in place. One set of zippers drops both the screen and the door, while a second drops just the door. This allows you to control ventilation from within the tent without letting in the local mosquitoes.

AERODYNAMIC SHAPE. The sleek aerodynamic shape of Cannondale tents help them withstand winds that would buckle ordinary tents. This design is the result of combining our integral fly and vestibules with a superior catenary cut and tight tailoring. Furthermore, flapping is virtually non-existent providing a quiet night's sleep.

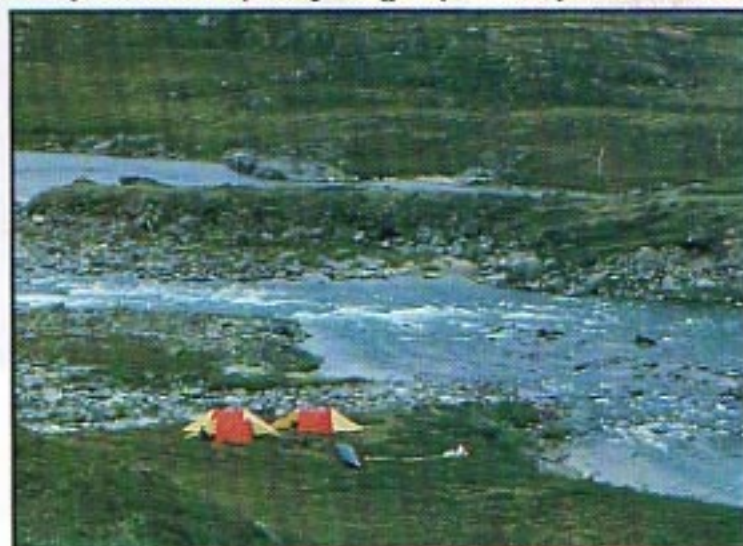

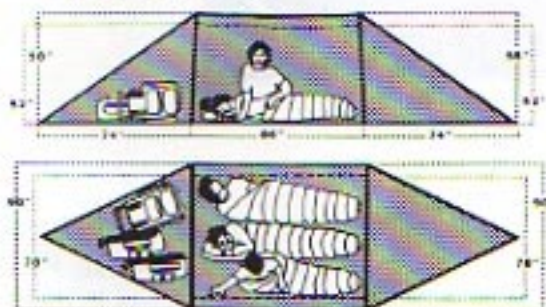

POLE ASSEMBLIES. Our tent pole assemblies are made of aluminum alloy and have a diameter of $\frac{3}{8}$ ". They are shock cord loaded to snap together quickly and easily. The flexible bridge section is natural copolymer polypropylene to maintain strength and pliancy even at extreme temperatures.

MATERIALS. We use urethane coated, 1.9 oz. ripstop nylon in our floors, window canopies, and vestibules. The outer wall is also 1.9 oz. ripstop but has a light coating that makes it weatherproof while allowing it to breath. The inner wall of the tent is breathable 1.5 oz. ripstop nylon. We use only YKK nylon coil zippers throughout because they are the most reliable zippers anywhere. (A note about nylon: because ultraviolet rays gradually weaken nylon, it is best to avoid unnecessary and prolonged exposure to direct sunlight.)

WORKMANSHIP. To ensure strength and durability we lap-fell and double-stitch all our seams. We use eight stitches per inch – fewer stitches are not strong enough, more weaken the tent fabric – sewn with cotton-wrapped polyester thread. In addition to its strength, this thread will swell when wet to help seal seams. (Anytime you pierce a waterproof fabric with a needle, you make a hole that may permit water to come in. We provide a tube of seam sealer with each tent so you can be sure the seams remain watertight.) All stress areas are reinforced with webbing or bartack stitching.

Take a closer look at Cannondale tents because the success of your next trip may hinge upon the performance of your tent. Cannondale tents are proven performers.
