cannondale

## Quality standards as rigid as our frames.

All our bicycles are handmade at our factory in Bedford, Pennsylvania. Though each is designed with computer aided design technology, they're still handcrafted under timeless principles of accuracy and precision.

Every bike is hand welded, finished, and painted with an eye for detail. Then they're scrutinized, tested, and approved by serious cyclists like yourselves.

See for yourself. American technology, pride and craftsmanship shine through every Cannondale bicycle.

## The fastest forward motion available on two wheels.

What makes a Cannondale feel like a Cannondale?

The answer is actually pretty simple. A bike frame is a medium through which your leg energy travels. When a frame flexes, that energy is dissipated. Wasted. When it's rigid, all the energy you produce is transferred directly to the rear wheel.

The net result is faster, more efficient forward motion.

A Cannondale frame is the stiffest production frame you can buy. Which is one reason why it's also the fastest.

## So rigid, yet so light.

It's also one of the lightest—another key ingredient in high-performance cycling.

We do it with our large-diameter, heat-treated aluminum tubing. A fat steel tube could be just as stiff, but it would weigh a ton (or at least feel like a ton). On the other hand, small-diameter aluminum, though incredibly light, just doesn't provide the needed rigidity.

But our large-diameter tubes are not only super-stiff, they're super light. And a few other things we're about to tell you about.

## Stronger than you'll ever need.

Our large-diameter tubes also provide ample strength. In fact, there is no bicycle stronger than a Cannondale. So as long as you ride, the only thing you'll need to think about is stiffness. And as you know, Cannondale has the stiffness you need for an efficient transfer of energy.

For that high performance ride.

Like we said before. It's what a Cannondale is all about. Quickness. Agility. Responsiveness. And raw speed.

## Why the stiffest competitor will give you the smoothest ride.

Aluminum has another quality that makes it an ideal frame-building material.

Because of its lower density, it's a natural shock absorber. So even our large-diameter tubing transmits less road shock than less rigid steel tubing.

It's another reason why your Cannondale bike seems to hug the road. And smooth out the bumps that would knock your teeth out on other high-performance bikes. It's why you feel like you have so much more control. With so much less fatigue.

## Cannondale frame geometry. A formula for high-performance.

Cannondale frame geometry is engineered specifically for each bike's intended use. For example, Cannondale racing bikes feature criterium geometry with a shorter wheelbase and a steeper head-tube angle for exhilarating quickness and response.

Our geometry has received rave reviews in "Bicycling" magazine, "Cyclist", and "Bicycle Guide". A single test ride on a Cannondale will show you what these professional cyclists are getting so excited about.

## Every angle's been considered. And a few patented.

All Cannondale bikes feature our patented Optimum Oval (US# 4,513,985) seatstays to increase frame stiffness in the rear triangle. This is accomplished without adding weight to the frame by using the same volume of material in a superior design.

Our offset seat tube (US# 4,605,214) design allows us to shorten the chainstays on Cannondale racing bikes, which tightens the wheelbase and creates a more rigid rear triangle. It also makes the bike stiffer by effectively shortening the down tube.

## No componentry compromises. Period.

The 1988 Cannondale bicycle line features only the premier components from premier component manufacturers. So nothing that goes on a Cannondale bike can compromise the quality and performance we build into our frames.

Even minor parts, some that aren't even shown on component spec sheets, are meticulously selected for specific performance characteristics.

We not only use the components that will get the best out of our frames, we design many of our frames to get the best out of the components.

You can buy the same components on other bikes, but when you test ride a Cannondale, you'll see what we mean by "the perfect marriage of frame and componentry."

*The 1988 bicycle line comes in innovative combinations of colors and graphics that give each Cannondale bike a unique, stylish look.*

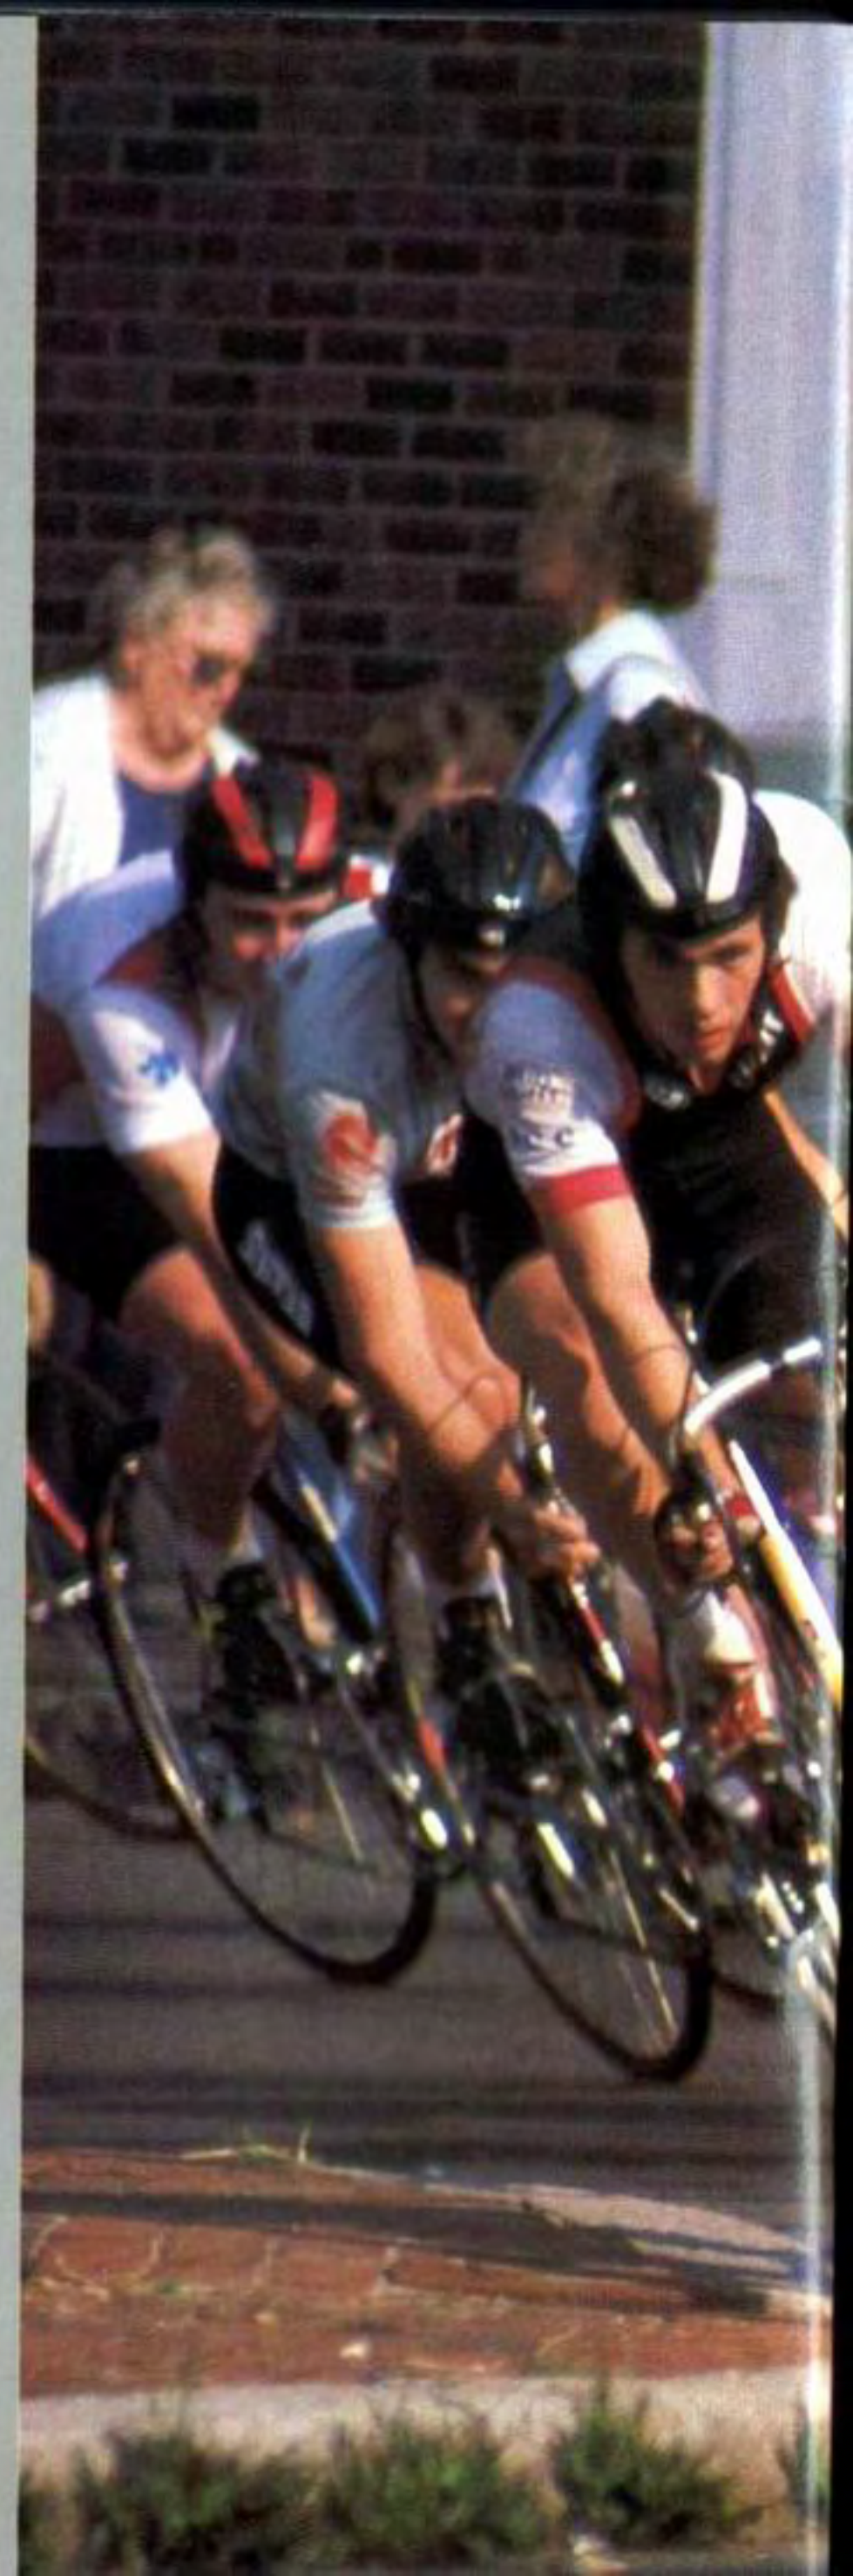

**What's it like to ride the most responsive racing bike in the world?**

Attack a hill. Jump into a sprint. Jam to the finish line. Feel the bike below you respond to your every impulse.

That's what a Cannondale racing bike is really all about.

Quickness. Agility. Responsiveness. Raw speed. And no wasted energy.

It's about the blast of wind in your face as you break off the front of the pack. About feeling exhausted and elated after a tough ride. It's about putting your heart and soul into riding faster than you ever did before.

# SR2000

The ultimate blend of style and technology and the finest racing bicycle you can buy. Seven speed Dura-Ace SIS, Shimano clipless pedals and light tubular wheels.

**cannondale**

*The ST400 is also available in black.*

## **Born to shred.**

Chase the wind on a ride through the woods. Catch some air and live to tell about it. Climb hills you never could before. That's what a Cannondale mountain bike is all about.

Trail riding agility. And fire road speed.

Or cruise swiftly along a quiet country road. Enjoy the crisp air of a sunny autumn day. That's also what a Cannondale mountain bike is all about.

Dirt road rugged. Sunday afternoon comfort.

*Photo Michael Garff*
